Western Hontana.

HAVE seen nothing concerning Western Montana in I FOREST AND STREAM, and only lately any notes from "the other side of the range." Perhaps a little information, derived from personal observation and the expe riences of others, may not be without interest, as Missoula, being one of the smaller towns, and not on a main line of travel, is seldom visited except on business.

It is situated at the head of a valley, or gulch, some twenty-five miles long by from six to eight wide, sur-rounded by mountains and traversed at the upper part by the Hell Gate and Bitter Root rivers, which, soon uniting, form the Missoula, the waters of which reach the Columbia. The soil of the valley is fertile, although needing irrigation on the higher levels.

The town boasts a bank, several mercantile houses, a flouring mill, half a dozen "saloons," a cleverly edited newspaper, a church, a school-house, and is the county Three and a half miles distant is the military pos of Fort Missoula, garrisoned by four companies of in-fantry. The mode of access is from Ogden, by the Utah and Northern Railroad, thence via Deer Lodge by Gilmer and Salsbury's stages. The "palace jerkies," run by the company on this end of the line, are much admired by all who have experienced their comforts.

The Indian inhabitants of this section-Flatheads and

Pen d'Oreilles, both of which names have no proper significance-are peaceful. Numbers of them, not living at the agency, are engaged in farming and stock-raising They became partly civilized, in the very early days, through the labors of the Catholic missionaries. The st disturbances were from the Nez Percé invasion in 1877, and from a small marauding party of the same tribe year later. Practically there is little or no danger to be anticipated from this source.

This region, as a whole, presents many attractions for he sportsman. In endeavoring to convey a fair idea of the extent of our hunting and fishing, there is, perhaps, 10 better way than by referring to the scores which at

virious times have come under my cognizance. The chief game-bird is the sharp-tail grouse, which, in favor-ble years is found in abundance in the brush about the

small water-courses in the early season, and later in the grain fields. Occasionally, as last year, a cold and wet spring greatly reduces their number. Within a few miles, an hour's shooting will ordinarily bing to bag a dozen or more birds. Eighty-two, in a half day's shooting to two guns, has been the largest score.

In the timber, pines and cottonwoods are a reasonable number of ruffed grouse, and on the higher ridges the blue grouse are found. The latter, however, are not sufficiently abundant to pay for the labor of climbing to their resorts. No ptarmigan have, to my knowledge, been shot, but they doubtless exist about many of the higher peaks, several of which in sight are smow-clad the year round. There are no quail in this vicinity, although, from the fact that the Territorial law forbids their destruction for six years from 1879, it is presumable that their introduction has been attempted or contemplated in other sections. Curlew are tolerably abundant in early summer, nesting on the prairie, but except at the time when rearing their young are, from the absence of cover, almost unapproachable. Singe and plover are not abundant. Woodcock are unknown. The wild fowl shooting is not particularly good and does not compare with that on the other side of the range, the great flights passing far to the east and west of us. A dozen or liften ducks to one gun, in a day's shooting in our immediate vicinity, would be beyond the average bag, although much better sport is reported at Flathead Lake and up the Bitter Root. A few ducks and geese breed here.

The unparalleled abundance of large game during the past season has been due to the unusual depth of snow forcing the deer to seek lower levels, so that in localities where ordinarily but two or three could be expected, a dozen would be found. Hunting without snow-shoes was exceedingly laborious, and the kind in favor here is not like the Canadian, finely netted and running over point at the heel. It is, on the contrary, very coarsely worked, with green circle, so

Elk and moose are occasionally shot, but as in winter Elk and moose are occasionally shot, but as in winter the depth of snow makes the carrying of supplies a terrible labor, even with snowshoes, and in autumn the fallen tunber and general ruggedness of the country present great obstacles, it is difficult to penetrate to their rauges. Perhaps a light toboggan that could, loaded, be easily pulled by one man, offers the best solution of the problem.

Mountain shaen are tolerably ulenţiiul, but the amount

Fernaps a light toboggan that could, loaded, be easily pulled by one man, offers the best solution of the problem. Mountain sheep are tolerably plentiful, but the amount of wind and muscle required for their successful pursuit is appalling to any but an old mountainer.

One mountain goat was sent from here in the early winter to the Smithsonian Institution. They are less abundant than the sheep, and even harder to secure. They must be rather are in Eastern collections, for the Smithsonian offered a very handsome price for half a dozen skins and skeletons. Bears are not common, nor are lynx or mountain lions often seen. The buffalo range is reported to have once extended to this region, but since 1833 none have been seen. The visitor of that year was an old bull, and although halied by the Flarheads as the approaching fulfilment of a prophecy that the buffalo would return, seems to have been simply an estray from the main Ferbs. They could never have been very abundant.

Our fishing is excellent, except in the Hell Gate, where it is spoiled by mining operations above. The best is in the So-So, a tributary of the Bitter Root, where the trout run from a half pound up to two and a half pounds. Seventy trout have been caught there with a fly in five hours' fishing, whose total weight was not far from fifty pounds. The length of river fished over did not exceed two miles. The largest trout caught in the Bitter Root weighed about nine pounds, and was landed with a light fly-rod and tackle. Fish of this size are rare, not more than three or four having been caught in this stream in the last two years. The Bitter Root trout take a fly all winter, a black or gray hackle being the most killing. In

Flathead Lake trout have been caught through the ice weighing as high as thirty-five pounds. Ten and twelve pounders are not uncommon. Fish of this size are also found at the mouth of the St. Regis Borgia. Brook trout are abundant in a small stream some ten miles from

The Legislature of Montana, at the last session, approtown.

The Legislature of Montana, at the last session, appropriated a thousand dollars for removing obstructions at the Great Falls of the Upper Columbia, to permit the trunning up of salmon into Montana waters. These falls are in Washington Territory, about ninety miles from Fort Colville, and as they are far from any road or trail, it is difficult to obtain exact information concerning them. In addition to the problem of rendering these falls passable, comes the question as to whether salmon will traverse some two hundred miles of more or less muddly water that intervenes between Lake Pend Orielle and the Bitter Root. Local opinion, based on experiences in the Salmon River country, favors the belief that they will. The nearest waters in which they are now found are those of the Clearwater, over one hundred and twenty-five miles at the least estimate. A donose Creek, one of its tributaries, five Kanakas stored over a thousand pounds of dried salmon for winter cousumption, and caught them at odd times, while not engaged in mining.

ing.
On the North Fork of the Clearwater, a scouling party, short of food, killed a twenty-five pound solmon with rocks, and they are not infrequently, in the mining country of that region, thrown out and killed with suice

try of that region, throw our forks.

Sportsmen's clubs have been recently formed in Missoula and Dell Lodge, for the better enforcement of the game laws, and also for the purpose of procuring such definite information as may be necessary to gain practical good from the above-mentioned appropriation.

NOTES FROM THE CONNECTICUT LAKES

The region of the Connecticut Lakes presents to will, I think, warrant a few notes additional to those already published.

There are three lakes in the chain. First Lake contains large lakers and some speckled trout, is surrounded by woods, except along the southwest shore, and there is a hotel at the outlet. Eastward the Magalloway Mountains lift their magnificent timbered slopes. Last fall the lumber company built a road four miles north to Second Lake—the gem of the chain—doing some lumbering along the outlet, below the lake. The axe must reach its shores in a few years, but for the present season they are safe, and the land-owners say they shall remain intact as long as possible.

ing along the outlet, below the late. The axe must reach its shores in a few years, but for the present season they are safe, and the land-owners say they shall remain intact as long as possible.

Third Lake, five miles beyond, is within the limits of the wilderness, but is too near the French settlements over the line to be a retreat for much large game. Still it is a beautiful piece of trout-haunted water, lying at the very height of land, with the mountains rising abruptly from its clear depths. The Frenchmen fish it, but I doubt if a fly has ever been cust on its surface, and if another summer shall yield the opportunities of the last three, I promise myself to make test for what the clumsy tackle of the Kanucks may have left. This lake is only a mile and a haif long, and its principal inlet, the source of the Connecticut River, is a mere rill, tumbling from the spruce-darkened heights to the west.

But Second Lake!—a name unsuggestive in itself, yet with it come back in memory the scenes of four delightful months of long summer days—days filled with an unforbidden and unnixed pleasure, which in after-thought inspires regret only that it had an end. To us who, nearly four years ago, first pitched our camps by the undisturbed and trout-filled streams, it is known as "The Lake." So to remain, with a charmed memory of days spent in a spot perfect in its wildness. "The Lake!" and inseparable from it in thought is Thomas Chester and his log-camp facing the lake, and the limitless forest eastward. I always rather envied friend C., of Concord, his being the first to stop at the fresh, new camp, but as our trout-seeking trio came only two days later, it was ample compensation to be able to stay a longer time than le. It was then only a year since Uncle Tom had come over from Kataldin, and begun his raid on the heaver. From that time—and at first thought it may seem remarkable—the game, instead of diminishing, has increased. This hactify owing to the fact that the natives from the near settlements keep away, in the that it is useless to trap where Chester does, for there is not another such trapper in the State. Then his camp has in summer been occupied by a few gentlemen who have hunted deer chiefly by the not very destructive method of night floating. The natives, with their nets and other implements infernal, keep aloof to the extent that true sportsmen are present, and together with two or three favorable winters, this has contributed to the in-crease of large game. No dogs are used about the lake— not that Chester has control outside his own came but

however it may be, the neighborhood has proved itself extremely unhealthy for all yelping dogs—so much so that I shouldn't advise one to try the experiment of giving tongue thereabouts for any length of time. Carabou and moose are sometimes driven away for weeks by a short classe from a hound, or even its passage through their "beat." Deer seem less easily fright-

As ensewhere, the chances of the weather are those

for weeks by a short chase from a hound, or even its passage through their beat." Deer seem less easily frightened away.

As resewhere, the chances of the weather are those chiefly involved in the question of success in limiting and fishing at the lower lakes, but the very location which gives these lakes their peculiar beauty, renders them liable to a large rainfall. Lying as they do among the mountains of the water-shed dividing the St. Lawrence waters from those flowing south, they receive many a rain when, thirty miles away, the country is parched. Deer seldom feed in the lake when the woods are dripping, and I doubt not that many a buck owes his continued existence, as an exterminator of his-pads and hunch-grass, to the shower which gave him a supper on the hillside, by providing the moisture he demands with his browse. Like another and more frequently met with species of "back," he has a great distasts for anything like a "dry feed," that being apparently the reason why he resorts to the lake sand streams to feed. Only an afternoon shower is needed to content him with what the woods afford, while in dry weather, as surely as nightfal counces, he makes his way straight past the running brooks to the lake or some sluggish stream, where grows the favorite bunch-grass; even in winth a mouthful of snow goes with each one of browse. There are several leaver-dams not far away to which the deer resort more or less according to season and weather, as well as when much hunded at the lake.

About one of the more remote of these I found the tracks everywhere and numerous last August. For a time the weather had been favorable for identing, and influence and bening that after night Norton had floated up to the deer. They were shot over and brink, dill the mouth was nearly gone, and but three deer and a moose had been brought in. Arriving late in the month, could not dispute the testimony of several shot-scarred trees as to the recent presence of the cause of buck fever, nor could I donbt that the steaks Uncle Ton set b

ripples with no further interruption.

1 was drawning. had prudently disappeared during the excitement, and till darkness stole over the road I sat watching the trout-

and prucently disappeared during the excitement, and till darkness stole over the pool I sat watching the troutripples with no further interruption.

I was dropping askeep in the deer-alarming canvas, when not thirty yards away the spiteful thump of a hoof on the ground, told that the buck had come back to satisfy his curiosity. He must have been standing there quite a while before he stamped. It was too dark to shoot, so I made no move till he caught the scent, delivered another series of angry whistles, and took himself off with leaps that led me hope he would break his neck against a tree in the dark.

About midnight I woka; the beaver were splashing in the water, and up stream something sounded like a deer. A little chilled, I built a wisp of a fire, thereby silencing the beaver, and toasted a bit of pork, as well as my shins, with a sociable owl for company. Later, I had a vague idea of something heavy moving about across the stream, but sleepily decided it was out of reach and entered dreamland again. In the morning the track of a two-year-oil moose established the identity of the night traveler.

traveler.

I had intended to hunt a mile or two up the stream in the early morning, but a marauding and deer-scaring old heron tempted the settlement of old scores and caught a bullet at eighty yards; after which piece of bloodshed, I struck for Chester's.

struck for Chester's.

So passed my last night alone at Second Lake.

In view of the considerable amount of game in these back places, it is remarkable how little they have been disturbed by sportsmen, and even by hunters. Tom Chester on his snowshoes goes about gathering in his crop of beaver and otter, but at that time the other game has left the streams for the hillsides; as for fishing, in the absence of his favorite red squirrel or moose-bird, he may at most catch a trout or two for mink bait. It is only near and on the lake that systematic hunting and fishing have been done at all. About the leads of the streams, however, the trout of course run small, save in the little ponds. however, the little ponds.

liewever, the trout of course run small, save in the little ponds.

From Sec and Lake to Parmacheneo is a fair path on the old supply road, built when lumbering was active on the Magalloway. One can mow drive from Colebrook to the foot of Second Lake in a day, spend the might at Chester's, and by mext noon cross the ten-nile carry, and find himself at Danforth's campon Parmachenee, whence he can go down the Magalloway to the Cupeuptic River and Rangeley chain. Chester can find guides to "tote" baggage. Here let me add my testimony as to Danforth's pluck and energy in overcoming difficulties and opposition as detailed in a recent admirable article on the "Rangeley Circuit." I should advise any one intending to visit second Lake for the first time to write concerning the state of the hunting and fishing, to Thomas Chester, Pittsburg, Coos County, N. H. His statements may be relied upon to the last particular.

The summer season has its uncertainties for the sportsman. To the new comer I would say, do not expect too much. He whose only means of enjoyment in the wilderness are the rifle and rod must take the chances of being disappointed or delighted. Yet, for myself, I ask no higher enjoyment of a few days or weeks vacation than to have contact with Nature at the old lake, going forth day by day from the log camp by the iey spring, and listening by night to the loons and the forest wind.

RANGIFER.

increased over two-thirds each year. Anyone familial with geometrical ratios will understand the inevitable result. In the second year we should find these pests nearly three times as numerous snow, and, with that astounding acceleration of increase characteristic of geometrical progression, they would multiply until in about twelve years we should have the entire State carreted with insects—one to the square inch over our whole territory. I have so arranged this computation as to exclude the insoluble question of the relative values of birds and predaceous or parasitic insects, unless we suppose that birds eat an undue proportion of beneficial species.

Or the question may be locked at in anythment.

Or the question may be looked at in another way. has been computed that the average damage done by insects in Illinois amounts to twenty million dollars annually—a large sum, but representing, after all, only about fifty-six cents per acre. If, in consequence of Prof. Forbes' investigations, the efficiency of the birds as a check on insect life can be increased only one per cent., the saving to the State would amount to sixty-six thousand dollars, or an addition to the permanent wealth of the State of one million five hundred thousand dollars. The figures given in these computations, as Prof. Forbes himself says, are absurdly low, but he prefers to base his estimates on figures that will command universal assent, erpecially since the importance of the subject does not require an exaggeration. The proverbial young robin of Prof. Treadwell required sixty earth-worms daily, and a mocking-bird reared by Mr. Robert Forbes ate two hundred and forty red-legged grasshoppers each day. one who has watched the movements of a pair of old birds with a brood of young, has, we are sure, been as tonished by the amount of food required by the insatiable nestlings.

An interesting feature of the present paper is the teniperateness with which the questions with which it deals are discussed. It has been much the habit to take it for granted, that all insects are noxious; and, therefore, that anything that tends to the destruction of insect life is in so far, a benefit to the agriculturist; but we know that there is a very large class of predatory and parasitic insects which, by preying on others of their class, perform great services for the cultivator. The exact relation of these beneficial to the hurtful insects are not yet clearly known; and this question becomes, as Prof. Forbes suggests, a purely entomological one.

In estimating the services of our insectiverous birds we must credit them with the noxious insects they destroy, and charge them with the useful ones, and also with whatever fruit they may purloin from the gardener. A balance can then be struck between the two sides of the account, and from this a fair reference as to the benefit or injury done by the birds can be drawn.

The species of the Turdulæ examined by Prof. Forbes

these more store were feeding regularly. One or text to make a special part of the control of the stream two or three more stores are more than the stream two or three more stores are more than the stream two or the stream of the stream two or the stream of the stream two or the stream of the stream two or the stream of the stream two or the stream of the stream two or the stream of the stream two or the stream of the stream two or the stream that the stream two or the stream that the stream two or the stream that the st are Turdus migratorius, T. mustelinus, T. pallasii, T. swainsoni and var. alicive, T. fuscescen, Minus poly-glottus and M. carolinensis, and Harporhynchus rufus, We have space only for the conclusions which he draws from his examination of the stomachs of each species. In the robin for the six months, from April to August inclusive, "seventy-eight per cent. of the food was insects, and twenty-eight per cent. fruit, spiders and my-riapods making up the other two per cent." The evident misprint in these figures we cannot locate: but wherever it occurs, the preponderance of insect over vegetable food is not materially altered; and when we note that of the insect food six and one-half per cent, were injurious beetles, eight per cent. Orthoptera (grasshoppers, etc.), and one and one-half per cent, injurious myriapods, we cannot but acknowledge the vast benefit of the

The cat-bird, too, devours, as shown by the present report, a very large number of noxious insects, but it is also true that during June and July he plunders the berry vines most shockingly. But in taking into account his depredations on the garden, it must be remembered that every insect which he takes would, if allowed to propagate its kind produce a horde of young which would do far more injury than a cat-bird would in a whole seas The injury that the bird does stops at the end of the fruit season; that of the insect would increase enor-

Of the brown thrasher, Prof. Forbes says its ordinary services do not entitle it to any special protection. The wood thrush is decidedly useful, destroying great quantities of wire worms and myriapods. It has, according to the writer, about twenty-five cent, to its credit. Of the other species, which occur as migrants, the investigation has perhaps scarcely gone far enough to make it safe to draw any very definite conclusions. Prof. Forbes regards the hermit thrush as a public enemy, because he devours large quantities of useful beetles. But his speci. mens were shot in May, and an investigation later in the season might have developed facts to offset those now

Altogether it appears that further research is necessary before deciding absolutely either in favor of or against the thrush family, in their relations with the farmer. It is evident that they do great good; but is this good overbalanced by the harm which they accomplish? Wa think not; and we shall await with the greatest anxiety

It may perhaps seem ungracious to call attention to defects in a paper so generally excellent and valuable as the one in question, but we cannot help remarking on the careless proof-reading and the numerous typographical errors by which it is marred,

The Diary of A Bird.—Under this title Mr. H. D. Minot has given us what purports to be a translation of the diary of one of our smaller birds, and the production is not only interesting, but has a real raison d'elre. Its author is evidently an ardent lover of Nature and an earnest student. The description of the migration of the little "black-livcated green warbler" from his winter to his summer home, and of his thoughts and comments on the way, is very entertaining. His conversations with his companions, and the birds whom he meets during his peregrinations, are graphic and amusing. But we are especially interested in the mass meeting for the discussion of "The Destruction and Extermination of Birds, How Caused, and How to be Prevented."

in the mass meeting for the dissussion.

In the mass meeting for the dissussion and Extermination of Birds, How Caused, and How to be Prevented."

For soft years the marked decrease in the number of birds of every kind has been a source of deep anxiety to all true lovers of Nature, and Mr. Minot has given forcible utterance to this feeling. Surely hereafter, the hitherto ruthless hand of the "collector" will he sitate before bringing to the ground, simply as an ornament for "ther hat," one of the little warblers who has so touchingly made his appeal to mankind in behalf of himself and triends. So much utterly unnecessary destruction of our common birds is going on all the time, that we shadder at the thought. The absolute shapiter of game birds need not be mentioned; that, unfortunately, is too well known. Mr. Birnof's work is worthy of high praise, as having brought this subject before the public in a novel knd interesting form. The law which he suggests may appear somewhat too stringent, but it is apparent that some great effort must some be nade or we shall lose all appear somewhat too stringent, but it is apparent that foome great effort must soon be made or we shall lose all our birds. We venture to predict that at no very distant day, some measure like that advocated by this writer will be put in force. The figures which Mr. Minot gives of the number of birds killed annually in a single State are absolutely startling. We can only hope that this little book may perform its mission of calling general attention to this wither.

book may perform its mission of calling general attention to this subject.

Hants of the Crow.—Phenieville, Penn., March. 1st.—Editor Forest and Stream:—The articles on "Ravens and Crows," in the issues of the Forest and Stream of February 19th and 26th, have attracted my attention also. While I neither condemn on approve the habits of the crow—having substantial reasons for knowing his true nature—my views do not altogether harmonize with "J. C. B." He's often called "the farmer's friend"—nominally so. As the result of a closed, severe winter, running late in spring, and making food scarce, he gives the farmer trouble by unhilling and taking the corninstead of the cut-worn; also when the corn in the ear is young he is known to strip the husk and eat the milky. corn at the point of the car. Where this is done the ear never develops and matures, as the open husk admits water which moulds the ear, and it dies. Crows undoubtedly take eggs from nests of wood and field birds, if unprotected by the parent bird. Naturally the crow is cowardly. That he should come so near the premises and perch himself on a near tree to await the laying of an egg of a turkey or chicken, and as soon as vacated deliberately approach the nest and "bill" the egg, and "triumphantly" fly away with it, is a circumstance as me as black snakes laying about waters catching fish. To compare the crow with a chicken-hawk! I have yet to see the crow take a young or old donestic fowl, and he has been under my eye all my life time. "J. C. B." says. "these ugly birds have a bad habit of finding unprotected hands on the loosely managed farms in Maryland and Virginia, and pecking the eyes out of them." Astonishing! Dead lambs, I presume. Have any of the mumberless readers of the Forest And Stream of the mumberless readers of the Forest And Stream of the mumberless readers of the Forest And Stream of the mumberless readers of the forest And Stream of the mumberless readers of the forest And Stream of the mumberless readers of the forest And Stream of the

TAILING SKUNKS,—Lebanon, N. H., March 22d.—Editor Forest and Stream.—Reading in your last week's issue of "Awahsoose's" narrow escape, reminded me of an instance much the same, only moore so, that happened when I was present. When a lad of about ten years I was at the house of my aunt, a maiden lady strong of mind and strong of nerve. There was a skunk in the cellar which I had caught in a steel trap, but what puzzled me now was, how to get him out of the cellar. My aunt, however, stepped up, seized him by the tail and commenced ascending the cellar stairs, I following about six stairs behind and wondering how zzy aunt dared to do it, when, without a second's warning, there came what I would have sworn was a streak of lightning, only I never had seen any lightning that smelled as that did; but it struck all the same everything within reach, myself included. Byes, face and mouth—which latter was, of course, open—all of which I did not recover from for some days; but my aunt held fast and carried him out of the house and dropped him into a barrel. Now, I think this story shows two things; first, what kind of a woman my aunt was, second, that it is not always safe to carry skunks by the tail.

Carry skinks by the tail.

Carry skinks by the tail.

Carry of mice, which had established quite a colony in any room, I employed an ingenious frap, which closes he moment any mouse enters its fatal environment. The newildered unimal then seeks for an outlet, which is afforded by a second adjoining apparently open chamber arranged upon the same plain. Thus there is a pantry not which the bait tempted the introder, and a prison lepartment from which there is no escape. Rapid extinction of the nuisance was in the nature of things its sightimate result; and it happened occasionally that two, we even three, victims found themselves entrapped within he course of a few hours. In one instance, to which I wish to draw attention, two were caught, an old one and another two-thirds grown. They were allowed to remain over night in their novel lodgings, and next morning I liscovered only one half of the young animal. The miss-

ing part had been literally devoured by the stronger partner of its mistortanes. Whether this had been under the impulse of rage, or the cravings of hunger, I am unable to say: but if the to the latter cause, it would account for certain limitations upon the increase of this pest, which would angunent otherwise in view of the prolifeness of the species to sufficient numbers to render them even more obnoxious than they really are. Thus far such carnivorous diet has been relegated to the large congener to cat, but it seems to be a typical trait of all Micride as well.

That many of our redents are more on less even income.

That many of our rodents are more or less carnivorous in habit is well known. Coues and others have observed that many of the small rodents of the West feed at certain seasons of the year almost exclusively on grasshoppers, and we have recorded an instance of a Tumius partially devouring a dead Hisperomy,

HABITS OF THE BEAVER.—Bedford, O., March 30th.—I am well acquainted with the habits of the northern beaver. Several years ago I bought up several hundred acres of mining lands near the south shore of Lake Superior. in Ontonagon County, Mich. On Carp River, a small stream that crossed a part of my lands, the beavers had built several dams, and formed extensive ponds, in which they built their houses, or lodges, as the Indians call them. These lodges are built in water several feet in depth, and the entrance is several feet under water, but the floor of the lodge is built at least two feet above high-water mark. The floor is built solid from the bottom of the pond, except the entrance. Although the beaver is the floor of the longe is built as teeds two receivance mon-water mark. The floor is built solid from the bottom of the pond, except the entrance. Although the beaver is warmly clad with long fine fur, he is very sensitive to the cold, and rarely, if ever, leaves the pond or lodge during cold weather. He lays in his winter supply of food, which mainly consists of the bark of a species of poplar. He cuts down small trees and cuts them into food, which mainly consists of the bark of a species of poplar. He cuts down small trees and cuts them into short pieces of one foot, or a little over in length, and takes them into the pond, and fastens one end of these pieces securely in the mud at the bottom of the pond. These pieces securely in the mud at the bottom of the pond. These pieces of wood are dragged up into the lodge, as often as food is needed, and the bark gnawed off; and after being deunded of the bark, they are by no means thrown may as useless, but are taken under the ice, and carefully placed in the dam, to strengthen it. They built one dam a little below the foot of Carp Lake, which raised the lake thirty inches. The lake is a small one—about one mile long and a fourth of a mile wide. I measured the stump of a maple tree that they had cut down, and it measured fourteen inches in diameter. There were no less than eleven dams on the stream, all in sight of our buildings, where we were mining for copper. The beaver possesses great engineering skill, always building his dams in the form of an arch, the crown of the arch being invariably up stream, giving it strength to resist the pressure of the water. The Indians used to tell me many singular traits of character that this animal possesses. They build their dams and lodges of mud, sticks and stones, compactly and very strong. I once saw an ablino beaver skin, I thought, and still think, that it was the purest white 1 ever saw.

RAPID GROWTH OF BROOK TROUT

Manchester, Iowa, April 16th.

Editor Forest and Stream:

MANCHESTER, Iouca, April 16th.

Editor Forest and Stream:

In your issue of Sept., 25th, 1879, I called the attention of the fish culturists to the great growth of brook trout in the spring streams of Delaware County, lowa. I desire to inform you of our further success. It seems to me to be extraordinary.

In June, 1877, the Fish Commissioner, Hon. B. F. Shaw, placed in "Spring Branch," in this county, five thousand brook trout. In March, 1879, the same trout were caught, weighing one and one-quarter pounds, and in August of that year they were caught weighing one and one-quarter pounds, and in August of that year they were caught weighing one and one-quarter pounds. They spawned in November, 1879, and now the stream, which is almost three miles in length, seems to be teening with young trout. You can catch from twenty to one hundred with your hat in the spring. The most of the trout caught now weigh one and a half pounds, and some two pounds.

In March (27), 1879, the Commissioner placed in the hands of the "Delaware County Association for the Protection of Fish and Game," five thousand more, and they are being caught eight inches long. Is this not an extraordinary growth? There seems to be millions of trout, large and small, there now, and it seems as though it would be their home for long years. I am of the opinion this healthy condition is caused by the food. The banks and hottom of the stream is lined with English watercress, which they eat and are very fond of; and it has the same effect on the flavor of the fish as does the weed celery on the canvas backed duck.

On the 14th inst. Commissioner Shaw turned over to the association fifteen thousand brook trout, which were placed in the head waters of the Magnaiketa River, the source of which is on the northern line of the county. It is the most perfect trout country I ever saw anywhere.

sources of which is on the northern line of the county. It is the most perfect trout country I ever saw anywhere. Springs discharging twenty barrels of water in a moment, meandering among rocks and pine timber with pools every few rods, from three to ten feet deep, water as cold as ice. This forms the source of the Magnaketa River, which flows southward through the county, and is filled, five miles from the Springs to the Mississippi River, with black bass frequently weighing from five to seven pounds. The club planted the watercress in the streams and springs, and should we meet with such success in the head waters of the Magnaketa as we have in Spring Branch and other streams in the State of the same character, we would have, in four years, the finest trouffishing in the West.

The commission has placed in our county in the past three years fifty thousand trout, and thirty-five thousand

Insing in the West.

The commission has placed in our county in the past three years fifty thousand trout, and thirty-five thousand salmon. The salmon last year were about seven inches long, and we had sport taking them with a fly; but this spring they have all departed. We can't cultivate them

The commission obtains from the shores of the Mississippi in the fall millions of young black bass, wall-eyed pike, crappies, and other native fish, and distributes three

millions a year, which greatly increases our supply.

millions a year, which greatly increases our supply. The Fish and Game Association consists of most of the generous, game-loving men of the county. The President, S. A. Vananda: Secretary, Ed. P. Seedes, and Treasurer N. W. Clark, are enforcing the close season in all the streams and ponds, and our dame on the Magnaketa alone consist of more than a hundred acres, filled with black bass, weighing from one to sixty pounds.

Our Legislature, last session, made a fishery law similar to the fish law of Virginia. only more severe. Some of the provisions are:—That all who obstruct any stream or lake shall erect a fishway, to be in accordance with the instructions of the Fish Commission; the Board of Supervisors are to see it enforced, and failing so to do, shall be liable to a fine of fifty dollars each; the properly to pay all expenses of the fishway, and double damages if not built; no person allowed to catch or kill a fish within one hundred yards of a dam, under heavy penaltics and imprisonment. imprisonment.

prisonment, The fishmen and game protectionists here never had so a a show before, and if we do not succeed here it is so your fault. S. G. VANANDA. fine a show

-Latest advices from Berlin report the American representatives very busy getting their exhibit into shape. The trout eggs sent by James Annin, Jr., of Calcdonia. N. Y., in care of Mr. Fred Mather, arrived in excellent condition. Three thousand of these go as a present to the Deutsche Fischerei Verein.

> Sea and River Hishing. FISH IN SEASON IN APRIL.

Speckled Trout, Salvelinus fontinalis; Land-locked Salmon Salmo gloveri; Smelts.

-Now that the fishing season has fairly opened, we invite correspondence from the great body of anglers throughout the country. Fresh, crisp items of angling news, notes of fishing excursions, and extended accounts of angling trips are all in order. We mean to make this column a live one, and to that end invite the cooperation of our friends and correspondents. Variety is the spice of a newspaper's life; the more the merrier. In addition to notes of personal experience, we are always glad to receive such information as is indicated by the following hints. We, in turn, by publishing here, benefit the whole fraternity of sportsmen:

What kind of game-fish is found in your own or adjacent neigh-orbood? Average size and weight? Hentfest weights this sea-on? Ordinary mode of capture, and kind of bait used? Any improvements made in stocking pends and streams, build-

ing fish-ways, or daws, or establishing hatching-houses?

Increase or decrease of fish over previous years, in neighbor

hood?
Any local laws governing trespass? Meution good fishing localities, if not conflicting with private interests? How accessible
from nearest railway station? Any hotel accommodations?
How many anglers on lake or stream this season? Notable per-

sons, if any?

CANADA.—Buckingham, Quebec, April 21st.—The ico will soon be out of the lakes back of here; then the sport can begin, for the brook trout are ever on the feed where they are seldom disturbed. Sportsmen who wish to get back away from civilization would do well to come here, as this is one of the best cutrances into the great untracked northern wilderness. Mine host, Mr. Lynch, of the Montreal House here, is well posted and charges light. Hotel Fare \$1.00 per day, other charges in proportion. Fare from Montreal here via, Q. M. O. & O. R., return ticket, \$5.10, and 25 cents stage-fare from station to village.

STANSTEAD. in proportion. Fa O. R., return tick station to village. STANSTRAD.

MASSACHUSTITS—New Berlford, April 22d.—During the past week large quantities of herring, shad, scup, tautog and striped lass have been taken in the traps in this vicinity; in fact, the fishing, which usually commences the 10th of May, is this year two weeks earlier. A large part of the herring are used by the fishing smacks as bait for cod and halibut. A few mackerel have also been taken. The trout fishermen have not met with much success, as the brooks he very low. The large ponds between here and Fall River are nearly three feet lower than ever known at this time of year.

CONCHA. CONCHA

Omo—Oxford, April 22d.—Black bass in Four Mile are not as plenty as they were last year at this time.

M. S. I.

**Colors of Perci And Habits of Bass.—Savanach, Tean., April 13th.—I wish to communicate to your columns a few facts that have come under my observation, and have puzzled me somewhat to account for. The first of these are some things thave noticed about the color of fish, I have caught several fish of the perch species, of a variety known throughout the South as black perch, or goggle-eye, which when first taken from the water were almost entirely yellow, showing only a few black spots near and upon the dorsal fin. After these fish had been strung for a few moments, the black stripes, as prominent in this variety, would appear strongly marked. At first slight, this would appear to be due to bringing the fish more directly under the influence of the sun's rays, but as if in disproof of this theory comes another fact. In fishing under a mill-dam near this place I have taken perch and bass alhormally dark colored, but when these have been on the string a short time they fade, and soon become but little darker than their neighbors. These two contradictory effects can hardly be attributed to the action of the sum's rays, a have met others who have observed the same things, but none of them could give any explanation of the phenomenon.

Another matter, of which I wish to speak, relates to

nomenon.

Another matter, of which I wish to speak, relates to the habits of bass in ponds. We have here many ponds left by the streams changing their beds. These are generally in a horse-shoe form, and in many instances are at the foot of the hills, where they are often fed by springs. Most of these ponds communicate with the original teams during high water, and are well-stocked with bass

and perch. In the parent streams these fish are bold biters, but in the ponds they never take a hook. I have ried them with all kinds of bait, and with the thy, but to no purpose. They do not seem wild, simply indifferent. These same ponds contain a worthless variety of catifalt, which at times will bite revenously at any bait. I have known of repeated and streamous efforts having been made by others beside myself to induce the bass and perch of these ponds to take the hook, but altogether without success.

without success.

These are the facts in the case. Cannot some follower of the angle give us a solution of the difficulties they present?

WILL.

PLASHING FLY-RoDS.—We notice that F-Srest AND STREAM, of New York, has taken up this flashing subject, and thinks it deserves attention. One correspondent of that capital paper says his experience is, that if the angler keeps out of sight, no amount of flashing will soare the fish, and we incline to agree with him, for this reason: We have repeatedly caught trout, chub and grayling during a thunderstorm, and when flashes of lightning have been vivid and frequent; in fact, we remember once fishing in the Rye, above Hawnby, during one of the most terrific thunderstorms we have ever seen either in this country or abroad, the flashes of lightning, frequently forked, were almost incessant, and we several times struck fish, the rise of which a flash had enabled us to detect, for the stream was so shaded by trees in many places, and the black clouds overhead made things so dark, it was a difficult matter to detect a rise. Now, if trout are not frightened by such terrific lightning, to say nothing of the thunder, which seemed to shake the hills, is it likely the flash of a fly-rod will scare them? The flashing of a light at night attracts fish, as salmon poachers well know.—Fishing Gazette.

Fishing and poschers well know.—Fishing Gazette.

Fishing and the Sun-Spots.—In the last number of Nordishe Tidsskrift for Fisheri, the Swedish ichthyologist, Dr. Ljungman, gives an interesting account of the connection which exists between the wanderings of the herring and the recurrence of the sun-spots. To the Scandinavian people, the herring fishery in the fjords and along the coast is a principal source of wealth, and set his industry formerly was a royal monopoly, and often played a prominent part in the foreign policy of the Kings, the State archives contain very minute statistics of its yield, as far back as the beginning of the four-teenth century. An examination of these statistics shows that there rules a certain periodicity in the herring harvest, and Dr. Ljungman has now demonstrated that the regular decrease and increase correspond exactly to the periods of the sun-spots: not only to the great period of lifty-five and a half years, but also to the minor ones of eleven years. The herrings go and come with the sun-spots. The explanation which the Doctor offers, of the connection between these two so different phenomena is is as yet a mere hypothesis, but it sounds quite probable. On the one hand, scientists have established beyond doubt that there is a connection between the sun-spots and certain terrestrial agencies, as for instance, the magnetic currents. On the other hand, fishermen know that there is a connection between certain meteorological phenomena and the success or failure of their craft. Thus, when the mackerel cloud appears as above, the mackerel fish is sure to be found beneath. Dr. Ljungman's hypothesis now is that the sun-spots cause a change in the currents of the sea, by which the food on which the herring feeds is carried now to this place, and now to that.—New York Times.

LOOK SHARP.

BEAVERELL CLUB, April 17th.

Editor Forest and Stream :-

Now that the effect of our friend Hallock's mischievous bas Now that the effect of our fitend Hallock's mischlevous base-ball joke, about rout knocking fleis fint their mouths with their talls, has somewhat worn off, let me ask fly-ishermen to observe during the present ecson that trout often (not always) strike at the fly with their talls. Close observers will occasionally see a trout come out of the water, and hit with its tail a natural fly, striking it down to the surface; the trout will then drop into the water head first, turn, come up and cut the fly. Probably builfshermen will laugh at this; that is where most of the laughter came from before when this ; they is where most of the laughter came from before when this ; they is where most of the laughter was one gentleman who claimed to be a fly-isherman, who said that trout move so fast that he could not see quickly enough to was one gentieman who claime to be a ny-issuriman, who saw that trout moves of fast that he could not see quickly enough to see one of them come out of a how water, turn over and go back. Probably that gentieman is a novice, or elso "gun-shy" with his trout-rod, i. c., shuts his eyes and gives a jerk at the rod when his fly touches the water, just as womm does when she pulls the ny toucnes the where, just as a woman foce whell she puls the trigger of a gan. After a man has used his eyes for twenty years, or even less, in the wild woods, and on mountain streams, his eyes get so that they see distinctly many things, paths without a trace, plandows, motions—

"With here a blossom sailing, And here and there a lusty trout, And here and there a grayling. And here and there a foamy flako

With many a silvery waterbreak [27] Above the golden gravel,"

to all of which he was blind when he first began to hold communion with nature. A number of fig-fishermen have agreed with me as to having seen trout strike with their tails at flies out of me as to making seen that the state of the water, and I hope to have many gentlemen confirm our experience, in your columns, this year.

Happy the man who is so familiar with nature that he can say, with the old Massachusetts poet, Jones Very:—

The old Massichuserts poet John of the p when I come by,
Because my feet find measure with its call;
The flower that on the lonely hillside grows
Expecis me there, when spring its bloom hath given;
And many a tree and bush my wandering knows,
And e'en the clouds and silent stars of beaven."

GEO. W. VAN SICLEN.

The Rennel.

SOMETHING ABOUT BREAKERS AND DOG BREAKING

FOURTH PAPER.

THERE is an old saying that " you may take a horse to water, but you cannot make him drink," and it can equally well be said that you may take your dog to a snipe meadow, but you cannot make him hunt. Should it be your misfortune to have selected such a one, and at the outset of your practical tuition find that you have been mistaken in your preliminary tests-discard the dog at once, for he is unworthy of your time and trouble. It is usually only in the field, and in front of the gun, that the dog's "true inwardness" can be ciphered out, as oftentimes all previous calculations go for naught. He must have snap and bottom, pluck and go, no fear to face the briers or wet his feet—no shirker of his duty or waster of your time; for even if you perambulate on crutches, as pictured by John Leach, avoid a pottering As young dogs, however, are liable to tire out, particularly when first handled on rough or miry ground with which they are unaccustomed, common sense would teach us that the youngster should be in the best of trim when first brought face to face with the fortunes of the field and flood. It is necessary that his first acquaintance with game should leave a pleasant remembrance; therefore, beware in the excitement of the glorious sport, of

ore beware in the excitement of the glorious sport, of overtaxing the strength of your puppy by shooting over too long a beat, or by working him all day, as if he were an old field dog. Remember, he really must not be taken home tired, so that he is untit to take the field on the succeeding day; but rather call him in to luel after a few hours of successful work. Constant fatigue will take the snap out of any young dog, and he will in time fall into a listless and careless way of uoing his work. It is overwork, when young, that causes us to see so many "one-hour dogs" in the field at the present time.

Of the many ways to condition a dog, the best, perhaps, is the daily exercise which can be given him on a smooth hill-side, in making-dim retrieve a ball which is rolled swiftly towards the bottom. It was partly with this exercise in view that we argued in a previous paper that all young dogs should be taught to retrieve. An hour or two of this play every day will harden like iron the muscles of any dog; give spring to his legsand strength to his back, expand his chest, and give him plenty of wind—a very essential requisite—the cultivation of which does not receive the proper attention. We do not believe in exercising a sporting dog by making him jump for a ball suspended out of reach, as it is a performance that may perhaps in the field lead to attempts to catch at low-thying game.

Another method which is commonly used to keep a

low-flying game.

Another method which is commonly used to keep a

for a ball suspended out of reach, as it is a performance that may perhaps in the field lead to attempts to catch at low-dying game.

Another method which is commonly used to keep a dog in trim is to allow him to run with a wagon. When this is done he should in all cases be trained to run on well ahead, and not bethind, as the dust and dirt stirred up will choke him and frequently injure his eyes. We do not altogether believe in this practice, for in a long drive a dog has hard work to keep up with a fast horse, and should he, when tired, be litted into the wagon in an overheated state, he is almost sure to catch cold. No dog should ever be allowed to jump into a wagon, for fear of a strain. But as any exercise is better than none at all, be careful to let your dog run on in front; he will then be in continual sight, and you can see in time to protect him from the attacks of way-side dogs. No dog-owner can be too observant of the actions of his animal at all times, as the dog's good health and worth as a well broken and well behaved dog depend upon the master's intelligence and constant care.

It has been our experience to find that the best dogs are broken upon English snipe, which we would not have too tame or lazy. The snipe meadow is in our opinion the very place to give them the benefit of your own experience and that of a good old steady dog, with whom you should, if possible, work them in company. But remember, at the same time, that they had much better be tworked alone than to be subjected to an evil example. Old dogs are up to every artful maneuver. Game cannot beat them in cunning, and they are more than a match for it. Therefore, let their labor at first be shared with a steady companion, for there is nothing better for a young dog than being worked with a first-class old one. Continued work will bring down their too archert spirits; and, for animals of this kind, nothing else will prove really henchicial. Be sure and pick out a warm spring day—the ice should be gone, and the wind blowing gently fro

cross yourself, that you may be at hand to assist him should be chance to catch. In many sections of our western country the post and rail fences are built six or seven feet in height, so that a dog in attempting to jump them frequently has a rough fall backwards, or is occasinally left hanging by the legs. Let, therefore, your dog accustom himself not to rush at his fences, but to take them quietly, and you will have more go left in him at the end of a week than the one who has no regard for these precautions.

The frequent difficulty to get on the snipe meadows, as the crossing logs are few and far between, and the constant shifting of the wind during many of our spring days, does not warrant the loss of time and trouble to go far out of one's way to get to the extreme leeward side of the tract. But despite of the theory of beating for snipe "down wind," originally advanced by Herbert, and now carried out by many of his disciples, we most earnestly advocate beating for all game, when it is possible, exactly the other way—that is, "up wind," True it is that snipe, and, in fact, all water fowl, rise to the wind, yet it is absurd to expect dogs to do other than flush the game if they bear down on it with the breeze, and alarm the birds with their splashings away to windward. If your dog has a fair nose he will soon be brought to stop at a distance that will not flush the birds, and you can either pass him and move the game yourself, or by making a slight detour soon locate the birds between yourself and the dog. This is an excellent plan when they lay badly, as it usually affords a reasonably fair shot. On the principle that paper kites are used on the Scotch moors to make the grouse lay, we have heard from good authority that a light-colored felt hat sent skimming through the air would make wild snipe lay. We do not, however, place any particular faith in the performance, and have thus far preferred to keep our hat dry and upon our head. One thing, however, is certain, that the best find on a snipe meadow is on

him.
Should your beat lead you among briers, through which your puppy is at first unwilling to crawl, toss a biscuit well in, and point out to him the thinnest entrance to the thicket. Encourage him freely, but on no account push him in. If hungry he will soon find a way to rench it. This will be his reward for the few scratches, which you would have him at once lorget. Neither push nor throw him into the water, should he show a dislike to enter. Rather, on a warm day throw some biscuit that will float close to the edge of the bank, where it is so shallow as merely to require his walling. Chuck the next piece a little further off, and by degrees increase the distance until he gets beyond his depth, and finds that nature has given him useful swimning powers. On no occasion will the example of another dog more assist you. Shun any that may induce the youngster to dive; it can never be of service, besides it is apt to cause premature deafness.

Having thus summed up how to ward against several of the most common accidents incident to the field, and also told you how to get your puppy into condition for it, we consider that if you follow out the following systematized programme of instruction, which covers four important points, it will be all that is absolutely necessary:—

To beat, that is, to have the dog range properly and Should your beat lead you among briers, through which

portant points, it was to be a considered as a properly and methodically beat out the ground, so as to avoid leaving birds behind unnoticed.

To draw, that is, when the dog feels a scent, to at once proceed in the direction in which he may believe the game to lie, and in so careful a manner locate the game as to direct the sportsman to it without disturbing it.

To point, that is, for your dog to stand immovable the instant that the scent of the game is felt with certainty

as to direct the sportsman to it without disturbing it. To point, that is, for your dog to stand immovable the instant that the scent of the game is felt with certainty.

To back, that is, to have your dog stop the moment he sees another dog point or back.

From what we have already written, it will be surmised that we advocate the breaking of puppies to game with the gun; although this is a desperate point, we believe that they should be rewarded for their exertions by having it killed over them. The shooter, however, should till nothing but game birds over any pointer or setter, or the dog will never learn his business. He should avoid above all things, shooting at rabbits, rail, larks and all small birds, is a walking satire on the sportsman. True, he generally has his "hunting-cap" decked out with chippy-bird or blue-jay feathers; but aside from this, he can always be distinguished from the action of his dog, for should a crow come flying across the meadow the dog will stand excitedly watching him until he is out of sight—they making an interesting picture, these three in which the carrion bird, in our mind, has rather the best of it. When the gunner is in the habit of killing small birds, and at other times correcting him for polaring them, is it astonishing that the dog becomes confused and is puzzled when he comes to a sulpe whether to point it or not? We have read a great deal that he head, and simply wondered at the reliable sporting public. The laughable theories of hiding qualt under little taskets, rather reminds one of the East Indian juggling trick of "Now you see it, and now you don't." Also permitting the birds to fly a few yards by having strings tied to their legs, and other pantominic tricks, is impressive no doubt, but not apt to bring a dog to the proper standard of what a pointer or setter should be. Of course, by severity a dog can be taught to never do wron; but his spirit will be broken, and he will do his mechanical work with no enjoyment or zet for the sport, without which he is not w

the lesson in retrieving he has learned to connect the motion of your hand, when tossing the hall or glove, with the direction in which he is to search. You will therefore have but little difficulty in making him understand that a wave of the right arm and hand to the right, is for him to hunt to the right; and that a corresponding wave of the left arm and hand to the left, will explain to him that he is to hunt to the left. Should he at first be unwilling to do as you command, unless he sees something thrown, you can occasionally tosa a piece of bread into the grass in the direction you wish him to take, and waving your hand at the same time, will aid in making him comprehend the signal. Your aim is that no part of your beat shall remain unhunted, and that no part once commanded by his nose should again be worked over. As the greater part of the best 'American shooting is done in large tracts of prairie and in uninclosed country, it will be well at first to teach your dog at no time to range over sixty yards from you. To accomplish this, begin by waving him off to the right hand, and when the proper distance is reached, call his attention with the low whistle you have adopted, and at once wave him to the left hand, regulating your position so as to have him cross about twenty yards in front of you, so that he may understand from the beginning that he is not to cross behind you, out of your sight. When he has proceeded about sixty yards away on the extreme left, again call his attention and wave him back to the right. Continue its zig-zag system of having him beat diagonally across you will great exactheses, and it will not be long before our dog will turn his lead at the limit of his range without waiting for the expected whistle; and later on, ne will fall into the habit of ranging across you wish, cou may follow him a sufficient distance every time that he crosses to the right and left sides, and soon he will correctly gauge the extreme limits of his range. Avoid whistling as much as possible during his earl the lesson in retrieving he has learned to connect the

MR. TILDEN'S PETS.—To the Editor of the Sun—Sir:
The passer-by in East Nineteenth street, near Irving place, can see, in the handsome rear of ex-Gov. Tilden's bouse, two valuable dogs—a large true-blooded St. Berbard, and a stately, dignified English mastiffs, in their oburing a very scarce. They resemble the bull-dog in a blead of rare beauty. The English mastiffs, in their oburing and strength, but are more faithful and affectionate. They tolerate no undue familiarity, and are langerous enomies. If appearances are indicative, Mr. dilden must be very fond of his dogs, for he is often seen neeting them on his lawn, and showing them to his friends. The affection is reciprocal. "Leo," the St. Berhard, is overwhelming in his affection, and "Punch," he mastiff, receives advances with satisfaction and a most becoming gravity. They are a source of interest to the neighborhood and the passing public, who have gearned their names and peer at them through the slight from paling that separates the Governor's beautiful crounds from the street. It is no uncommon sight to see the Tilden's lunge bay window of his chrary (from which all occupants are visible,) surrounded the street. The surrounded the street of the street is no uncommon sight to see the Tilden's lunge bay window of his chrary (from which all occupants are visible,) surrounded the street is that his low voice has become chronic, making that separate in her arms her only dog, a tiny but of fears all that his low voice has become chronic, making that surrounded the statement of the first of the dogs, and seeing are rough and tumble of their frolics with their master. It is on the general rule.—Neighbon, in New York Sur.

The New York Dog Snow.—The falling of the new

THE NEW YORK DOG Snow .- The falling of the new ldition of the Madison Square Garden, on the evening of pril 21st, whereby Mr. Wm. M. Tileston, late Kennel ditor of Forest and Stream, and chairman of the con-ittee of arrangements, lost his life, caused the show, hich was to be held under the auspices of the Westinster Kennel Club, on the 27th, 28th and 29th, to be lavoidably postponed, as has been already noticed by e press of the country, until the 11th, 12th and 13th of y. It is even now impossible to state, until after the roner's inquest, which is now being held, whether the hibition will be held in the Garden, or at some other avenient place. If, however, it is deemed prudent and e by the Westminster Club to make no change in the ation, the space to be occupied by stalls for dogs will Il be within the main building, and entirely removed on the section where the sad calamity occurred. As responsibility of this shocking affair is shared beilding Department of this city, no further dependence a be placed on any subsequent report of inspection or urity made by these incompetent and criminally negent set of persons. It therefore behooves the managers see for themselves that the proper precautions are on to guard the community from further accident. r. Gordon Stables, R. N., and Mr. Hugh Dalziel, of

London Field, who are to act as judges at the coming ch show in this city, arrived on the City of Brussels Saturday morning, and called at this office in the rnoon. Although at first expressing some doubt as whether their engagements in England would allow n to remain in this country long enough to be present the bench show, which has been postponed, they have a decided to remain as guests of the Westminster unel Club.

r. Stables cleared out most of his dogs before starting 10 was unable from the press of emigration to ship He has still on hand, however, in England, chambred colley pups, beagles, dachshunde, mastiffs, setters, and other sporting and non-sporting dogs, and will be happy to give any information regarding importation of dogs to any one interested. He may be addressed at this office.

tation of dogs to any one interested. He may be addressed at this office.

An Abuse at Dog Shows.—London, Ont., April 16th.—Now that dog shows are all the rage, I wish to bring before the public a danger that is run by owners of valuable breeding stock. I dare say my experience may not be singular, but as it has not been brought out in any of the journals devoted to the kennel, I take the liberty of writing you on the subject.

I sent my Gordon setter, Blosson, to the late Montreal show, by express, and was awarded two prizes on him. Of course I was flattered, as are all exhibitors who take firsts or specials, but my joy was turned into—(what the proper word is I cau't just express), when a month or two afterward I am informed, from several reliable sources, that my dog's services were used, without my consent, by a Montreal gentleman, also an exhibitor and prize taker, and that he is now trying to sell pups by my dog.

It seems strange that a gentleman would do such a thing, but that he should openly advertise that he had done so is stranger still. As it stands now it is impossible to bring him to justice for the theft of the service, yet I wish to caution managers of bench shows that if such things happen, their shows will not be attended by breeders at a distance, whose stock is valuable. They ought to be most carreful in the selection of their carctakers, and take none but those on whom they can rely for honesty, both to themselves and exhibitors whose property they guard. That brother sportsmen and breeders should take such advantages is to be condemned, and brings dog-breeding into disgrace.

J. S. Nevin.

MR. A. H. MOORE'S KENNELS

property they greath. Amounts of the state o

communication, which is good as far as it goes, yet its failure to mention many of the crack dogs of Mr. Moore's kennels, will lead us, later on, to give a complete description of what is now regarded as one of the most re-markably fine and interesting collections of stock in

KENNEL NOTES.

NAMES CLAIMED.—Tipporary Girl and Lady.—Mr. Max Wenzel, of Hoboken, N. J., claims the names of Tipporary Girl and Lady for his two red Irish setter pupples, eight months eld, by Lincola & Hellyar's Arlington, out of owner's Dee.

Permucal—Dr. C. E. Wing, of Boston, Mass., claims the name of Damural for his liver and white pointer bitch by Samural, Glen-Blosson, out of Wavins. Somet Ledie.

Blossom, out of Fannie, Sport-Lady.

CHANGE OF NAME.-Victoria to Victress.-Peekskill, N. Y., April 22th.—Owing to priority of claim in favor of Messrs. Cummings & Son, I desire to change the name of my black and tan Burdett cocker spaniel Victoria, whelped Nov. 23d. 1878, to that of Victress.

Miss JULIA WYGANT.

PRESENTATION.—Plunket—I ampleased to acknowlege a present of the red Irish setter pup Plunket from Dr. Judkins, of Highland County, Ohlo. The puppy is the finest dog we have here, and his name shows what stock he is from. The Doctor has the thanks of myself and of the sportsmen here. M. S. IRELAND.

SALES.—Mr. N. Elmore, of Granby, Coun., has just purchased from Mr. J. N. Dodge, of Detroit, Mich., a beagle dog puppy, Rattler-True, three months old.

DEATH OF MR. HUNLER'S PINTO.—Tendily, N. J., April 22d.—Doubtless many New York readers of Forest and Stream will be sorry to bear of the death of Mr. A. J. Huyler's setter dog Pinto. He was bitten by a rabid dog on the 13th inst., and Mr. Huyler had him killed on the 17th. Pinto as a field dog had few if any, superiors. He was the pet of all the children. I do not believe there was a person in this place who was not grieved to hear he had met with such a sad fate, and except Mr. Huyler and family, none more so than the writer.

David Hall Rice will offer a fine silver cup as a prize for seamanship this year, the conditions of which will be published in due time. The schooner White Cap i following the fashion, and will have seven tons of iron boiled to her keel, giving the latter more rocker without norcasing her draft. A larger amount of ballast will be removed from inside, to as to lighten her up without sacrificing any of her stability. The value of weight on the keel, and the great influence it exercises upon stability, is rapidly becoming recognized in the East.

YACHT-BUILDING AT BRISTOL.

HE pretty little town of Bristol, R. I., was all expectation THE pretty little town of Bristol, R. I., was all expectation over the launch of a fine new yacht from the yard of the Herreshoff Manufacturing Co., Wednesday, April 21, and from the preity New England "Miss" down to the dust-begrimed mechanic, the inhabitants of the town and surrounding country wended their way towards the scene of the approaching launch. The new steamer is a fine specimen of the genus" high-speed, and was built to the order of Mr. Graham, of Baltimore, being the fourth vessel of the kind the same builders have turned out for him-pretty strong endorsement of their work from the standpoint of practical experience. Frompily at the hour assigned the wedges were knocked up, and with the did of a fack the stemmer was started. As she sid off the ways, little Miss Kitty Herreshoff dashed the proverbial bottle against the bows, and in a happy manner christened the new-born Gleam.

It is unnecessary hers to expatiate upon the stemmer's model. The capacity of the Herreshoffs in this direction is too well-known. They copy no one, take nothing as a sample, but confider

The capacity of the Herreshofts in this direction is too well-known. They copy no one, take nothing as a sample, but condiding the time of the copy of the copy in the copy of

normony to the eye and a serviceable and well arranged design for practical use.
The launch was most successful, and was accomplished with as little fuss and noise as though it were child's play. A pleasant company afterwards tool part in a collation served at the builder's home. As steam yawhits seem to be very popular just now, the following items ecucerning the Olean will be of interest:—
The Olean's length over all is 120ft; beam, 181t; depth, 6ft, Composite bull, schooner rig. Her interior arrangements are admirably contrived and slegantly finished in oak and maple. From the main saicon, 20 feet long, opens a pantry and state-boom, and from the companion-way aft of the saloon a fine double state-

room, occupying the whole width of the vessel; abaft of this spain is a bath and toilet room, with every convenience for comfort. In the saloon the main pieces of turniture, consisting of dining-table and buffet, are of solid mahogany. The upholstery and tapestry will be of the riohest description. Between the saloon and the part of the vessel allotted to machinery is an iron bulkhead, extending from the keel to the upper deck, through which there is no communication whatever. The importance of this barrier to dust and odor from the machinery department, as well as its use in giving strength and stability to the bull cannot be over-estimated. This is one of four complete iron bulkheads in the vessel, all of which are alike, that is to say, there are no openings in them at all. These divide the vessel into five compartments, adding greatly to strength and safety; for in the event of a collision or otherwise, one compartment only could be filled with water, the others being amply sufficient to float the vessel. The machinery occupies a space of about 19 feet. The engines are of the compound condensing type, with cylinders 10; and 18in, diameter and 18in, stroke. The engine is fitted with improved cut-off valves, and has feed and air pumps attached. The boiler is one of the Herreshoff Coff system, which day by day is growing in popular favor. It has a grate of 5ft, sin, in diameter. She will burn 200 lbs. of coal an hour when running at the rate of 10 miles, under which condition matural draft only is used. To reach her maximum sustained speed of 20 miles, a power fan is

reach ner maximum sustained speed of 129 mines, it power that is used to force combustion.

In the issue of FOREST AND STREAM, of March 11th, may be found a description of the Herreshoft safety-coil boiler to which we refer in this connection. Forward of the machinery, and separated from it by one of the bulkheads, is the galley, commodious and well furnished, and next, the pantry, ice-chest, water-closets and large and well-ventilated accommodations for the crew. Her pillot-house is a sample of comfort and elegance, finished in panels of cherry. An elevated seat permits an uninterrupted view of the horizon. The Glean is the first aldnot of several large steam yachts which are to be added to our fleet this season, and although she does not rival some of her companions in size, for speed and general excellence in hull and machinery she will not be second to

The Herreshoff Manufacturing Company have also in hand a small steamer for the Johns Hopkins University, of Baltimore She is to be used by Prof. Brooks, in and about the Chesapeake Bay, in his scientific researches in marine, animal and vegetable life. Her interior is to be finely finished in oak and cherry, and will be furnished with one of the new swinging "tent-awnings," which were described in one of our previous numbers.

while were described in one of our previous numbers.

The Company have just commenced a coaching steamer for the Howard College rowing club. This steamer, presented by the nating gradelass of '80 to the college rowing association," possesses many points of peculiar interest. Length, 40ft.; beam, 54ft. Her nery will consist of a Herreshoff boiler and compound conmachinery will consist of a Herresnon obner and compound con-densing engine of 25-horse power. Maximum speed, fourteen miles an hour. Her scrow is to be placed amidships, similar to the famous torpedo boats built by this Company. She is thus enabled to go as fast astern as ahead, and steer equally well in going either direction, and to turn in a circle whose diameter is three times her length. She can also be brought to a full stop from her highest speed in a space not exceeding half her length Her interior will be handsomely finished in oak, mahogany and cherry. We shall look forward with great pleasure to the perenerry, we sum look forward with great pleasure to the fer-formances of this boat, for the many new features of such craft ought to produce, when desired, higher speed at a less outlay than ever yet accomplished. Engines have been brought to such a high pitch of perfection that it is difficult to see room for much more improvement in anything that is direct acting, and, some-how, rotary engines have not given that satisfaction in practice how, rotary engines have not given that satisfaction in practice which their theoretical points seemed to warrant. One thing is against them, and probably always will be. They use steam at a terrific rate, and this leads us back again to the boiler. The main stumbling block to higher speeds, twenty-five to thirty miles, lies in the difficulty of supplying sufficient steam without increase in weight of holter; in other words, more power for a given displacement. Engines can be built sufficiently light and strong by using the best of steel; they may be turned up over 550 without hearing, and hoilers of the sectional or pipe type can be made to with 18; thu numers of the pressure, but when I coules to many own the standard any amount of pressure, but when I coules to furnishing a great quantity of bigs seam, then they all fall, and with them whistone of thirty miles an hour through the water vanish. From what we have seen of the dependent of his however, there is a possibility of the entitleing them of railroad time in a steam yacht being realized at last, and we only hope some one will give then being remined at the day land we only hope some one will specify a care blanche to do their land we've best. If they cannot succeed in getting between the protected the contract of the fast constitution that is precised the contraction with the fast-est of the fast cones, then it might as well be griefly a process an ampossibility there can be no use straining article and process. We are aware that Lighthus, dilland, Miranda, and a few more, have churned their twenty-one, twenty Marama, and tew more, nary charmon then wenny-one-verty-three, and even twenty-four, over the measured mile; and diland, It must be acknowledged, kept up the pace for a full hour or more; but alas, these were builders' trials, flying light, profes-sional stokers, picked coal, smooth sea, no wind, and no expense spared! As an index of every day performance the measured mile, or builders' trial, is a pleasant piece of deception. A deduction of \$5 per cent. from such flavors brings us nearer the truth, or rather the capacity of the high flyers under normal circumstances. It is under such that the speed of Gleam has been set down as eighteen miles, and the near future will show how near the builders have come to their mark. But will it be long before we are to see some one the possessor of a product of American skill which will reel off twenty-four miles any day in the year, and go which will rect off twenty-four mines any day in the year, and go higher still when pressed? It may not be so impossible as it appears, for we know little of resistance at excessive speed, beyond that its ratio of augmentation sensibly decreases, after twenty miles has been reached. There is room for reasonable experiment and expectation, even far beyond. Why let England take the lead, when we have the falcont our doors?

YACHTING NEWS.

Curyes of Stability.—In an exceedingly interesting and able paper on the "Stability of yachts," read by Mr. Dixon Kenp before the Institution of Naval Architects, March Sink, we are supplied with much more definite information as to the value of lead on the keel in augmenting a vessel's stability. It appears that with inside iron, the Florinda (a yawl 80x19x11, with 150 tons displacement) would have over 35 per cent. Less stability than if supplied with 40 tons lead on the keel up to about twenty decrees of heel. Heyond that the difference shows even move strongly in favor of the lower position of the balbast. In the first case, the yawl, although quite beamy, will reach her maximum statical stability at 38 degrees, and in the other not until beyond 70 degrees. In other words, Florinda, with inside iron, would be an insafe vessel, and might follow the example of the Mohanck, while with a goodly portion of her ballast (she carries 14 tons in all) on the keel, she can b made practically unequivable.

FLAT-RONS AT SEA.—In describing the recent rucing at Nice, France, a writer says, incidentally, of the second day; "As for the shallow, beamy boats, the first pull of wind overpowered them and they were glad enough to run back to harbor for shelter." The English yachts were the only ones that could face the sea, for even the mark boats have up and ent and ran as fast as they know how. This left the yachts to guess at the course, and Getrinete, failing to find any mark, gave up, very properly entering a protest against any prizes being awarded. But so little did the committee in charge seen to know of their business that they nominal management of affairs next year, allve member of the V.R. A. he intrusted with the duties. Some such guarantee is necessary, if the presence of English yachts is desired; without at the did the did the committee of the course of the protect of the transfer of the trans

characteristics and a little better han big prizes. They would prefer smaller prizes and a little better management. CHANGE OF COLORS.—A correspondent sends us the following charges in the club burges and hag officers' swallow-tails of the Buffalo Yacht Club: The former is pointed, blue field, white star in center; width, two-thirds of length. For the Commodore, swallow-tails, blue field, red star in center; Yice-Commodore, field and blue star; Rear-Commodore, plain blue field. The private signals are square, width, two-thirds of length. Sizes of the above to be one finch in length for each foot of yacht's length on deck. We are glad to find this club has adopted square dags for the private signals of its yachts. Others, when making changes, should follow the example set.

THE OCEAN PEARL.—A vessel has been recently launched at Essex to be called the Ocean Pearl. She is 115tl, over all, 112tl, on the line, 16tl. 7in, beam, and 9tl. hold, with about 14tl, draught. She will be half brig rigard, and will make a cruise around the world to demonstrate the value of Norton's patent ship ventilator.

lator.

Buffalo Vacht Club.—Six new members have lately been added to the club. A club-house is in prospect. All the Latke clubs are puling logether in a most commendable why for the common good. Mr. C. P. Kunhardt, of the Forest and Stream, has been appointed delegate to the N. Y. A., in place of Mr. E. E. Benedict. The constitution of the N. Y. A. bas been adopted by the club, and steps are now being taken to have the club incorporated.

Our New Sangrust—Through the kindness of the Herreshoft Manufacturing Company, we have received a handsome line of photos displaying to advantage their engines, yachts and launches, and will go to enrich our collection of yachting exhibits displayed in our new drawing office.

BOUND ABROAD—The well-known cat-boat Georgic, which figured prominently in Newport racing last year, has been shipped to England by Messrs. Auchineloss per Anchor Line steamer Deronia, last Saturday. The Georgic is sent out to Mr. James Conta, Jr., now of Paisley, Eng., and will be salled against the Clyde cutters and lur sails. Her chances a short time ago would larve been better than they are to-day, for the Clyde clubs have recently adopted the Y. R. A. rule of measurement, which would heavily handicap the beamy cat-boat, and under which some powerful deep bodied yachts have been launched this spring. In moderate weather the Georgic may give a good account of herself, as he is a deep, able boat for ber kind, but in a choppy sea she will be all lost, and the deep fellows will leave her to leeward pounding away while they soak out to windward. If sailing under length, however, the Newport production will out-ton her rivals heavily, especially if matched against the old light displacement Clyde lug-sail boats.

FITTING OUT—E. B. Kingsbury, 151 South street, carries a large

Firting Our.—E. B. Kingsbury, 154 South street, carries a large stock of oars, handspikes, hoops, hanks and ship-chandlery generally, and is prepared to furnish yachts at short notice. His earl will be found among our advertisements.

DESIGNING IN THE EAST.—Mr. D. J. Lawlor is by long odds the recognized leader in modeling and designing in the East, and receives the lion's share of the work being done in floston. From personal inspection, we are able to bear restimony to the sound-ness and strength of his jubs. There is not another yacht in America which has the materials or fastenings in her 'house,' that Mr. Lawlor has recently put into the "old Julia." He is also building a fine cruising yawl for floston owners, after the English model, and before described in these columns. The yawl will be a roomy, able craft, but is perhaps a little straight on her side. This is the consequence of pressure excried by the English rule of measurement, her lines laxing been furnished by Ratsey, of Cowes. She is now being planted. The handsome little steam yacht Additu, belonging to Mr. Peabody, is receiving spousons on her sides to increase the width of her gangways. Beside this Mr. Lawlor has furnished nodels and plaus for several other yachts building in the neglablorhood, of which more mon. What we find to addition in the work of Mr. Lawlor is the versatility and the success which he meets in designing vessels of all Mads and classes, yachts, pilot-boats, steamers or freighters. This is to be attributed, we think, to an investigation of naval architecture from a scientific point of view, placing the student beyond the marrow views and canser deduction of mere practice, and enlarging correspondingly the scope of usefulness and the probabilities of success where he undertakes.

cess in what he undertakes.

LSHAGSH ZACHT CLUB.—The Commodore writes us: "Somebody has defined fame as getting shot in battle, and having your
name spelt wrong in the Gazette. I want to stand right with posterity. To vindicate the truth of history, please spell my name
Goe. W. Burnell." The next time a compositor trifics with the
well known signature of the Commodore of the Oshkosh Y. C.,
there will be a collision between the pavement and a typo's
camium.

The Orion,—This well-known sloop will be put in commission this year, with no less a person turn the Mayor of New York as herskipper. The stoop is not to be sold, but to be kept in the Cooper family us an heirleour.

AN EASTIAN YAUTTING ASSOLIATION.—We learn that the following clubs have decided to attend the meeting in response to a collisised recently by the Dorchester X. C.: The Boston Y. C.; its swelling folds. With all linese large on the the old had composite side to the foresail, and holds a good capital of size chester and fleverly. A set of rules has been decided upon for submission to the clubs, and it is hoped that other clubs in the mightorhood will join. We are anxious to know how some of the clubs mentioned can affiliate with the shifting ballast clubs sight, Portland, in a shape of Cape Elizabeth, begins to yellow.

on the question of sailing rules. If Boston can reconcile such opposing interests, we would like to learn how it can be done. It is a case of pleying with fire, and yet not getting burnt.

Stow Dows.—The following from the pen of a correspondent appears in Pacific Life:—

A desperate effort is being made to introduce the Loglish cut-

A desperate effort is being made to introduce the English cutter, and the Porest ard Stream man has gone daft on the question.

Never mind the "Forest and State man has gotten that it question." Never mind the "Forest and Stiream man;" he can work his own ship. But isn't this just a little cool coming from a worthy friend who cretwidth and gone "daft" on the sloop, and who, nevertheless, "swung around the circle," and now chants praises to the yaw?? Come, now, in time, good friend; when you hays seen the "compromise cutters" allout this year, even the double head rig will no longer rile; you will swing around a little more, and when that use Pecries is launched in San Francisco Bay (may the day soon come), our word for it, she will have a double head rig. What the "Porest AND STREAM man" has gone "daft" on, and what he proposes to remain "daft" on, is the displacement of the shallow, dangerous unhandy frying-pans by deep-bodied, able, safe and handy vessels, and if the whilom skipner of the Pecries (peace be to her soul!) will keep his eyes abroad, he will note the changes going on, in concert with the tenor of these columns, much faster that he seems to think. If success is the criterion of daftness, we own to the impeachment. The vlews of no other journal in America have been acted upon and accepted so extensively as ours, and that in one short year. In the face of blind prejudlee and narrow national vanity. But patience, friend; Home was not build, no ady.

A TEN DAYS' CRUISE IN '70, RECORDED BY THE "CAPTAIN." WHO is there who ever did anything worth speaking of upon

Who is increwing over un anything worth speaking or the day when he was bound on a cruise? That is, if he could help it. Certainly very few bideed is their number, and had one of the live boon companions who were to sail on the group yacht. B—, 40 tons new, did anything at all on the mincteenth day of last July. We had all come on board the night before, and nay or last July. We mad an come on more than nade elected and therefore breakfasted together preparatory to separating for half the day, two to go to business, one of whom did some work, half the other confessed that he loafed all the time he was on shore The other three remain on board to enjoy the soothing eigaret Finally the "Captain" leaves to do some imaginary work at hi Mee and attend to some last odds and ends indispensable to th once and attent to some as a coust and closs indepensions of welfare of the crew. Hot in town? Well, slightly. Every yacht man knows that steaming, stifling feeling that comes over on after exchanging the cool deck and a un, especially when the thormometer registers 94 degrees in the sunds. At another the cooks, the Captain, included proud and hired a coupt, drives in state to a neighboring bestore, where a yachting friend in the trade, and himself, pick various new novels, papers and, of course, the last Forest a plunges into his cab and is hurried off in search of one of hi plunges into his cale and is intricted of in seated of one of in-quondam partners, who issues from his office armed with a les-suit of clothes. Again the old trap is in motion, and this un-there is no stop till we reach the wharves, where the mate take charge of the luggage and the "Captain" attends to the callocharge of the negage and the "captum intention to new who departs smiling and wishing a "line vige to ye sor," on the influence of a liberal doncew. Yachtsmen starting on a cream tevery one to be as happy as they are, and the each aid and waiters reap the benefit of it on that day. As I have and waiters reap the bench of it of that day. As I have sa-before, the day was extremely wairia, so, tumbling into the bac-without walling for the rest of the cruisers, the order is given-shove off, and boat laden with our traps and also sundry strucy boxes, ends of which show strange devices such as Bass' pake— St. Jul—, the rest of the mark being hidden by another box is parcel, these being a few last things which are to be taken to be parted, nese neigh a taw isst uning which are to be cave healthen. Climbing on board, "Gisket" and the "Captain" di below and are soon deep in the mysteries of boned turkey, brand and Jam, washed down with cool alet, together with various ap-tizing condiments, which are spread out for lunch. Our stews is one of the first water, and the "Captain" being something of is one of the first water, and the "Captain" being something of gournment, the cabin passengers fare very well on the B.—. We to the man who has any quantum of mal-de-mer, sad for him is 14 look upon the tempting display and not be able to parial Every one now has come on board, and "Jerseys" and naive trowsers of ye cruizing biped take the place of fine rainand causing the cruiser to undergo the change from butterly grub, thereby reversing the order of nature. At about 20 me hoist the gir, get up anchor, and with a light air from the southwest run smoothly down to Deer Island, anchoring me. Sheland Gur, those he Tall's famous bestley where the Nature. Shirley Gut, close by Taft's famous hostelry where the Naha Club dinner is to take place. It is just as well we anchored the Cini dinner is to take place. It is just as near we anchor for in half an hour the breeze dies away almost entirely a Addie Voorhier just gets her anchor down when it falls allo and a "dead ealm rests upon the bay." The dinner over, on board again, but no breeze was forthcoming, and it w until an hour and a half after midmight that we up ancho proceed on our way, before a very light southwest breez the cabin was shrouded in silence and somnotene about time, and it is not till about 8.30 the next morning that the begin to show above deck. We found ourselves about six at to the northeast of Thatcher's Island in a flat calm. No show to the hortheast of Thattener's Island in a nate cain. Not is made to dress, and the costumes, though counfortable extreme, would hardly "washee, washee" on shore. If are great and glorious things, and the man who invented ought to have a monument crected to him. One feels that ought to mye a monthest create than, and that is eno ship-board or yacab-board. At about 9.30 the Ame sight-board or yacab-board. At about 9.30 the Ame sightled in the distance off Squam (sweet name) in the pleasing predicament as ourselves. But see I down to the west Is a dark blue line which certainly betokens a broczowest is a dark blue line which certainly betokens a brocze, it comes rapidly towards us, we speculate as to the hour-probable arrival in Bath, or where we shall be at such The conjectures ranged all the way from Portland, to river out of sight of Seguin Island at 8 o'clock in the e As there is a difference of thirty ralles between the points somethody has got to be wrong. The rest on between; I cannot remember exactly "which is who's the exception of these two, the former being the muster's, and the latter the "Capután's." A quarter of a spicee, extensive raides, is put up, and we begin to their test all in readdness for the comping breeze. Here it is and away we so before it direct for Sazulin, winged on and away we go before it, direct for Saguin, winged or every strick set, including the balloon staysall, which bellis opposite side to the foresul, and holds a good capful of its swelling folds. With all these rags on her the old

ap. Sill on we press, a slightroll catching heraft and lifting her along. Everybody now is out forward—"Gasket" at his favorite post in the cross-trees, the "Captain" out on the extreme end of the fib-boom, all watching for Seguin Light. Finally, well along in the afternoon, it heaves in sight, and there is a howl of triumph from the "Gaptain," who sees some prospect of "coming in for thopet," Six o'clock dinner saw us whether the pot." Six o'clock dinner saw us plainly in sight of the light-though still some distance off, and we rush below. I don't think I ever saw any of the crowd wander sedately down to their feed on this old craft, unless there were laddes on board— an embellishment seldom indulged in. A metrier crowd never gathered around a yacht's table. The cozy cubin was lighted up, and telt doubly sing by the rush of the water outside. It was the and telt doubly snug by the rush of the water outside. It was the first dinner on board of the cruise, and hence a lively one, as indeed most of our dinners are; and then the fascination of tumbling up on deck, and laying round "like snakes," as one of the aggested, watching the setting sun, and enjoying the scoth boys suggested, watching the setting sun, and enjoying the scotting cigar or pipe in the gathering twilight, while a blissful contentment pervades one's whole being, making a man feel like
forgiving his worst enemy for the none. But this must be done
to be appreciated, for all the pen-painting in the world cannot do
forgrave a subject full justice. Our costumes at dinner are
decidedly unique, if not exactly comme if faut. "Eben" arrays himedicing unique, in not exactly comme a plat. "Both arrays min-self in a low-cut, blue boating jersey and a pair of wild check trowsers of ancient date (but good for a watery graye we tell him), a blue and white scull-cap stuck on his head suggesting the him), a blue and white scull-cap stuck on his head suggesting the appellation "Chince" from several unappretiative small nuckers in Bath; "Gasket," the fair, in a gray or drab-checked flannel shirt, nondescript (rowsers, old slippers which have seen many a cruisc,pea-jacket and wide-awake of heather hue, proboseds armed with goggles, and a smile of anticipation on his face as he view? He feast. "Siley" was clad in white jersey, while Scotch cap, gray trowsers and white shoes, looking for all the world like an Albino; while the "Infant" goes in for an old jersey, disreputable trowsers, scull-cap and brown yachting shoes. The "Captain" likewise effects the blue jersey, blue coat, blue trowsers and white yatching shoes, it "Angleia, while either a long-knit, corsair" cut of cap or the "cheese-cutter," with its gold braid and tortoise-shell viser, surmounts his expansive brow. Thus you see we are cut of cap or the "oheese-cutter," with its gold braid and tortoise-shell viser, surmounts his expansive brow. Thus you see we are not a "shirt-collar" crowd, and go in for comfort of the solid sort while we are afont. We are roused from dessert about 7.30 by a cry from skipper of "Passed Seguin, sir; mouth of the river right ahead." We haul our wind a little and shoot into the river in good style. By 8 o'clock we are out of sight of the mouth, and the "Captain" pockets the stakes in triumph. At 9.35 r.m. we anchor off Bath, and feel that we have done a good day's satiling—about 104 miles, as near as I can make it, in eleven hours and thirty-flye minutes.

arry-nive minutes.

So endeth the first sailing day of our cruise, and we turned in after another onslaught on various edibles at some unholy hour of the night, happily, however, not to be called to account by our digestive organs, nor to have our female ancestors arrayed before us in nightmares. Salt water is uncongenial to ghosts of

thirty-five minutes.

any sort.
Monday, the 21st, showed us a clear sky in the morning, with a flawy wind, said to be common to the Kennebec at this time of Hawy wind, sau to be common to take kennedee at this time of the year. Ab breakfats the plans for the day were discussed, and though two out of the five had seen the city before, the minority for once carried the day, and it was decided that we go up the river, spend the day, and lunch ashore. A cat-boat was hired and brought alongside, and a cargo of yarious edibles and drinkables in compact form stowed away under the seats. Leaving the steward and one hand in charge of the yacht, the resi the steward and one hand in charge of the yacht, the rest having gone to visit their respective families who reside hereabout, we shove off and proceed on the way. "Gasket" immediately takes the post of steersmann, and away we go with a free breeze and tide up the river. The small steamer which runs to Gardiner set out at about the same time, and the fair damesis on board eyed our various "get-ups" with enviroisty and amusement. This was not surprising, for we must have had the air of a theatrical band of pirates of the deepest dye in search of plunder. Swiftly and quietly we glided along till we arrived off a reaceful looking "now, where we proceeded to run the box, as here are looking nook, where we proceeded to run the bout ashore and bathe. To those who have not seen the Kennebec in all its full name. To mose who have not seen the kenneech in all 18 lun-pride of summer garb, life 18, comparatively speaking, a blank. The thick trees growing close down to the edge of the banks, and s-retching far back into the hills form a rich mass of color which cannot be excelled, and is exceedingly refreshing after months of city life. Here one finds the "white-headed cage" on his native city life. Here one finds the "white-headed eagle" on his mative heath, which heath, by the way, is more than likely to be a dead tree—circling round and bullying the fishbawk out of his meanday lunch. Here several times have members of various cruices on the B— essayed to slaughter the bald-headed bird, but always without success. The "coy" bird seems to bear a charmed life, so they say, and to escape unburt from the deadly shot or bullet. We landed and sat round eating and chatting, in the light and airy costume generally attributed to the noble red man, for the dry was warm and the air, outside of the breeze, decidedly repid. When the humor struck us we took a bath and came out to dry in the sun—the performance to be repeated again. Thus time nassed When the hamor struck us we took a van dan came or to dry in the sun-the performance to be repeated again. Thus time passed in peaceful security, and we noticed not that the wind had fresh-ened and the tide turned against us. Finally, we put of once tide turned against us. Finally, we put off de out into the middle of the river, only to find more and ma 5.)ves curried along by the swift-running tide in a direction contrary to our wishes, and ratitled about by the wind in a manner more forcible than cheerful. Back we put to wait for the turn of the tide, and perhaps the lulling of the wind. At last circumstances favor us once more. The deck is cleared for action; ulsters, rugs, basicots and all packed into the enddy. Away we go, in moderately light attire, the nervous party at the helm predicting that we might have to swim for it, and stripping to his undershirt and unmentionables accordingly. This, however, was not our good fortune. The wind changed to the sixteen different points of the compass, but somehow was always ahead, and the water flow right and left in a most disgusting manner. Tack after tack we made, till finally we got in the strength of the out-running salves carried along by the swift-running tide in a direction contack we made, till finally we got in the strength of the out-running take we than the way that little we got in the strong in the out-ther, soaked up to windown the wind in the cloud look the wind in the cy, without expectation, and tear dions half a nile deate to the characteristic for a small boat. We got our share of the sea and kept the pump working till we made our last tack, and ranged up along-side of the B—before our admiring crowd, who had watched us coming. In less time than it takes to write it, we were in a state of nature, and being rubbed down with coarse towels. of matter, and can rubbed own with coarse towers. While the steward brewed it delloious hot punch, we rolled ourselves in blankets and stretched out on the transons. A noggin of the afore-mentioned punch and a map put usall right again, and we afore-mentioned punch and a map put usali right again, and we turned up at dinner none the worse for our proloned bath of spray. That evening we strolled through the town, but as there is nothing of startling interest in the place itself we got on heard quite early, and spent the evening in social confab.

[To be continued.]

Answers to Correspondents.

W. T. W. Colones N. V .. Address the Secretary of each State. C. M. A .- "Oars and Soulls," by Woodgate. Can forward upon receipt of price, \$1.75.

SPORTSMAN, Boston, Mass .- Your setter has the mange, for thich you can try Glover's mange cure, advertised in this paper t can be procured in your city.

S. R. C. J. Newark.-Read the article "Parmachenes and the Rangeley Circuit," in a recent issue. From the date there given you can estimate the expenses of a party of six.

L. H. G., Constantine, Mich.—You say that you want a r triever; one that will do bis work on both land and water. W therefore advise you to get a first-class Irish water spaniel pupp which you can most probably do by applying at once to Mr. W R Wells Jr. Chatham, Ont.

J. P. B. Hudson, Wis. Two men tie in a glass-ball match, a agree to shoot off at double balls. One shoots at both balls and misses both; the other shoots at one and breaks it, and does not shoot at the other. Who wins? Aus. The other wins; it was not necessary to shoot at the second ball.

G. Y., New York City.—The removal of dew claws should always be done when the animal is very young, their excision then being accomplished with a sharp pair of seissors. First divide the skin, are draw the dew-claw to an state before it is detached, in order that the skin may afterward cover the wound.

A. D. E., Irvington, N. V.—Dy all means a setter dog, one and a half years old, should be allowed meat with his other food, and he

half years old, should be allowed meat with his other food, and he should always have bones on which to graw. If you have proper inclosure, allow the dog to run at will; do not chain bin up. We are now publishing a series of articles on dog breaking, which will give you the information you desire.

J. S. L. W., Philadelwhia, Pa.—My cocker spaniel's teeth are disfigured by a brown seale, which seems firmly altached. His gums are coated, and his breath offensive. I judge it is the outgrowth of distemper which he bud badly. He seems perfectly well, i not highly fed, and gets plenty of exercise. Ans. Have the atriar removed by a dental instrument, and by a person who understands dentistry. Allow the dog large bones, upon which to graw and clean his teeth.

J. H. R., Jr., Chiengo, III.—Should a dog remain at his point while the sportsman flushes his bird? Ans. All young dogs should be broken to hold their point and the gun should move the birds. In open shoulting, such as qualf, snipe, pratric chiefs.

the hirds. In open shooting, such as quall, snipe, prairie chick the bries. In open shoring, sand as quant sample, plante chiese ens, etc., it is best, in the long run, to adopt the plan, with dogs of all ages, to have the sportsman flush the game. Our views on this subject will be given shortly in one of the papers on dog-

breaking to which we refer you.

BLANCHARD.—Cuttidg away forefoot might give your boat BLANCIARD.—Cutifig away forefoot might give your boat weather helm, if you can cut away enough to counterwat her kee helm, without reducing the lateral resistances too much. Putting a "shoe" on aft will have a similar effect. Or shorten head booms and add to leach of mainsail: or shift the whole rig further uft, or trin by the stem. All will have a like tendency. They serve to carry the center of lateral resistance. Stemposts are raised for the sake of handliness, and to cut away friction surface of little value as lateral resistance.

lateral resistance. R. E. E., Buffalo, N. Y.—My spaniel, seven months old, has been A. E., Bullad, A. (1994) spaties, even are bloodshot, and are acting very supidly and lazy. His eyes are bloodshot, and are continually running. He cuts very little, and while sleeping breathes very heavily and occasionally makes a knud of meaning sound. Ans. The puppy is very probably in the first stages of distemper. Givé a dessertsponsituithrice a day of following pre-scription-spirits of nitre, two drachms; time, gentian, two drachms; mindererus spirits, six drachms, and water, three ounces. If doe progresses favorably give one grain of quinine three times a day, and discontinue the above mixture. Keep puppy warm and dry. Write results.

J.T.O'F., Newton, Miss.—I have a pointer-bitch puppy, about nine months old, which a few nights go was taken with a sudden weakness in her hip joints. No indication of a hurt. Appetite good, and general condition excellent. Ans. Bitches occasionally become puralyzed when they are in season, but they usually get call right earin. Your nuous has had a partial stroke, and we distemper. Give a dessertspoonful thrice a day of following pre-

all right again. Your puppy has had a partial stroke, and an ingan again. Four hoppy has had a parant series, and we would suggest a stimulating liminent, with plenty of rfetction on hind part of back, run.p. loins, etc. Paralysis is frequently the result of worms, for which you may try. Write Curther; and if no better will advise course of strychina.

H. P. D., Goldsboro', N. C.—I have an English setter, three and

H. P. D., Goldsboro', N. C.—I maye an inagina setter, three and a half years old, which has had a bad cough for two years or more. It comes on periodically. He coughs most when toing excreised. The dog seems in good condition. Please give me a remedy in your valuable paper. Ans. We should judge, from your description, that the trouble is caused by chronic bronchitts. Five grains of muriate of aumonia, dissolved in a little water, three grains of muriate of aumonia, dissolved in a little water, three processing and the processing of the control of aumonia. times a day may be of service. Good food, regular exercise and warm kenneling is what you must depend upon to give the dog relief.

IKISH WATER SPANIELS, Philadelphia, Pa.—I bayo a fine Irish

HISH WATER SAMEES, Frankens, Frankens, and iriso water spaniel puppy, four months old, which has had sore eyes ever since I got It—that is about five weeks since. It is now strong and feels well, but Is subject to fits. At first, It would have them about three times a week; now it has two in one day, and sometimes oftener. I feed it four days in the week on bolied rice and new hik, two days on Spratt's doy breat, with a little rice and new hik, two days on Spratt's doy breat, with a little from the control of the strong the second of the strong that is the second of the rice and new milk, two days on Spratts dog breat, with fittle beef tea, and one day with bread and milk. It is kept clean and dry, and moderately warm. Please advise me what to do. Ans. Give puppy two doses, one in morning, one in evening, of the follow-mixture: Four grains of calonel, with fifteen grains of subcarbonate of bismuth; three hours after second dose, give a fair quantity of castor oil. Try change of diet, omitting altogether erice, and add a little sait to the rice at all times. Pearl barley

the rice, and add a little surround, while result within a few days, is superior to rice in every way. Write result within a few days, M. L. N., Greenbush, N. V.—I have two red Irish setter pursuever months old, very sick with the distamper, lungs somewhat have been sicked to be a distributed to be a few from the control of the contro seven months old, very sick who the congested, also diarrhea troubling them. They have been sick congested, also diarrhea troubling them. What shall I give them ome fifteen days—now in second stage. What shall I give them or both difficulties? Ans. For the lung trouble, counter irritafor both dimentices? Ans. For an enough counter firma-tion by means of strong liniment, or epitits of turpentine; if the latter is employed, be careful not to use too much, as it is very powerful. The dog should be rubbed under fore-legs and across the chest. For charchea, injections of one-half teaspoonful of the clast. For marriaga injections of one-anal reaspoint in haddening in table-spoonful of shareh water, repeated about after every third discharge of bowels, if they are coplous or straining. Probably by the time of this publication, two grains of quining four times a day, and nutritious broths will be of decided benefit. Keen the number warm and dry.

pileptic fits, fulls and straightens himself out with a tremor, and roths at the mouth. After he hashad two or three, his eyes look addy and he breathes rapidly, and is dumpish. The lits come on

about two weeks apart. I thought at first he was poisoned when about two weeks upart. I thought at first he was pelsoned when I saw him in spansa, but it is a pure case of epilepsy, without doubt. Will you kindly inform me what to do tor him. He is a string a multitous animal, and I have kept him rather close? Ans, If you are correct that they are a pure epileptic fit, a cure is not probable, but the spasms may be due to some irritating cause in the stomach or bowdes, such as worms, for which you had better try. Adopt some course of treatment in this direction. Your dog should have plenty of exercise, and if a singlight on mist or wet ground, wet the back of his bead from time to time. Dogs that are confine in dark or domp places frequently have fits when brought into the light and son.

R. M. R., Philadelphia, -1. I have an imported setter numry, ten II. M. B., Palladelphin.—1. I have an imported ector puppy, ten or twelve months old, that has weak eyes, considerable matter running from them in the morning; has no symptoms of any other trouble, save occasional harging. 2. Would you recom-mend my sending him into the country, or shall I keep him in the city? 3. What is best food for him, is must object ornable? 4. At city? 3. What is best food for him, is ment objectionable? 4. At what age do dogs generally have distanper? 5. At what are should I begin to train him? 6. He is annoyed by fleas, would it hurt him to use? Persian Insect. Powder? on him? Ans. 1. You must keep the eyes clean by washing then three times a day with tepid water. We do not advise a botton being applied to the eyes of very young dogs. 2. Send him to the country by all means, pupples should never be tiep or cooped up: they must have their liberty, and in an inclosure where they can do no damage, 3. Young dogs require food more frequently than old ones, we chould therefore from them. 3. Young dogs require food more frequently than old ones, you should, therefore, food about three times a lay, providing you allow plenty of exercise. Much and milk, with a little sail, boiled potatoes mixed with gravy, wholesome table scraps, with little nead, etc., should constitute his food, which you can occasionally vary. 4. The distemper attacks dogs of all ages, although the period of greatest liability is beyond maturity. 5. The articles on dog-breaking, which are now being published in the Fougest AND STRILM, will give you the correct ideas hout house-breaking pupples, and when to introduce them in the flost. 6. You may use the insect powder; it cannot hard him. SpratUs soap is the best we know of to keep a dog clean—see advertisement fa another column. Read the paper, it contains the information you desire.

CAPTAIN. Fort Bayard. New Mexico .- I have a setter punny CAPTAIN, FORL INVARIA, New MEXICO.—I have a setter puppy about eight months old; think he has mance. The following are all the symptoms that have made their appearance:—Its control now is dry and faded, looks broken and curls up, especially so in rear of right shoulder; this has been confined to richt side, but now seems spreading on both sides. Sometime ago, in greening him, saw in his hair small white flakes of skin, which are still present. Have been compelled to feed mostly meat, with beant and potatoes. Seeing his condition of hair thought be had worms, and was confirmed in this opinion byhis actions. Gave him three doses of areas anti, followed by casteony. He three up a small tape worm and passed segment of tape worm after-wards. The pupp has plenty of exercise, as he is allowed his freedom. Seems in good spirits generally, and weighs about forty-five 'pounds. What do you advise? Ans. Treatment should be directed to getting rid of worms. Do not feed the dog for fifteen boxes and then give twenty variats of most form. rear of right shoulder: this has been confined to right side should be directed to getting ray of worms. Do not need the dop for fifteen hours, and then give twenty grains of male fern; one thour latter repeat same dose in easter oil. If the dog shows that he really has mange, by scratching himself and having sores on his body, you can then treat as his body, you can then treat as follows:-mix together four ounces of sublimed sulphur, two ounces oil of tar, and one pint of ounces of summer support, we contest of our lar, and one pint of olive oil. Dress doe all over with it every day for three days fourth day wash off with carbolic scope next day repeat dressing as before. Be careful to rub the mixture well into the skin. Give two and a half drops of Fowler's solution of arsenic in food Ore two dwarfs and all priors occased ones to five drops. Continue with this treatment for some time, to receive the most beneficial results should, however, the dog show no indication to exerct, we would advise you to simply try to build up his constitution by exhing this two grains of up the drop of the

"Summeriand Sketches."—The following charming bits are taken from Dr. F. L. Oswald's "Summerland Sketches." and tell us something of a land about which we of the North know but little. Our readers, who remember Dr. Oswald's delightful sketches in previous issues of Forest and Strell and in other periodicals, will warmly welcome these notes from his graceful pen :-

Den:—
COYOTE CONCERTS.—"I could not help admiring the wisdom of a merciful Creator, who has not increased the vocal power of animals in proportion to their size, when the overture of a coyote serenade sounded athwart the hills about an hour after sunset. It commenced with a slow crescendo, so irresistibly lugaribious that two of our dogs at once raised their heads and swelled their voices in a responsive tremolo, which may have been heard and appreciated by their distinct relatives. A kick brought their antiphones to an abruph finde, but every now and then their irrepressible feelings found vent in a low whine.

"It cannot be hunger that makes the Mexican coyotes howl, for the forests of the Excitat are inexhaustil lo storehouses of animal food, and the occasional disappointments which may attend their productory enterprises would hardly furnish an excuse for such loud and protracted laments. It is rather an elegiac tendency which manifests itself it all the varieties of the genus Canis, for even the diago, the voiceless dog of the Australian wilderness, breaks forth into sympathelio grants if he hears a puppy whine. It is the one touch of Nature that makes all canines kin, and has probably been inherited from their common ancestor, the wolf, once "A mighty hinter before the Lord," but who may have bearned to howl when his business declined under the competition of Nimrod & Co., till the hinter became the huntest, unless he preferred to enter the service of his rival at dog-wages," It cannot be hunger that makes the Mexican coyotes

THE HOME OF THE PURILE MACAW,—"The favorite haunts of the macaw are the woods of Southern Yucatan, especially the full forests, that abound in wild higs and the sweet acorns of the Queyens tiee. In a wooded valley on our left a swarm of the purple variety were called together by their leader and started off in double file, or, rather, by sets of twos, not high overhead the column divided pairwise, and the separate couples took a beschipe to their respective nests. If wasta pretty sight, and their larsh acres us sounded clear and includious from the discusses. The start is not provided that the content of the properties of the properti narsa screams sound driver and mechanish route vis-tance—from an asconishing distance, indeed, for the voice of the larger purrots is not less remarkable for its power than its versatility. The purple macaw can summon their mates from across the broadest rivers of the Ameri-can tropic.

NOTE THE CHANGE.

THE FOREST AND STREAM is now in possession of a spacious suite of rooms in the Times building, Nos 39 and 40 Park Row. The new offices have been specially litted up for its occupancy, and nothing has been neglected which experience could suggest to secure for ts editors and publishers the very best facilities of the day for newspaper work.

We are now in a central location, casy of access, and our door is wide open to receive all our friends. had thought to celebrate the occasion by an old-fash ioned "house-warming," to which should be gathered a goodly assemblage of our contributors and readers; but deterred by the impracticubility of such a sportsman's convention, we are content to extend to each and all who shall read these lines, severally and collectively, a hearty invitation to call on us and inspect the new premises. Congratulations by letter and in person are in order.

With new and better arrangements for work, the FOREST AND STREAM is prepared to add to its excellence and usefulness, and to keep pace with the participation in healthy and manly sport which is so rapidly increasing throughout the country.

We must again caution our correspondents to direct all communications of every nature relating to this journal to the Forest and Stream Publishing Company, and not to any individual. This is an imperative rule to prevent the miscarriage of letters, and to insure their receipt by ourselves.

A COMMENDABLE ACTION.-The Long Island Railroad has issued an order (General Order No. 64) to the effect that "game, fish, dogs, and hunting and fishing tackle, when in charge of the owners traveling as passengers will be carried as baggage, free of charge, This remedies an abuse frequently complained of by sportsmen who have been subjected to the extortions and incivilities of employees. The new rule will serve to make this favorite road still more popular with the sporting fraternity.

- We again invite attention to the value and benefitof our Game and Fish Directory, of which the plan is set forth in another colume.

WILLIAM M. TILESTON.

O chronicle the death of one with whom we have been long and pleasantly associated were at best but the performance of a melancholy duty, which in the present instance is rendered doubly painful because of the sad attendant circumstances under which our friend. William M. Tileston, lost his life.

Upon the evening of the 21st inst., while the Madison Square Garden, of this city, was thronged with visitors to the Hahnemann Hospital Fair, suddenly and without warning, a portion of the building crashed to the earth crushing in its fall human limbs and destroying human lives. Mr. Tileston had been present, attending to business connected with the coming bench show, and having left the building, bad stopped on the sidewalk to talk a few moments-the fatal moments that cost him his life. With his companion he was just turning to go, when the wall above them was heard to crack, and before he could obey his companion's startled exclamation to jump from the sidewalk, he was caught in the falling rains and buried beneath a mass of mortar, bricks and timber. Ready help was at hand; he was extricated while still conscious, and borne, at his own request, to St. Luke's Hospital, where, at 4 o'clock the following morning, surrounded by the members of his family and a few intimate friends, he expired. Mr. Tileston was born at New Rochelle, N. Y., in 1838,

and came of a family prominent in mercantile life, being a nephew of the well-known Thomas Tileston. Having received a college education, he entered business life and went to China as the representative of Oliphant & Co. There he remained several years, one of the leading spirits of the English and American residents, and true to his tastes taking a lively interest in the field sports of Many of his novel experiences here were the country. afterward embodied in entertaining sketches of sport in China, contributed to the American magazines and sporting journals. Returning to California, Mr. Tileston purchased a ranche at Los Angelos, where he married. Some of our readers may recollect the capitally written sketches entitled "Santa Monica," written by him and published in the Forest and Stream (Vol. III., Nos. 11, 12 and 13), in which were recounted the romantic circum stances of his courtship and marriage. These sketches with numerous others which he wrote from time to time, attracted considerable attention, and subsequently led to his assuming the position of editor of the Kennel department of this journal, a position which he filled with mutual satisfaction to himself and the friends of the paper, until he left the Forest and Stream in June, 1877, to establish the Country. In October of the following year, when the latter journal suspended publication, he returned to his old position on the Forest and STREAM, where he remained until last November, when he left the journalist's profession to engage in business life, and established the firm of Nixon & Tileston, mining brokers, at No. 61 Broadway. Mr. Tileston was all his life a genuine and enthusiastic

sportsman. He was passionately fond of the dog, always owning several valuable animals himself, and being re garded as an excellent authority on the subject. It was to his energetic labors and executive ability that the Westminster Kennel Club, of this city, was established, and its annual bench shows of does conducted with such success. Indeed, Mr. Tileston was the life of the Club, and certainly to him belongs the credit of its exhibitions.

In person he was tall, standing over six feet in height and being well proportioned; he was forty-two years of age, and at the time of his death was in the best of health and spirits. In social and business life an agreeable companion, he had a large circle of friends and acquaintances, who highly esteemed him for his many gentlemanly qualities. He leaves a widow and four young children. To his family we extend not only our own sincerest sympathy, but that, as well, of those who knew Mr. Tileston through his connection with this ionrnal.

LYCOMING SPORTSMEN'S CLUB.-The first year of the Lycoming Sportsmen's Club of Williamsport, Pa., has been marked by eminently successful labors toward promoting the best interests of game protection. It has pursued its work so energetically and so efficiently as to render its name a terror to the law-breaker, and the pronounced evils which prompted its organization have become almost wholly suppressed. The club now numbers tifty members, many of whom are experts with rod and gun; is free from debt, and occupies a handsomely furnished room. At the annual meeting, April 13th, the following officers were elected for the coming year: President, Hugh L. White; Vice-President, Ed. G. Koch Secretary, James Armstrong, and Treasurer, August Koch. The following Executive Committee also elected to act with the ex-officio members thereof: Messra. G. Kent, D. P. Hobart, J. B. Emery, E. B Taylor and Alex, Davidson. A series of highly complimentary resolutions were passed, appreciative of the efficient labors of the retiring officers-Messrs. H. S. Lucas (President), H. Tallman (Vice-President), J. W. P. Parsons (Secretary) and August Koch (Treasurer), and of the Executive Committee.

AN UNJUST INSINUATION.

N a recent issue of one of our contemporaries we find a most surprising editorial effusion on the subject of field trials in general, the Eastern Field Trial Club in particular, and the breeders of dog-flesh at large. This remarkable production -remarkable on account of its extreme narrow mindedness and inconsistency-should not be allowed to pass unnoticed. The paragraph which is most fallacious in its reasoning and most unjust in its insinuations is as follows :—

One thing to be commented upon regard ng the late trials of the club, was the fact that the dogs entered and ran were, with one exception, the dogs hunted and owned by gentlemen sportsmen men identified with the love of a hunting dog, and not looking upon a setter or a pointer as a thing, a machine, from which money may be coined by cash sales. We find that the dogs ran for the amusement, the pleasure, the delight, if you will, of their owners, and not to gain éclat in victory to be then used as an advertisement for future emolument. The entries already received vertisement for future emoliment. In entires arrany reversed for the coming trials of 1850, to be rin at Itobia's Island, and commencing Monday, Nov. 29th, show the feature we allude to in a remarkable degree. In the list of entries we give below, our readers will find no long lot of entries from the various noted kennels of the land, identified with dow-breeding as a business. but instead, a dog or two from men who intend to run their dogs at the trials in good faith, and with the hope of winning there. In making these remarks, we have no intention of reflecting upon the National American Kennel Club in any way. We are des seeing the two clubs work harmonlously together for the common good, and we feel assured that the Eastern Field Trials Club would be the last to interfere with the National in the slightest degree, unless aggression comes from the latter. There is room enough for both.

If there had been one particle of manly or honest sentiment in the above, we should not have deemed it worth our trouble to go out of our way to expose the absurdities which it contains, for we feel that the direct slurs at kennel clubs and dog-breeders will fall as harmlessly as the proverbial drops on a duck's back, but we consider that it is in extremely bad taste, since nearly every man now-a-days, who owns a really good animal, sells either pups or stud services. The expressions in the article alluded to are inconsistent. Why does not our contemporary find fault with the horse-breeders of the country for standing their stallions or selling colts, or with other stock-breeders for making a business of breeding? just as legitimate and just as honorable to sell dogs as to

Again, these slurs are in bad taste, because the men by whom their author is most intimately surrounded have for years traded in dogs, and the bad feature of it is that they have been able to give very little for the money; and as he himself has probably realized something for dogs and the breeding of chickens, he is evidently not exactly in the position to throw the first stone. Although we have been extremely gratified and encouraged at seeing, of late, the gentleman sportsman take the breaking-whip in his own hands, and make such excellent records in handling as have been made at the late field trials, yet we would be equally gratified to see the sporting press of the country, which should be looked upon as a sound and healthy authority, preach less cant, and practice what is considered to be the ard precept of the sporting man-all that is honest, manly, open and fair.

If there is one class above another in this or any other country fitted to breed stock for an emolument, it is that composed of individuals who have other collateral than buncombe to fall back upon. It is only the wellfilled purse, in the first place, that procures the best and finest stock, and that can afford the means of so keeping it that its future offspring may be healthy and sound. To the class of men who, for their pleasure, or for their profit, have carried out this course, the sporting community here is immeasurably indebted, and especially to this generation of shooting men, and those that are to come, has the introduction of breeding-kennels in America been an endless boon, for it has given many a man the whereby for enjoying his favorite sport to the ut-most, to which his limited means would otherwise have kept him a stranger.

From the whole tone of the article it is evident that a sly cut is intended for the National American Kennel Club, for the writer referred to disclaims any such reflection before he is accused. Why he should do this, when it is admitted that "there is room enough for both clubs," is an enigma, and when taken into account that the officers of the N. A. K. C. are this year all from the East, there certainly can be no just ground for jealousy. We shall make it our pleasure to aid in every way the success of the Eastern Field Trials Club, but none the less will our endeavors be directed in assisting the N. A. K. C., in becoming what it should be—a national association. As for field trial clubs, the more the merrier.

But even were the ground taken by our contemporary a just one, the list of owners submitted as being made up of men who are not interested in dog breeding as a business is not what it pretends to be, but on the contrary, it ncludes several names which have before now been signed to receipts for money for dog flesh or dog breaking. Here it is : our readers may judge for themselves :-

J. B. Goodwin, Norwich, Conn.; J. G. Heckscher, Union Club, N. Y. City; Lincoln and Hellyar, Warren, Mass.; J. Otto Donner, 117, Wall Street, N. Y. City;

Notes.-We need not add anything to the communication of the Secretary of the Long Island Sportsmen's As He has presented the claims of this part of the State so conclusively that we shall confidently look for the Convention here next year. We heartily second the views of our correspondent, and commend them to the favorable consideration of the clubs throughout the State.

Th carticles on Dog-Breaking, published in our Kennel columns, are plain, practical and to the point. So say our readers, and the numerous compliments given to them prove that a good thing is appreciated.

The Connecticut Lakes country is becoming more popular as its attractions are becoming better known, The writer of the article in our issue of to-day is wellinformed, and the hints he gives should be followed by visitors to that region.

The article, "Lost in the Maine Woods," published in these columns some weeks ago, has been extensively copied by the press of the country. One reason of its taking so well is that this losing one's way in the forest is not an unusual experience, and the relation of our correspondent's adventures recalls to mind other mishaps of a like nature.

We publish to-day other expressions of opinion about the trap-shooting of pigeons. While holding very strong convictions on the subject ourselves, and which we shall not hesitate to fully express, we prefer at present to hold our columns open for the fullest and most free expression of the views of interested correspondents. We invite terse, concise expressions from our readers.

A London angling society has just celebrated the anniversary of the death of Julius Cæsar. Just what that worthy did, that his death should be remembered by fishermen in this Nineteenth Century, is quite beyond our comprehension, unless our English brothers of the rod bear in mind the days of their youth, when sunshine and zenhyrs invited them to the trout streams, while inexorable fate and an unrelenting tutor confined them to "Cosar's Commentaries" and the intricacies of bridge building in the time of the Gallic Wars,

A sportsman is not necessarily a "Nimrod," although a certain class of writers affect the word, probably with the idea that it adds dignity to their books. This use of strained language is offensive to one who finds genuine enjoyment in field sports. A "Nimrod," to our mind, is a blustering young fellow, trapped out in all the toggery of a sportsman's furnishing store, who acts in the field very much like an Indian in a war-dance. The epithet is a derogatory one. Stick to "Sportsman," term which has of late years acquired new credit and dignity.

Our rifle-shooting record in this number gives Mr. Lauritzen, of the Washington Club, a fine record of 219 at the long ranges, and strengthens his position on the flattering list of American marksmen who are safe for the high teens, with good prospect of reaching the twenties, as he did last year with his unequalled 222 in a It is matter of a pity that the harsh native-American rule should bar so reliable a man from international contests, for although a Dane by birth, Mr. Lauritzen has long been naturalized. Custom unhappily joins with law, and puts the Presidency and a place on a national rifle team as about the only discriminations against a foreign-born citizen as regards eligibility.

Much of the matter published by the FOREST AND STREAM is well worth reproduction elsewhere. We are gratified and complimented every week in the year by such appreciative copying in other papers. This is editorial courtesy which we always appreciate. Sometimes, too, it happens that we unexpectedly find ourselves in high places. An instance of this occurred the other day. We were looking over the April number of Scribner's, and became interested in an article describing the mules of the Rocky Mountains, an interest, however, which straightway abated when we found that the paper was substantially one published months before in the FOREST AND STREAM. The trappings were somewhat altered, and the animal was bedecked with sundry new accourtements. But it was our mule, after all, and eminently

worthy of his new place, too, we thought. It is needless to say that the editor of Scribner's was as much astonished to see in the Forest and Stream the original article as we had been to see its reproduction in the pages of his magazine. The Rocky Mountain mule is a deceptive creature. One knows not what to count on when dealing with him.

Civilized nations have passed and left no sign; but the Indian will be remembered by two things at least—the birch bark canoe which no production of the white can equal for strength, lightness, engedithess, sengoing qualities, and earrying capacity and the snow-shoe, which appears to be perfect in its form, and like a violin, incapable of development or improvement. are three inventions which the ingenuity of man seems to b able to improve upon, and two of them are the works o ges, namely, the violin, snow-shoes, and birch-bark canoes.

In this, Lord Dufferin is certainly not very complimentary to the mechanical genius of the century, and we would suggest as one reason why civilization has not improved on snow-shoes and birch-barks to any great extent, the fact that there is very little to improve upon But for all that, it will hardly do to assert that the snowshoes manufactured in civilized parts are not in point of strength, durability, pattern and finish far ahead of what the aborigines turn out. Similarly, the birch-bark is an excellent creation for the woods; but the very fact that the civilized sportsman takes more kindly to a Rushton canoe, whenever he can get one, must be accepted as the evidence of hard facts in its favor. As a makeshift, give us a birch-bark, and light the camp fire by the friction of kindlings; but as a matter of choice, send us a civilized canoe and a box of matches.

HIGHLY IMPORTANT IF TRUE.-We understand that the celebrated Sibau Mobung, chief of the Treng Dyaks, recently informed Herr Carl Bock, whom he encountered during the latter's explorations in Borneo, that he frequently cut off the heads of human beings of both sexes, for the purpose of feasting on the brains, which, he affirmed, were most excellent good eating. The palms of the hands too, he stated to be toothsome morsels, while the shoulders, on the contrary, he pronounced to be bitter. An authoritative statement like this, of the relative value of different portions of the human body as is certainly not without interest; but we could wish that the information were more extended and detailed. We presume that it is hopeless to call on any of our readers for information on such a topic, but we have two or three friends who could, if they would, present to us their experience. Old Bears' Ears, the Ree, for example, if his hair still adorns his venerable head, and has not ecome, since we last saw him, the ornament of some Sioux lodge, could inform us as to the excellence of the Sioux heart as a bonne bouche; and Liver Eating Johnson. if he still lives and moves and has his being on the plains and among the mountains of Montana, could furnish valuable statistics as to the flavor of certain parts of the freshly-killed Red man. It is sad to think how fast the men who could have told us what we want to know on the subject, are passing away. Bloody Knife went down with many another good man, in the fearful fight of the Little Bighorn, and Tuckee-tee-lous, the Pawnee, has for years been killing the fat cows in the happy huntingground of his own people, that lies far beyond the shin-Our civilization-God save the mark -has cut down the Red man to the ground.

FOR THE BENEFIT OF WHOM IT MAY CONCERN. -Fish ponds and newspapers are alike in that it is an exceedingly easy matter to sink a fortune in either, but quite a different task to get anything substantial back again. We cannot number on our fingers the experimentalists who have found their trout-ponds only expensive luxuries ; the number of newspaper amateurs is equally great. The success of one journal always invites a crowd of emulous imitators, who think that an investment in printers' ink must be a sure and speedy way to fortune. It has been the lot of the FOREST AND STREAM, since its beginning, seven years ago, to note from time to time the birth, life and death of numerous sporting weeklies, whose projectors have found only after dearly bought experience, that their sheets would not pass current for bank-notes.

We have watched each of these ventures with more or less interest, and from the fitful vicissitudes of their vexed existence, have not failed to draw the patent moral. Among other principles in the philosophy of the newspaper world we have noted this, and we here set it forth for the benefit of some of our friends: A publicacation which is made up principally of pickings and stealings-mostly stealings-from leading journals in its has an exceedingly uncertain tenure of life. Its limited constituency of readers will inevitably in time come to find out the source whence it draws its good things, and following the rule in such matters, will prefer the original to the weak imitation. The sheets which batten on the FOREST AND STREAM, stealing whole columns bodily, are annoying for the time being, but, like the pestiferous gnats and flies of summer, are sure to disappear when the frosts come. There is some consola-

ticles from the Forest and Stream without credit, but affix the writers' signatures as well, thereby making it appear that the writers themselves are playing double with us by writing the same thing for two papers. is of little importance to us, and we only mention the circumstance at the suggestion of our aggrieved contributors. We can hardly hope to remedy the annoyance, for such an undertaking as that would involve task of instilling into the befogged minds of these editors a code of ethics entirely above their character and appre-

So much for so much.

AGRICULTURE IN ALASKA.

SMITHSONIAN INSTITUTION, WASHINGTON, April 24th, 1880.

Editor Forest and Stream :-

"Piseco" was right in the statements of fact which he made before, and as I declared; why does he simply repeat those statements, and then leave the question exactly where we left it—a difference of judgment, based upon a mutual recognition of the same facts? the potato now, as I did then, but I do not "acknowledge the corn!"

"Piseco" has passed just one season in Alaska. He has arrived at his honest self-opinion in regard to the agricultural capacities of Alaska; he agrees with me in the main, but he says I am in error over the nota-Well, here is the opinion of an honored, cultivated officer, Capt. George W. Bailey, United States Revenue Marine, who has passed four seasons in Alaska, closing with October, 1879. I select Bailey's name out of twenty on my files, because he was just such a man as "Piseco"—a "Captain in the Navee," an honorable, elegant gentleman :-

Regarding the resources of Alaska, and it being able to give support to a large population, I have only to say that, so far as a sailor's opinion goes, it is folly to talk of such a thing in connection with Alaska north and west of Sitka. Instances have been with Alaska north and west of Sitka. Instances have been where people have lived in part from the production of the soil in more nothern latitudes. In some parts of this territory, the southeastern, no doubt the hardy vegetables could be raised, but hardly in sufficient quantities to support a large population.

Here I am sustained exactly in the broad, liberal view which Capt. Bailey gives of the subject. I have not said anywhere that potatoes could not be raised in Alaska, but I do say that this individual raising of a potato at Sitka "seven inches long," etc., proves nothing in a practical I said in 1874 that Alaska could not encourage agricultural settlement because she did not hold out a single sign of encouragement. Why, these little patches of potatoes at Sitka and at Kodiak in Alaska are precisely, in their application as illustrations of agricultural progress and capacity in Alaska, like the appearance of a stray hair here and there on the top of a shining bald head! Vet "Piseco" sees the hair aforesaid, and thereupon declares] that more will come if they are cultivated!

Let me call "Piseco" to a moment of reflection over these facts. First: Alaska is not a new country; it has been thoroughly looked over and tried by Russians for at least seventy years prior to our acquisition of it. Russians made energetic, intelligent and persistent trials of the resources of the soil everywhere throughout It was to their direct self-interest to do so, for Alaska. it was both a matter of necessity as well as that of luxury to have grain, beef and vegetables at their posts of duty, No more intelligent agriculturists than these Siberian farmers were (and are to-day) can be found in America. What was the result of this long, patient, interested attempt by the Russians to raise their own vegetables, grain and beef in Alaska? It resulted in failure, practically. They had to go down to California, and establish settlement on the Russian River there for the end in view. Comment is unnecessary. Second; The fact that the climate last season was such

as to grow good potatoes must not be used to predicate success at Sitka this year. Indeed, if "Piseco" follows his potato through the coming season, he will bear us out in saying that no dependence can be placed upon the crop: the chances are nine to one against a good season this year, since it was favorable last. One successful planting in four years is about the rule at Sitka. Let me quote Captain Bailey once again to reinforce my argument:

There are, no doubt, people who, satisfied with a mere exist-ence and willing to live upon the productions of the water and seaches, and what vegetables they could raise in this inhospitable citime, might eke out a more comfortable existence than they ble clime, might eke out a more comfortable existence than they now do. Such might consider Alaska a paradise. But the representations of some persons, who have described Alaska in glowing terms, I consider to be wrone, as they might induce the immigration of sottlers, who would not be satisfied after spending their all in getting here. The suplus population of our large cities can find better homes than can be found in Alaska. In some oftee can into better nomes than tean no found in Anisca, it is one of our Western States and territories, where a milder and more fruitful climate is to be found. Until the latter are crowded with sattles, it is unwise and unjustifiable, in my opinion, to try and Induce immigration to Alaska. . . . Alaska has been claimed as a grazing country for sheep as well as cattle, but only by those the plaints of these papers, which not only quote their arquantity to keep what few cattle they have during the winter;

I like to put this opinion of one honest mariner against "Piseco" and Captain Bailey stand that of the other. each other off admirably, while I pursue the even tenor of my way. It requires a certain breadth of beam to carry sail well under the sudden puffs of violent criticism, as no one enjoys the capsizing of a self-constituted authority, who makes his professions of fact and result, based entirely upon his able imagination, better than I do. Cognizant of this danger, I, myself, have looked well to my stays in Alaska, and "Pisco," when he comes down from his warlike ark at Sitka Bay, exchanging the gloom of Alaska fog and rain for the glad sunshine of California, will say amen, amen to my sermon.

HENRY W. ELLIOTT.

GAME PROTECTION.

WISCOTSIN,-The Black Hawk Club of Lake Koshkonong, Wis., have been successful in introducing into the game laws of that State an amendment prohibiting cover shooting of wild fowl from blinds, etc., a provision which most thoroughly protects the birds in their feeding grounds. The law now reads as follows :-

which most thoroughly protects the birds in their feeding grounds. The law now reads as follows:

Any person who shall take, catch, kill, destroy or wound any woodcock, prairie hen or prairie chicken, partridge or ruffed grouse, sharp tailed grouse, or grouse of any variety, snipe, quail, mallard, wood or teal duck, or deer, by the use of any net, trap, gin or spring-gun, or who shall kill, destroy or who shall hill, destroy or wound any wild duck, brant or goose, by the use of any pivot or swivel gun, or any fire-arm other than a gun habitually used at arm's length and fired or discharged from the shoulder, or raised and held by the hand, or by any float, sneak boat, sail or steamboat, or floating box of similar device, or from any fixed or artificial blind or ambush located in open water outside or beyond the natural cover of reeds, cane flogs, or wild rice, or any lake, river, bay or inlet, or attempt so to do, or who shall take, destroy, or have in his possession the eggs, or wandonly disturb or molest the nesting place of any prairie hen or prairie chicken, or grouse of any kind or variety, woodcock, quail, partridge, snipe, wild duck, brant, or who shall pursue, entrap, ensure or kill any otter, beaver, mink, muskrat, or other fur-bearing animals upon the lands or to the middle of any stream of water adjoining the lands of snother engaged in the business on such lands of breeding or rearing such animals, shall be punished by the not exceeding one hundred dollars, nor less than five dollars, for each offense. Such fine when collected shall be paid to the county treasurer, and by him to the school fund. to the school fund.

GAME IN SEASON IN APRIL.

Wild Ducks, Geese, Brant, etc.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.: Name of person to address.

ABOUT A RAMBOD-Extracted from the unpublished adventures of John Doe and Richard Roe, sportsmen :-

"It was early one morning that our friend John perched himself on a large musk-rat house in the middle of the pond 'to look out for ducks.' There he stood teetering away, with the down off the cat-tails blowing down his gun's barrel, threatening to choke it. At last John spotted an old sheldrake swimming up. Now John's was a mighty good gun to kick,' 'the best he'd ever seen,' and he was terribly afraid of pitching backward if he 'let go, standing up, so he made up his mind to lean forward as he 'pulled,' knowing the recoil would set him up all right. It was a dreadful nice calculation. But you see the 'derned' old gun snapped, and away went John, head first, into the mud, gun and all, when Dick waded in and fished them out. In trying to scoop the mud out of the barrel the ramrod got stuck; so over to the beach they went, with five feet of ramrod sticking out, to challenge some mighty fishermen to a 'tug of war.' After our two friends had been 'drug' over two sand-hills and a pile of clam-shells it occurred to the contestants that the rod was in to stay. But said old Capt. John Ed., 'What cussed fools we've been, boys, a-sweatin' over that 'ere gun, when we can make fast a squid-line, shoot the ram-rod up, and then haul the old she-rocket down.' No sooner said than done; the 'old she-rocket' did go up, but as no one thought of putting their foot on the other end of the line, she was soon 'lost to sight and memory dear'-dcar indeed, for as Capt. John Ed.'s weather eye dropped earthward, after following the comet's heavenly flight, he said : 'Boys, I'll thank you for 67 cents for that line you've gone and lost.' This is not all, for the gur—so John Doe says—smells like that old sea-porgic Captain to this day, which scares away the big game.

NEW YORK—Hayts Corners, Seneca County, March 30th.—Wild goese have stopped more frequently here than usual. M. L. Everett and his son were on their way to Waterloo (sixteen miles north from here) on Saturday

last, and four miles this side they saw some forty or fifty wild geese within fifty yards of the main road, and they say they were in sight of several cehicles on their way to market, and that one man shook his lat and shouted to scare the geese, as they were busily engaged feeding on green wheat. They paid no attention, as their sentinel gander was on duty sharp, until a man was seen approaching across the adjacent field with a rifle in hand. Then at the signal all rose and were on their way toward Cayuga Lake, four miles east; therefore there were no shots fired at them.

were no shots fired at them, L. E. W.

THE STATE CONVENTION.—Messrs, Parrish and Williams, of the Seneca Gun Club, Seneca Falls, have contracted with Frank Chaffey for the immediate delivery of 19,000 wild pigeons to be used at the coming tournament. One thousand birds have been shipped to the Monroe County Club, and will arrive this week, with a similar consignment to follow next week. The Rochester Gun Club and several clubs in that vicinity, have also ordered birds of Mr. Chaffey for practice.

Monday, May 2 th, has been appointed as the date for the opening of the Convention.

the opening of the Convention.

Hornellsville, April 26th.—The first woodcock of the season was killed by a telegraph wire. No Wilsons snipe yet. A few ducks stop with us and get a warm reception. Tom Tennant killed thirteen one day last week.

J. O. F.

New Jersey.—Forked River, April 24th—The Wilson snipe shooting has been moderately good in this section for the last few weeks. The largest bag I have heard of, in one day, was thirteen, by a gentleman from New York, with one of our local gunners. Were it not for two or three parties here who make a business of training dogs, and scour the meadows at every opportunity, we would have fine shooting.

A.

we would have fine shooting.

Occan County, N. J., April 24th.—For the past few A.

Occan County, N. J., April 24th.—For the past few days there have been plenty of snipe on certain meadows—on others none at all. I find they are most likely to be found this spring on very treacherous places, near high banks, where small fresh water streams run through, I have shot them this week where I went knee-deep every step. They do not lie well, and give no scent, and the best quail dogs totally fail to find or point them. The principal destruction of game is caused by the set-back fires started by men to stop the original fires. The game which is inclosed in the ring of the fire is surely destroyed. It is impossible to estimate the immense loss of all kinds of game by these terrible fires, and almost always caused by some circless person burning brush and clearing up land, fin my opinian there should be a law to prevent any person burning brush, for any reason whatever, except it be raining or snow on the ground.—Two winters will pass before those woods will be what they were. S.K., Ja. PENNSYLYAMIN—Harrisburg, April 28th.—Duck shoot-

PENNSYLVANIA—Harrisburg, April 25th.—Duck shooters have had good success the past week at Green's Dam, McCormick's Island, Cox's Wharf above Independence Island, between the island and the mouth of Conodoguinnet Creek, and elsewhere.

Pennsylvania-Applebachsville, April 18th.-PENNSYLVANIA—Appletoconsbutle, Appril 18th.—I and a friend were out snipe shooting last week. We met with poor success—bagged eleven in half a day. I shot four ducks in the creek the other day, and saw several geese. I hear most every morning the qualis whistling. I think we will have some fine shooting by next season. Pheasants are very scarce in the mountain.

DEAD SHOT.

ants are very scarce in the mountain. DEAD SHOT. GEORGIA—Americal, April 15th.—Quail are whistling "Bob White" on the fences, and the turtle-doves have mated. Whip-poor-wills, martins and woodpeckers have arrived, and the freedman, or rather the freedwoman, is happy with her pole and cotton string catching "pollywogs" from branches and creeks. The sportsman's gun is laid away, and the fox is allowed to rost and raise. Only the wild-cat is relentlessly pursued to protect the lambs and the litter of pigs in the swamp. Shor.

Only the wild-cat is relentlessly pursued to protect the lambs and the litter of pigs in the swamp. SHOT.

OH10—Cudiz, April 20th.—Around here game is rather thinned out. Quail are very scarce; I saw only one covey last winter. The severe weather of "78-79 very nearly exterminated them. However, by the time the law is up I think they will be plentier, though if it haln't been for that law I'm afraid there would not be many quail in the Buckeye State by this time. We have a few ruffed grouse here, though not many care to hunt them, because most fellows here think that the wholesale slaughter of squirrels is "sport."

There are occasional suipe and woodcock found in this region, though extremely rare. I believe if the average Cadiz hunter would kill one of either of these birds, he would, through ignorance, leave it as unfit for eating, or have it mounted as a rara avis, though there are several genuine sportsmen here.

Squirrels are generally very plenty, rabbits the same, though this last whiter they have been rather scarce; not so the year before, however, for then the woods were full, anywhere between twelve and twenty generally being the results of an afternoon's shooting. There is no wild fowl shooting at all within fifteen or twenty milk as a shooting at all within fifteen or twenty milks, as there are no bodies of water large enough. There are a good many foxes in this country, though few good fox-hounes.

Cadiz is a small village on a branch of the Pennsylvania

fox-bounds.

Cadiz is a small village on a branch of the Pennsylvama Railroad. We have a good many stories of the early settlers around here. One is to the effect that an old hunter captured a wolf and skinned it alive, after which he set it loose. It is true, too. There were a she wolf and four whelps killed near here a few days ago. We have a sportsmen's club here, and some of the members are right Young Sportsman. x-hounds. Cadiz is a small village on a branch of the Pennsylvania

INDIANA—Newport, April 17th.—Snipe and plover shooting is very good on the mash lands of the prairie west of this point. On last Tuesday afternoon my friend Ward and myself drove eight miles west of town to a point on the prairie known as Greasy Creek. We shot that evening and two hours next morning, bagging three blue-wing teal ducks and fifty-three Wilson snipe and plover.

prover.

Indiana,—Cloverdale, Ind., April 5th.—Was out the other day a short time with the snipe. They made their appearance about March 25th, with a storm of rain from the southwest, and are, as yet, very wild, and as a natural consequence, my bag was light. They are in good condition for the table, which I place to the credit of our mild winter. An examination of their feeding ground

disclosed plenty of grubs, snails and larvæ. Spring is now surely upon us, if our numerous early-calling birds is taken as evidence. LA Belle.

is taken as evidence,

SIDE SHOOT.—Tuscola, Ill., April 22d.—Following are
the scores of a match shoot at jack snipe yesterday:—

A. M. Woody, 33; T. Smith, 31—Total, 64. Frank Wilson, 37: Armstrong, 17—Total, 54. Difference, 10. Snipe
are plenty, but too many shooters.

Minnesora—St. Paul. April 10th.—Hon. Fred. Von
Baumbach, Secretary of State, and P. J. Giesen, Esq.,
returned yesterday from a hunting expedition of several
days in the vicinity of Redwood Falls. The gentlemen
brought with them several geese, a few ducks and badly
sm-burned faces to show as the fruits of their trip.
Wisconsin.—The famous "Fish Creck." one mile west

Wisconsin.—The famous "Fish Creek," one mile west of Ashland, Wisc, is reported to yield from three to six thousand brook trout per annum, and has done so for the past ten years, and still it seems eshaustless. Some of the finest trout that have been taken in that country have been brought in from its ice-cold nod and rhilds. Last season several very large trout were caught, one weighing three and three-quarter pounds, and one four pounds two ounces, both taken by Adam Goeltz, the well-known guide.

well-known guide.

DAROTA TERRITORY,—Deadwood. April 8th.—We have plenty of most all kinds of game, such as elk, deer, antelope, bear, mountain sheep, wolf, fox, rabbit, hare, prairie chickens and grouse, but no quail. Our club have sent to Minnesota for several hundred, and will turn them out on the Redwater and Belle Fourche, so that in a short time we will have good shooting. Ducks and geese are very plentiful. One cinnamon bear was killed the other day that dressed 760 pounds. One party went out to the Belle Fourche last week and brought back a wagon load of deer, rabbits and ducks too numerous to mention, being absent only three days. Fish are plenty and of all sizes, also fine turtles. In fact we have one of the finest countries for a sportsman in the west; every year will add to its interest. The weather is beautiful and spring is in full bloom.

PRACTICAL VALUE OF GUN TRIALS.—Philadelphia.

year will and to 18 interest. The weather is benutitul and spring is in full bloom.

PRACTICAL VALUE OF GUN TRIALS.—Philadelphia, Miss., April 2d.—I see many things in FOREST AND STREAM that please me, but what has pleased me most is Au Sable's gun trial for pattern and penetration, in its issue of March 4th. Now, I wish that more of the sports, men would give their experience in the same way, that their brothers who live in dark corners may have some light to guide them in selecting their game. S.P.N.

BUCKSHOT IN CHORF-BORES.—Houston, April 15th.—Last week a member of the Houston Gun Club received a 10-gauge, W. W. Greener's hammerless gun. This is the first seen in this section. Members meet to see it targeted. After finding it made good targets with small shot, ten shells were loaded with 100 buckshot that chambered three at muzzle, nine shots in each shell. 5drs, of powder was the charge. After counting the ten targets made at forty yards, we were supprised to find that the new gun had put ninety shot inside the thirty-inch circle, or a loss of one per cent, for each load. A well-known deer-slayer remarked, "That gun will fetch meat every time, if you hold her straight." ALMO.

WHOLESALE AND REFAIL DEALERS.—Portland, Me,

well-known deer-slayer remarked, "That gun will fetch meat every time, if you hold her straight," ALMO.

WHOLESALE AND RETAIL DEALERS.—Portland, Me., April 24th.—Editor Forest and Stream:—I am heartily glad that some one has had the courage to "speak out" about the practice of manufacturers and wholesale dealers in guns, ritles and sporting goods, in regard to the manner in which retailers are treated, and hope it will have the effect of bringing about a reform in this direction. As the business of many wholesale houses is now conducted, nearly every consumer knows the exact cost of this class of goods as well as the retail dealer. About every grocery-store keeper in the country, and others supposed to be in want of anything in this line, are supplied with price-lists with discounts stated therein, and some even go so far as to offer to send a single article on receipt of price named. This is manifestly unfair treatment of the retail dealer, giving him a chance only of picking up a customer now and then. I would suggest that the names of those who adopt this method be published, that the 'trade' may know how to discriminate in giving orders, only that it might be too good an advertisement for the wholesaler. However, if they read what has been, and may be, said upon the subject, they will learn that the retailers are after them with a sharp stick. I have noticed, in one instance, that in the case of a Ballard rille, the statement is made that no discount will be given, except to the regular trade. There may be others of the same kind, and, if there are, they are the very parties we are waiting to hear from. Keep the ball rolling. Down EASTER.

THE CONVENTION OF 1881.

BROOKLYS, N. Y., April, 1880.

Editor Forest and Stream:
At the Convention of the New York State Association for the Protection of Fish and Game, held at Rochester, July 7th, 1879, delegates from three of our local clubs united in an invitation to

delegates from three of our local clubs united in an invitation to that body to visit Kings County.

It was apparently so well received that we are encouraged to renew it, sincerely believing that its acceptance at the approaching meeting will promote the interests of the Association, and prove satisfactory and beneficial to the members who may partiake of our hospitality. Many of the individual sportsmen of the State know, and probably all have beard of, what we can do in the way of entertainment.

We urgo that the Convention of 1881 should be on Long Island for the following reasons:—

First. For sanitary reasons. The chemometer during the summer averages about 55 degrees. The cool sea breezes are pecularly invigorating to visitors from the interior. Experience demonstrates that the change from inland to seas-hove, and rice exercises.

perates to improve the general health for a long time afterward operates to improve the geometric floor will contribute to this result. We claim that our sea food—oysters, claims, lobsters crabs, bluefish, wealths and other varieties—cannot be excelled, if indeed equaled, in the world.

It indeed equated, in the world.

Second, Amusement and pleasure at moderate cost. We propose to hold the contests at Concy Island, or in the immediate vicinity of this world-renowed pleasure resort. It can be reached from New York City by five distinct steam raffroads, also by one horse railroad, and by steamhouts, which sail through our buy and Narrows, passing our islands— me fortified—and by the

ocean itself, to the wonderful iron pier, 1,100 feet in length. The fare is merely nominal. The time of the trip is about forty-five minutes, and hundreds of trains run each way daily, carrying thousands of passengers. There are many large hotels and resthousands of passengers. There are many hare hotels and restaurants, noticeaby the Manhatan, Brighton, Sea Beach, Pelace and Cable's, capable of dining at one time thousands each besides an almost innunerable number of smaller houses, at which refreshments of all kinds can be procurred at small exhibit. The tower, 300 feet in height, commanding a view of sea pense. The lower, so seen in neight, commanding a view of sea and land for thirty miles; minor attractions of every description, and unequated facilities for either surf and still bathing, exist. At Manhattan, Brighton, Cable's, the Iron Pier and several other places, are given open air free concerts every afternoon other places, are given open his free concerts every aftermound evening by the largest and bestarpointed bunds in this country, including the Gilmore, Dodworth. Downing, Philharmonic Orchestra and others, and such sole cornelists as Levy, Arbuckle, Salecdo and Liberati. Means of conveyance by hacks and by railroads along the occan in every direction are provided at five cents per trip. The city of New York contains hotels of every description, from palaces to those upon the European plan, at which good rooms, without board, can be obtained at prices as low as fifty cents per day. No city can show such elegant cheap dining-rooms, at many of which a satisfactory meat can be had for a numeric of adular, and even less. Objects of interest in the city dining-rooms, at many of which a satisfactory meat can be not a for a quarter of a dollar, and even fees. Objects of interest in the city and in Brooklyn, including the Navy Yard, public buildings, theaters and a variety of amusements exist to gratify any taste. Add to this the races held at least three times a week at Brighton and at Jerome Park, and commencing this year at the new tract of the Jockey Club, near Coney Island, where will be the greatest running races of the country.

Third Prizes. The bulk of the prizes always has come from Third. Prizes. The bulk of the prizes always has come from this section of the State. At least one-half of the wealth is here. Here is the headquarters of most of the manufacturers, importers and dealers in sporting goods of every description. Our merchants are public-spirited. We can promise prizes greater in number and far more valuable than have ever been offered anywhere. Besides the dealers, we have reason to believe that our Coney Island hotels and the various lines of travel will contribute

liberally.

Fourth. Convenience of access at reasonable farc.

Yould City Through Fairth. Concenience of access ar reasonante fare. Every main line of travel converges into New York City. Through fast trains run daily each way on both the New York Central and Eric roads, with every accommodation. It is easy to reach New York from any section. Delays and annoyances are generally encountered upon the branches which feed these main trunks. Commutation and from New York City can be readily obtained on the main

lines.

Fifth. This section of the State is entitled to consideration.

During the past sixteen years it has been ignored, and a circuit has been obtained in the northwestern, western and central parts of the State: Niggra Falls was favored in 1865, Buffalo in 1866 and 1878, Palmyra in 1866, Le Roy in 1867, Syracuse in 1869 and 1877, Rochester in 1870 and 1879, Utica in 1871, Senace Falls in 1872 and 1880, Batavia in 1873, Oswego in 1874, Watertown in 1875, Geneseo in 1876.

Geographically the Convention has confined itself to the follow Geographicary (no Convention as connect riser to the follow-ing counties grouped as adjoining each other: Niagara, Eric and Genesee; Wayne, Monroe and Livingston; Onondaga, Oswego, Jefferson and Oncida.

Why should it not come east and south of Utica? In a State of

Why should it not come east and south of Utica? In a State of staty counties, ten have monopolized it for sixteen years. Ought not same of the other fifty counties to receive attention? The ten favored counties, by the last census, contained about 750,000 people, while New York City and Lorg Island contained twice that number, which, according to the best estimates, has increased to about two and one-quarter millions. Ought not this section, with his vars population of about one-half of the whole State, to be selected as worthy of the honor of entertaining the Association?

Sixth. It would promote the interest of the State Association SEER. It would promote the Ancress of the Sance Association. Article I. of its constitution declares its purpose to be "securing proper legislation for the protection of birds, fish and animals;" also "the promotion of kindly intercourse and generous emulation among sportsmen." Cannot our two and a quarter million people render assistance? Those who have visited us can say whether the intercourse has been kindly. Ought it not to be extended ?

The feeling here is ripe to make the visit of 1881 (if we The feeling here is ripe to make the visit of 1881 (if we receive the Convention) memorable to all who participate. We believe that if this sentiment be encouraged by maning Long Island as the locality for next year, an enthusiasm will be aroused that will add to the Association many clubs, prepared to follow the subsequent conventions to all parts of the Stute. We do not seek, and will not ask, a renewal of this visit probably for many

Last year the State of New Jersey held its first convention and this year are shallow from the mass access. It received large support from us, and its success assured its continuance. On the other hand, the places uniformly solected by our State Association have been so remote as to discourage us. We desire to association the real preferences of the various clubs.

We propose to give them a cordial reception, and promise to try
to do the honors of hosts to the best of our ability. But we are
equally desirous that we sloudiwelcome them willing gruests, whe
share our hospitality in the same spirit in which it is profiered.
ADEL GROOK,

Secretary Long Island Sportsmen's Association.

ANOTHER OPINION ON TRAP-SHOOTING.

Editor Forest and Stream :-

In your issue of April 22d appeared an article headed "An Opinion on Trup-shooting," which I hope will bring out some able replies.

To my way of thinking, the arguments of H. W. DeL., that pigon shooting is funbecoming the dignity of a gentieman, that it is not a creditable performance, or that it depletes the number of wild birds, are not sufficient. It is a question whether we should confine all our actions to those which chance our dignity; the standard in time would become too high, and as to its nity; the standard in time would become too high, and as to its being a creditable performance, that would depend, of course, entirely on the conditions. It is hardly creditable in him, after promising to canvass both sides carefully, to contrast a pigeom-shooter killing ten unlikes, half-starved birds at twenty-one yards, with a duck-gun, with one of the most difficult shots to be met with in the field. If he had asked whether it was creditable for a man to stand at thirty yards from five traps, with a file, gun, loaded with 3idrs, powder, hoz, shot, and kill a rattling driver, with perhaps an anticance of two or three hundred people, it would be more la keeping with his description of a cock grouse hunting through the thicket. His fear that trap-shooting will deplete the number of wild birds is also, I think, without foundation, because the opportunity to catch them is limited to two

months of the year, and they are too delicate to stand much transportation or handling. Without doubt they are caught in great numbers for the market, but the proportion that run the great numbers for the market, out the proportion that run the gauntlet of the traps is small, as 90 per cent, of birds killed in pigeon shooting are domestic. I hold that the question of trap-shooting is not a subject for discussion, except as we discus-other phases of field sports for the entertainment to be derived

therefrom, and not as to whether it should exist or not.

If it is proper for us to shoot game or catch fish for excitement or pleasure. It is proper for us to shoot pigeons from a trap for the same reason, and if you do away with one you should with

The principal argument against pigeon shooting is its crucity, but how much better off is field shooting? It every bird wounded in the field and left to die was witnessed by hundreds and duly recorded in the papers, how long would it be before it would be decried and an effort made to suppress \$1? For the number of wounded birds in the field that escape far exceed that of pigeons, because the opportunity to hide is not so great, and the ubiquitous outsider soon settles the fate of a wounded bird.

No one disputes the fact that it would be better if no life were

sacrificed for pleasure, and it would be a sweet comment on our human nature if it were so; but the fact remains, that an inherent love of the chase has existed from all time in the breast of man, will always exist, and hence is an element of sufficient positive-ness to domand recognition in all discussions of this kind. It is a hing that cannot be put aside by an act of Legislature, and if it crops out in certain localities with a desire to shoot pigeons from a trap, it should be permitted and respected, if we permit men in other localities, who have the opportunity, to shoot game for pleasure.

If we all lived in a game region, and could keep the wire edge If we all lived in a game region, and could keep the wire edge of our inherited desire worn smooth, there would be no excuss for trap-shooting; but men of the city, who at best can get but a few days of the year in the field, are forced to go to the traps to still that intense longing, which comes over us at times, to handle a gun and feel the play of the triggers. Of course I do not compare pigeon shooting with field shooting, except as to the result in both cases birds are killed. All the glory of nature which surrounds field shooting, and which gives to it all its poetry, is wanting in pigeon shooting. It is only when at that moment we move we feel the dogs and our knowledge of surroundings becomes up to the dogs, and our knowledge of surroundings becomes blurred and indistinct with the intentness with which we watch

blurred and indistinct with the intentness with which we watch for the springing of the game, that the two approach each other, otherwise there is no comparison.

H. W. DoL remarks that the glass ball completely takes the place of pigeon shooting. He might with equal good grace say it took the part of field shooting. Glass ball shooting is like a problem, when you have mastered it you are done with it.

Providence, R. I., March 27th.—Editor Forest and Stream:—Your telegram of Feb. 26th, asking about the pigeon shooting law in this State, has just come to hand on my return from Florida. It

this State, has just come to main on my rectura from Frorica. It is a triflic late to answer it, and of course you know all about it now. "This true," it's pitty, and pitly "its, "tis true."

Inns orry! was away, for perhaps something could have been done to stop it among our "conscript fathers." I am only sorry on account of the gum club at Newport, and I fancy that another

on account of the gui cutout awayort, and I may that another year may work a change.

This sort of business has gone too far, and the society with the long rame will lose more than they will gain in the long run by such action. We shall see. As I said, I have only just returned from Florida. I started from Key West, and worked my way in a small boat from that point to Tampa Bay, a part of the country none of your correspondents seem to have looked intumuch, and that was why I went the route.

N. D.

PIGEOR TRAY SHOOTING.—Columbus, Ohio, April 24th.—Edito Forest and Stram:—I do not think the ably written article of "H W, Dz. L.," in your number of the 22d inst., on "Trnp Shooting, requires anyone to come to his rescue, as he has expressed in clea and concise terms my idea in what I consider an unsportsmanlike amusement. I merely wish to be recorded as being of the same faith, and am pleased to know the ranks are each year being augmented from the better class of sportsmen.

FIGURE N. BERN

SHOOTING MATCHES.

Natick, April 24.-The Natick sportsmen met at their grounds to-day, and in larger numbers than before. Four of Cochituate's marksmen, Bent, Loker, Leach and Cochran, took part with them

Match.-Philadelphia, April 24th.-In issue A PHILADELPHIA MATCH.—Philadelphida, Aprill 20th.—In issue of March-4 th was published the pigeon shoot that took place here on Feb. 28th between a party of gentlemen (six in number) at 15 single birds cach, 26 yards risc, 1(20. shot. In said mutch Mr. Sharpe and Mr. Levis tied on 15 birds straight. In the shoot-off Mr. Sharpe killed 8 to Mr. Levis 7, and won the match. Mr. Levis not being satisfied, challenged Mr. Sharpe to shoot him. Levis not occur satisfact, changed Mr. Sharpe to shoot him a match at 25 birds each, 26 yards rise, 29 yards bounds, Hoz, shot, use of one barrel only; he (Levis) to find birds for both. Mr. Sharpe promptly accepted the challenge, but owing to various causes the shoot did not come off until Saturday last. They shot for price of birds and supper for six. The birds were a lively lot, but only two out of the fifty got off scot free. Mr. Levis shot a Scott breech-loader, No. 10; Mr. Sharpe, a No. 12 muzzie-loader. as follows:

VHRIA.—Potsmouth, April 18th.—Regular weekly shoot of the Scaboard Shooting Association at glass balls, from Card's ro-tating trap. Prize for marksmanship was finally awarded to Capt, II. L. Cranner. The prize was a beautiful gold badge, designed by James F. Carr, Esq., of this club, and consists of an engraved scroll, hearing the word "Champion," beneath which are crossed shoteuns. Pendant by chains from the pistol grip of the guns i the badge proper, surmounted by a round scroll, and richly chased, bearing in the center the figure of a pigeon flying, inclosed by a wreath, and surmounted by the legend, "The Scabbard Shooting Association of Portsmouth, Va." The following is the

GULF CITY GUN CLUB.-Mobile, Ala., April 22d,-Owing to the Guille of Mr. W. W. Judy, of St. Louis, to fill positive contract made with him Jan. 30th, and not being notified of his inability to do so until April 20th, and hot being notified of his inability to do so until April 20th, and being unable to precure birds olse-where in United States, necessitates the postponement of our tournament until further notice. G. W. TINSTALL, Chairman Executive Committee.

Chairman Executive Committee.
Cincinnati German Shooting Club.—Cincinnati, April 20th,
—Monthly score for contest of gold medal. The weather was all that could be desired for a good score at pigeons. There were fit-teen contestants, among them some of the best enack shots in the city. The pigeons, considering they were tame ones, were pretty spirited and good goers. The medal was presented to Mr. J. Moerfein by the former holder, George Reif. Referees: Col. Geo-Twachtman and Senator Calhoun, of Carthage, O., and Judge W. E. Limbig. 21 yards rise; 59 yards boundary. The following is the score:—

Boston, April 24th.—Walnut Hill presented an animated appearance to-day. Besides the regular competition in the Everybody's match, the long-range targets were opened and the long-range men were out in good numbers. Among them were Mr. Frank Hyde, Col. Clark and Mr. Dudley, of Now York, who have won envisible reputations at Creedmoor. The early morning gave indications of a capital day for the sport, the sky was overcast by the darkest of leaden clouds, which produced a good light, and the targets stood out boildly. The wind zave no trouble to the short-range men, as it was gentlein its force and easily controlled, coming from the northeast and registering upon the dial 3 to 4 o'clock. In the afternoon the weather conditions improved, and capital work was done. The clouds broke and the sun shone at intervals, reading up elevations. There were 105 entries, only the best being given in the subjoined summary:—

Boston.—The long-range shooting at Walnut Hill opened on April 14th, with the Massachusetts Rife Association's Long Range Randteap Match, open to all comers, distances, 800, 800 and J,000 yards; lifteen rounds at each range, with handleap as follows: Competitors with a record of 206, but not over 213, allowed on each score 4 points; those of 205, 10 points. All competitors must enter fivo times to make a score, and the amount receive in ex-

cess of expenses to be divided into three prizes. Match to be shot on successive Wednesdays until closed by the Executive Com-nitive. The match of the 14th was the first of the series, and had nine competitors. The day was pleasant, but the wind-range was from 1 to 5 o'chock and most uncertain, while the clear sky and bright sou produced a mirage. The score for the first contest -! fronts

The first shooting of the third series will take place the 17th of May, at the same place.

New Jersey.—The Stockton Rifle Association, of Camden, has arranged an attractive day for shooting for May 18th, calling it their "May Day" Meeting. The programme, opening at 10 o'clock, includes the following matches:—

Regimental Team Match. Prize, a set of silver, value \$50; teams of ten from any regimental or battalion organization of the National Guard of any State; 200 and 500 yards; seven shots at each;

any military rifie.

Company Team Match. Prize, set of cilver ware, value \$30 teams of four from any company in the National Guard of any State: 200 and 500 yards; five shots at each; any military rifle. Stockton Rango Match. Prize, trophy, value \$30; all comers, any rifle; 200 yards; military rifles used as such without cleaning

allowed two points; seven shots; re-entries.

National Guard Match. Prize, a gold pin, value \$10; members of the National Guard of any State in uniform; 200 yards; any military rifie; seven shots.

Matches on the Range will be had each Tuesday, Thursday and

Saturday during the month of May.

Washington, D. C., April 24th.—A cloudy day, with promise of heavy rain, found ave marksmen on hand when the third subscription long-range match of the spring season was called. As the men were about to begin the rain came down, and postponed the match for a tedious hour. It let up, however, at 3 o'clock, and remained charitatly disposed through the shooting, favoring the riflemen with a continuous dull gray light, although the wind was somewhet tight. Mowing across the wayers from the worth. was somewhat tricky, blowing across the range from the north-east with shifting and gusty tendencies. Elevations were good, and soon found, atthough Mr. Adee was the only one to strike the white ow at the start. His cleven bulls made the largest string of the day, and his total of 74 was the best at the shortest stage, of the day, and his total of 74 was the best at the shortest stage, Mr. Lauritzen pressed him closely, dropping only two red-birds after he got fairly on; while Dr. Scott held well for a good 71. The 900 yards' stage saw poor shooting for all except Mr. Lauritzen, who pounded away, bringing up the white fourteen times and missing the honor of a clean score through shoer ill-luck by an untoward center on his seventh shot. Only two of the five mer reached the 70s at the longest distance, Mr. Lauritzen again being reaches the issuit a fest-class taily of 3, yielding him the admirable total of 219—the pset made at Beaning's this year. Dr. Scott's usual high average shooting gave him 30, which ought to have been at least four-points better but for the sudden gusts. Mr. Adee's 205 contained a miss, due to a careless blunder of fire Agee's 200 contained a miss, due to a carciess bilinder of five points' elevation on opening the shooting at 1,000 yards. Mr. Waiter Scott, the Doctor's brother, a promising young shot, who although nota member of the club, joined in for companionship, scored a creditable 200, with an unaccountable. The fine-shooting of Mr. Lauritzen shows that he is rapidly getting over his winter's rustiness, and gives hopeful promise of his keeping up to his high averages of last year, his 223 on Oct. 18th being the best long-range match record hitherto. The following are the lead-

FAISE NAMES.—Valley Force Terrace, Pen., April 20th.—Editor Forcet and Stream:—Looking over Fourser And Strigan I read, among many other good things, that keen article on "False Names," by "Nick." It made me wish, like Seth Oreen, that I had an "india-rubber arm," that I could reach right over to "Nick" and take him by the hand, and say to him, "Those are my sentiments exactly." I think of recructions and sports as of business, that no gontleman should engage in a species of either if he is afraid or ashamed to see his name in connection with it. I am not a rifle shot, but am a member of a live gun club, and I would as soon admit that the mercantile business in which I am engaged is discreditable, and carry it on under an alias, as I would acknowledge that our weekly ball shoots were not quite the thing, by retusing to permit my name to be attached to the score. FALSE NAMES .- Valley Forge Terrace, Pa., April 20th .- Editor

I think that gentlemen shooting under assumed names cast suspicion on our sport, and I protest. One of the strongest checks we have against the abuse of the range and the trap is our char-acter as gentlemen, and surely that cannot be served under a false name.

Stand by the position you have taken; you have hosts of supporters in it, and Forest and Stream is a power in the land that commands respect wherever it is read.

BOSTON, MASS., April 24th.

Editor Forest and Stream :-

Your issue of the 15th contains a timely letter signed by "Nick." your issue of the both contains time; letter signed by "Nos," who, "you have so of false names at the rifle range. Some expressions from different riflemen upon this subject through your columns may do much to mitigate this growing evil. Now I do not believe that fraudulent names can be entirely done away with, but think the system advocated by W. H. Jackson can be done away with, i.e., the liberty to use a false name when the shooter likes. This is a plan which is taken advantage of in almost all eases whore a bad score has been made, and then it seems perfectly astonlablag

how quickly the owner of a lead or bad score finds out that his friends have noticed his name too much lately in the papers, and it will be advisable to have the bogus one inserted; and the honest shooter, who, with his proper name, may have been heater nonest snooter, wad, with his proper name, may have been ceated in the previous records, finds out that now it is his turn, he only wins over some false names. This method had advanced to a high state of perfection last year, when, to the credit of the Mas-sachusetts lidie Association, they took the buil by the horns and made it a law that whatever name a person entered a match with should be upheld through the same. Although this law has been broken a few times since its adoption, it has been the means of doing away with much of the previous injustice. The only alternative now to escape detection, is not to finish a single scor ferentiative of the day, which, before the last shot on the score is fired, does not give evidence of being a good one. The layout of Sportsmen? Cit's much being a good one. The layout of the best withdrawn score, which is doing justice to all the shooters the two following rules are in the interests of all riflements and glassball shooters :-

1. The name under which a competitor enters must be con In the event of unfinished score or scores, the best be re-

The adoption of these rules by the Raymond Club has reduced The adoption of these rules by the thirts.

ORIGIN OF THE TERM "RILL'S-EVE "-The New York World ORIGIN OF THE TERM "BULL'S-EYE."—The New York World, in its Notes and Quories of April 18th, asks: "What was the first form of the center of a target, and why was it called a bull's-cye?" "Bibota" responds: Authorities differ on this point. The other writers say that the target was originally a small shield. Congreve says it was squure, while Worcesier says it was large and round. One thing is certain, its use as a word in the sense of being anything but a shield is of very modern date. The word "bull's-eye is equally modern. After a considerable comparison of authorities I have arrived at the following conclusion: That a travest rare, called from its recombines to the state of the sta target was so called from its resemblance to a shield; that the term "bull's-eye" was first applied in naval gunnery. It was already a naval term, being used as a name for a thick piece of glass inserted in the deck to give light, and which was generally of an oval form. The center of the target, as commonly used being of the same size and shape, the same name was given to it.

being of the same size and shape, the same name was given to it.
"Uncle Toby" asserts: The Tartars, famous for their use of
the bow, teach their youth to shoot at a mark made of hide,
plerced in the middle. This is probably the oldest form of target,
Such were in very early use among the Saxons, and afterward
those painted with rings and a white spot. From the Saxons we
have the term 'buil's-ey, the word "buil" or "boil" being applied to anything circular. In Scott's description of the archery
contest ("I yranhee," chap. xiii), the target is described as marked
with rings and naving a white spot in the center.
"Delta" is another one who has worked out a response as fol-

" is another one who has worked out a response as fol "Delta" is another one who has worked out a response as fol-lows: The old name for the center of the target was the "clout," and it was always painted white. The piece of wood which held it on was called the "pin" and marked the exact center. The "clout" is supposed to have been so called from a piece of cloth having been at first used to mark the center of the target, clout" being the old name for patch or rag. Target was forhaving been at first used to mark the center of the target, 'clout' being the old name for patch or rag. Target was for-merly the name for shield, and it is probable that a shield used at first to be set up for a mark. Shakespeare speaks of "hitting the clout" in "Loves Labor Lost" and in "King Lear," and we have still the expression "to hit the white." The central mark of the target was probably always round or ovul in form, and of the target was promany always round or oval in form, the thus the name of bull's-eye was given to it, as it is applied for the same reason to many other things, among others, to the round, old-fashioned watches worn by our grandparents, to the round windows put in the roof for ventilation (hence the name "effi-de bout" given to the ante-chamber at Versailles), and to the

de bosult" given to the ante-chamber at Versällies), and to the old-fashioned plate-glass from the round knob left in the middle by the end of the pipe through which it was blown.

A Creedmoorite puts the following explanation upon it: Everybody knows that, sometime B. C., George Wood invented the target now known as "The Tramp" target. It differed, in those days, from the one now in use, in having a mammoth poster of a bull, and his eye was the central point (metaphorically speaking) aimed at. No charge for information.

Archery.

MICHIGAN ARCHERY TOURNAMENT.—The first annual meeting of the Michigan Archery As-ociation will be held at the Recrea-tion Park in Detroit, June 23d and 24th next. Medals will be con-tested for at the Double Columbia and Single York rounds. Handieaps: Ladies, 30 yards; gentlemen, dyards. Team shooting at the Columbia and American rounds. Matches not confined to srebers in the State, but open to all, will be shot at the English and York rounds. From pledges already made the committee feel safe in saying that prizes to the amount of over \$1,000 will be offered. Constitution and rules furnished on application to Dr

offered. Constitution and rules furnished on application to Dr W. H. Durance, Jackson.

The success of the meeting is a matter of interest to every person interested in this clegant and invigorating pastime, and clubs Intending to participate in the tournament should lose no time in Joining the State Association. More than one hundred prizes will be offered, and it has been the aim of the committee to arrange that they may be evenly distributed, and not all carried off by a few superior bowmen.

The professional element will, as it has in all other American sports, detreaf from the amusement as a pastime, and should not

sports, detract from the amusement as a pastime, and should not be encouraged. No archer need fear to compete, for all Michigan clubs are young, only two of them having over taken part in a tournament. Persons wishing to perfect their shooting will find this meeting a rood place to get points. Assurances have been received that Will H. Thompson and other prominent arch peer received that with A. Hompson and other fromment areas will attend. The committee are desirous of putting programme and other matters of interest into the hands of every club in the State, and to that end carnesity urge clubs not belonging to the Association to furnish the names and location at once whether they intend to join the State Association or not. E. T. CHURCH,

Chairman Executive Committee M. A. A., Charlotte, Mich. Short Hands Prayeros,—Galeburg, April 5th.—Editor Forest and Stream:—The communication from "L.W.," giving the effect of short-range practice upon long-range shooting, has led me to think that to some of your readers my experience of the effect of long-range practice upon short-range shooting would not be altogether uninteresting.

gether uninteresing.
All my practice the past winter has been out of doors, and, until
Feb. 21st, at the York Round. Then, owing to the dilapidated
condition of my arrows, I shot the American Round several
times. My last record in 1879 at this round was 73-358, my best

8-333. My first in February was 33-411, my best 35-445.
Last Saturday I would not shoot at the long ranges, as a friend

bad carried off my finger-tips; so I shot d la mode de New York i. c., 90 arrows at 30 yards. My fingers burned before I had finished te, marrows actory arus. My ringers burned neither find mission thy score, but I persevered. My record is 90-616; IFSE 34, 202; Second 30, 203; third 50, 206. A moderate wind was blowing across the course. By the way, I find that the wind annoys me most by its effect not upon the arrow after it has been loosed, but upon my bow-arm before loosing.

now-arm before loosing.

I should like to ask the experts a question. Is a good bow for the long range sure to be a good one for the short? My own shooting at the long range is relatively better than at the short. and I am inclined to explain it by the construction of my boy The lower arm is much the upper, and it is to this I attributed—though I am quite likely to be all wrong—the necessity of aming below the gold at 30 yards. There is a very perceptible rise of the arrow as it leaves my box. This I do not notice at the longer targes. Of course it occurs, but I think it escapes at the longer ranges. Of course it my notice in the necessary elevation.

my notice in the necessary elevation.

My best 30 arrows at 39 yards scored 208; at 40 yards, 182; at 50 yards, 118; at 60 yards, 117; at 80 yards, 100; at 100 yards, 70. I should very much like to know whether I had better have the lowerarm of my bow weakened a trifle. The bow is a strong one every way-54 pounds honest measure.

I am aching to write something further upon the plan of corand adding to write sometiming turtner upon the plan of cor-rections to neutralizo partially the element of chance at the longer ranges, which I proposed in a former communication, but courage fails me. When the present storm, which found vent in "T. A. L's" admonitions, has blown over, perhaps I shall ven-T. R. W.

NEW YORK ARCHERY CLUB.-The New York Archery Club will begin practice on its grounds in Central Park May 1st, aud, we understand, will be in a condition to receive an increase of mem-bership. The Secretary, Mr. James W. Auten, Jr., was appointed ate to the meeting of the Eastern Archery Association. It d that the next meeting of the Association may be held in delegate to the meeti is hoped t this city.

Cricket.

-The Belleville, Ont., Cricket Club held a meeting on April 9th and resolved to put the old grounds on the bay shore in order again. The prospects for the coming season are unusually good.

-Philadelphia cricketers have been hard at work for three weeks past, and the Staten Islanders commenced their practice on Saturday last.

-A new cricket club has been formed in Brooklyn, and the Brooklyn Park Commissioners have granted the new organization which is called the Appleton C. C., permission to play at Prospect Park, and have also kindly promised to do all they can to adva

Fars, and have also kindly printised to do an they can to advance their interests in cricket.

—William Brewster, for many years the excellent professional of the Staten Island C. C., is desirous of securing an engagement for the season. Communications can be bad with him through this office.

AVERAGES FOR 1879.

TRINITY COLLEGE, OF TORONTO

TRINITY COLLEGE, OF TORON IO.

SUMMARY OF MATCHES.

Out of eight matches played by this University in 1879, two
were won, three lost and three unfinished—two greatly in favor

of Trinity

W. Merritt getting I and 9. For Trinity, Dr. Spragge hit brilliantly for 72, and Irving carried out his bat for an admirable in

llantly for 72, and Irving carried out his bat for an admirable inmungs of C2; D. Howard took's wickets, and Campbell in the unfailshed innings bowled 35 balls for 1 run and 1 wicket.

13 and 61 market.

14 and 20 market.

15 Trinity.

16 will will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 16 will be 17 will be 17 will be 18 will be 1 the visitors. Dunley's 25 was the sole double ligure on the win-ning side, Howard (12 and 9) heading the losers, for whom Camp-bell bowled 45 balls for 3 runs and 2 wickets. Sendding and Ken-nedy divided the wickets for North. June 24, at Whit- | Trinity. 32 and 59 by Whitby 84 and 8 (no wkits down)

Drawn. Allen's brace of 13s and Allan's 19 (not out) in the second essay were the only double figures for Trinity. On the part of the School, Stennett scored 16 and 2; Billings, 2 (not out) and 43; Wood, 8 and 16; Roberts, 12 and 0; Jones, 9 and 6. Roberts, 12 and 0; Jones, 9 and 6. Roberts, 12 and 0; Jones, 9 and 8.

Loss by an innings and 35 runs. The noro of this match was H. C. Simonds, who scored 86 (not out) in first rate style, Robertson, 10, the last man, being the only other of the side to reach double figures. Ferrich and 13 wickets at a cost of 39 runs. 1.0, at (6 wickets for 59 runs) bowled well for Trinity, for whom Sp aggre scored 4 and 10; Irvlog. 5 and 12; D. Howard, 11 and 0.5 pages.

LILLYWHITE'S CRICKETER'S COMPANION.-To sit down to review this wonderful compilation of last year's cricket is something like donning the flannels and going out with an eleven in the field. We look around and there are all our heroes of bat and ball as lively as spring. For scorer no one could be more at full than Mr. Lillywhite, who is quite as familiar with the cracks of the present as he made one of that class in the past. It is an excellent book, well delited and published by na old hand-that the issue before us is the thirty-sixth edition of the Crick-eter's Companion and Guide, is a proof of the value and popular-ity of this old cricket magazine. Open it where you will, there is something of interest, correctly given. Besides a review of the season of 1879 by the editor, there are leading articles on bowling, slow and fast, by Messrs, Buchanan and Freeman. The Hon, R. H. sow and rask by success, normalization freemant. The front R, H. Lyttlefon has a say at international crisket—American, Canadlan, and Australian. Mr. Thornton does for the public schools, while Mr. Absolom describes the visit of his team (Lord Harris) to Australia. Nothing is forgotton—counties, universities and all; the laws of the game bringing the two hundred and eight pages to a close. The little book can be had of John & James Lillywhite & Co., 10 Seymour street, Euston Square, N. W., London, Eugland. Price one shilling.

-The St. Thomas Cricket Club, of Canada, have reorganized for —The St. Thobas prises Collo, of Canada, nave reorganized for the season, and at a recent meeting the followin officers were elected for the coming season: Patron, Rev. G. G. Halkard, M. A.: Hon. President, D. Gustin; Hon Vice-Presidents, B. W. Gossaye and Jobiel Mann; President, C. O. Erminger; Vice P. seident, H. D. Wilson; Hon. Seoretary, R. H. Smith; Tressu.

-Messrs, John H. Mann & Co., of Syracuse, write us that the demand for their Trolling Spoon (especially the Perfect Revolving) has been so large as to occasion a slight delay in filling orders, but that by the 15th of May they will be able to fill all orders as fast as received. See advertisement.-[Ade.

-Edward P. Kremer, Lebanon, Pa., writes: "I His your explosive bullets very much. They can be carried to the field in a very small compass, indicate very quickly when they are hit, and, owing to their vibratory motion when in the air, become, in my opinion, more difficult to hit, and ansomently better practice than either glass or

James M. Green, Washington, D. C., writes: "1 like your explosive balls much better than glass. I will take great pleasure in recommending them to my friends. They fill the bill ex-

NEW OBSERVATORY,-The always reliable Rochester (N.Y.) Union and Advertiser gives the following news to the public :-

gives the following news to the public:—
We state it with pleasure, as it is a matter our citizens cannot be otherwise than proud of, that the "Warner Observatory" is finally located; that the premises upon which it is to be erected are purchased, and that ere another month is past the buildings will be in course of construction. The ground selected and purchased is the property known as the Langworthy lot, corner of East avenue and Arnold Park.

A location handsomer and more convenient of access could not have been se-

for, corner of Estavenue and Armond Fairs.

A location handsomer and more convenient of access could not have been selected. We learn that the apparatus needled for the observatory is now nearly completed and will be ready by the time the buildings are in condition to receive it. To debted for this grand institution. H. H. Warner, Esq. is the party who supplies every dollar of the amount needled to organize and equip the enterprise spoken of. Mr. Warner is at the head of the firm of H. H. Warner and Co., who are the proprietors of the now world-famous Warner's Safe Eritle, Warner's Safe Bitters and others of Warner's Safe resultions. The plans and specifications for the buildings are now being drawn, and soon the contract will be ing drawn, and soon the contract will be awarded for the building.—Adv.

PURITY OF FAMILY MEDICINES.

THE writer in his visit to Rochester has had the pleasure of meeting with "Hop Bitters." an entirely different compound from those almode to. It is five years since their arrifas were holded to. It is five years since their arrifas were their their compound from those almode to. It is five years since their arrifas were their consistent of their control of thei

A Voice from the Press.

I take this opportunity to lieure testimony to the efficacy of your "Hop Bitters." Expecting to find them huseous and bitter and composed of bad whisky, we were agreeably surprised at their mild taste, just like a cup of tex. A Mis. Cresswell and a Miss. Comon, Irlends, have likewise treet, and pronounce them the best medistrength and toning up the system. I was troubled with costiveness, bacdache and want of appetite. The two former almonis are gone, and the latter greatly improved. I have a yearly contract with a disposal contract with a

July 25th, 1878. Pittsburg, Pa.

*Bay City, Mich., Feb. 3, 1880.

Hop Bryters Company:

I think it my duly to send you a recomment of or the benefit of any person wishing to know whether Hop bitters are good or not. I know whether Hop bitters are good or not. I know they are good for general debility and indigestion; strenghten the nervous system and in ike new Hife. I recommend my patients to use them.

Treator of Caronic Diseases.

I heard in my neighborhood that Junn, 1880.

I heard in my neighborhood that Junn, 1880.

Bittees were doing safe exceeding and among the sick and afflicted with most every kind of discess, and as I had been troubled for fifteen years with neuralgia and all kinds of rhematic complaints and kindsy trouble, I took one bottle according to directions. It at once did me a great deal of good, and I used another bottle. I am an old man, but am now as well as I can wish.

LEONARD WHITE BECK.

HOP BITTERS COMPANY:—Gentlemen—having been afflicted for a nu ber of years with indigestion and general deb-ty, by the advice of my doctor I used they test, and mixt say they afforced the thingest, stant relief. I am glad to be able to testify their behalf. Thos. G. KNOX

Ladington, Mich., Feb. 2, 1880.
I have sold Hop Bitters for four years, and there is no medicine that surpasses them to ribilious attacks, kidnoy complaints and many diseases incident to this malarist climate.

H. T. A LEXANDER.

Pauiding, O., Jan. 2, 1880.

Hop Bitters Company:—
I have used your Bitters, and must say they HOP BILLIAM
I have used your Bitters, and must say holped me materially.

John Field, Infirmary Director.

Ashburuhan, Mass., Jan. 14, 1880.

I have been very sick over two years. The all gave me up as past cure. I tried the use skilitul physicians, but thev did dot reach the worst part. The lungs and heart would till uvery night and distress me, and my throat way vory bart. I told my ordinal Hop littless. I have taken two bottles. They have believed we were well as the latest when the latest way but the latest we have believed in the latest way but the latest way but the latest way but the latest way but the latest way but the latest way but the latest way but the latest way but the latest way but the latest way but the latest way but the latest way but the latest way but the latest way and t

Mrs. Julia G. Cushing.

Battle Creek, Mich., Jan. 31, 180.

I have used seven bottles of Hop Bitters, which have cared me of a severe chronic difficulty of the kidneys and have had a pleasant effect on my system.

RODNEY PEARSON.

Wathend, Kan., Dec. 8, 1859.

I write to inform you what great rehet I ge
from taking your Hop Blitters. I was suffern
with neuralpia and dyspepsia, and a few both
have entirely cured me, and I am truly thankt
for so good a medicine.

Mrs. Mattle Coopen.

Color Diput, Tec., Oct. 28, 1879.

Hor Bitters Company:—
I have heretofore been bitterly opposed to any medicine not prescribed by a physican of my choice. My wife, fitty-six years old, had compared by degrees to be a proper of the color of the property of the color of the property of the color of the property of the color of the property of the color of the property of the color of the property of the color of the property of the color of the property of the color of the property of the color

New Bloomfield, Miss., Jan. 2, 1880.

Hop Bittees Contents:

I wish to say to you that I have been suffering for the last five years with a severe itching all over. I have heard of Hop Bittees and have tried it. I have been up four blottees and have tried it. I have used up four blottees and have tried it. I have been up to but seed to be a more and the second of and poor but feel to bicss you for such a moid and poor but feel to bicss you for such a moid and poor but feel to bicss you for such a doctors. I have had fitted and toracent of the doctors. I have had fitted and to resente; and there took four quarts of blood from me. All they could tell was that it was skin sickness. Now, after these four bottlee of your medic ine, my skin is well, clean and small processing the second of the s

DITTMAR POWD

Champion Shot Gun and Rifle POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, (r noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. CaptainBogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

Grand Halls, Hew Brunswick.

S you must have many readers who, deriving information and amusement weekly from your columns overlook their obligation to contribute their quota to the general fund of information interesting to sportsmen and tourists, I desire (being myself an arch offender in this respect) to cast off my burden of ingratitude, which encumbers my soul, and gain absolution by offering some suggestions to my fellow readers, anent a corner of the earth which seems little known to the "Walton's" or "Cotton's" of this continent, and also a terra incognita to the blasé children of fashion, who have long ago voted Niagara a bore, and Saratoga, Long Branch, etc., "played out."

To all s uc I would recommend a trip, this coming summer, to Grand Falls, New Brunswick. I fancy I hear scores of anxious voices asking "Where on earth is that, and how shall we get there?" so here goes to supply the information. From Boston, take the Eastern Railway to Portland, thence by Maine Central Railway to Bangor, there connecting with the E. and N. A. Railway for McAdam Junction, there taking the New Brunswick and Canada Railway to Woodstock, and thence by New Brunswick Railway to Grand Falls; the whole distance being about 400 miles. Baggage can be checked through from Boston. Should time not be an object, this route can be varied by taking steamer from Boston or Portland to St. John, N. B., from whence (after due admiration of the public buildings) let the tourist hie him away to Frederickton, where he will most likely have to stay over-night. The hotels are, however, good and reasonable, and the city, being the seat of laws and learning, and noted withal for the piety of its inhabit-ants, the brief sojourner will doubtless improve his moral and intellectual tone, especially if he should perchance hail from the wicked regions of Wall street, or some other shrine of Mammon,

Being now in proper trim to enjoy the beauties of na ture, he will take the New Brunswick Railway for Grand Falls. This line has ovidently been constructed with a prospective eye to the welfare of pleasure seekers, as it winds snake-like along the banks of the river, and in its

sinuous course enables the eager traveler to take in the beautiful woodland scenery to be found in so many places along the route. Arrived at the Falls, no vociferous and extortionate backmen salute the ears of the weary traveler with their clamor, nor will he be torn limb from limb by energetic touts. A civil young gen-tleman may indeed proffer his services to take checks and escort one to the hotel bus, and there the trouble ends, for in five minutes we may be smoking a cigar with mine host Herbert, as genial a New Englander as ever it was my fortune to meet. A retired sea-captain, he possesses a fund of anecdote and a most refreshing flow of spirits; and, if one enjoys real hearty good-humored chaff, he may have his fill at the "Captain's" hands (or mouth) to the heart's content. The Grand Falls Hotel is amply furnished with the requisites for the comfort of the tourist and his family. Good rooms, a capital cuisine, and excellent attendance, are all to be found within its portals, and to crown all, you will never make a wry face when your bill is presented.

As for the falls, I must confess that my usually facile pen fails me in the attempt to describe them. Niagara, with its vast unbroken sheet of water falling from a stupendous height, impresses us with a sense of awful sublimity, increasing as we gaze upon its wonders; but for rare charm and exquisite beauty the St. John River cataract stands without a rival. The immense mass of water, pitching from a precipice eighty feet high, hurls itself into the boiling cauldron beneath, its bulk being broken in the descent by jutting rocks into a thousand fantastic shapes and feathery spray, which in the bright rays of the sun produce bows of surpassing brilliancy. Below its plunge produce bows of surpassing brilliancy. Bellow its plunge the river (before a broad and smooth expanse) is confined in a narrow gorge, in places not more than thirty feet wide, hemmed in by huge and beetting cliffs over 300 feet high frowing on the water beneath, which, for three-quarters of a mile, rushes along in mad carer, surging and boiling with frightful force and turbulence, till it reaches a spacious basin beneath. In this gorge are to be seen five large natural wells from thirty to forty feet deep, and lifteen feet in diameter, worn by the action of the water as smooth and symmetrical as if hewn and polished by the most skilled artificer; also, an enormous cavern hollowed out of the surface of the cliff. Still lower down the stream, the eddying water forms a whirlood called the "Coffee Mill," within whose gaping jaws logs of large (size are drawn and gradually crushed to matchwood. A commodious stairway is provided to descend and view these wonders; descending which we reach the water's edge, and gaze upon the weird and uncouth forms assumed by the furious watery element, while above, the sky is seen only as a narrow strip of blue, the luxuriant foliage surmounting the wall-like cliffs, seeming almost to meet overhead. The view by moonlight, with the pallid rays feebly struggling to pierce the somber gloom which envelopes river, rock and tree, is simply indescribable. The lumbering operations, carried on so extensively up the river, necessitate the logs being sent over the falls, they being afterward secured and rafted in the basin below. Standing by the fall, we can see immense trees take the plunge, often remaining below the surface for a minute, when they shoot up such as the surface for a minute, when they shoot up such as the surface for a minute, when they shoot up such as the surface for a minute, when they shoot up such the river (before a broad and smooth expanse) is confined

is simply indescribable. The lumbering operations, carried on so extensively up the river, necessitate the logs being sent over the falls, they being afterward secured and rafted in the basin below. Standing by the fall, we can see immense trees take the plunge, often remaining below the surface for a minute, when they shoot up suddenly, twenty or thirty feet above the water, like some great monolith reared on end, falling back with a tremendous splash into the water.

But I am forgetting, in my enthusiasm, all about the angling to be had in the neighborhood, and such angling! Ye gods and little fishes! No, not little fishes, but great histy, hard fighting trout abound in the numerous streams and lakelets, within an hour's drive from the village. To describe or locate all those would fill a book, and naving, I fear, been already rather profix, I will simply suggest to the lovers of the angle coming this way the necessity of filling their books with suitable littles for the unsophisticated piscines, and above all things not to forget their landing nets, or woe betale them when they get among the two or three pounders. For off days there are plenty of pleasant drives, notably to the Dominion Salnon Hatchery, about three miles down the river; the Danish settlement, about eight miles day on the banks of Salmon River; St. Basil's Numery, up stream about eleven miles, and other places of interest reached by good roads, through wild mountain scenery. For information as to facilities for fishing, gunning, etc., other than that now afforded, I would advise your readers to address F. W. Brown, Esq., the Collector of Customs at Grand Falls, who will, I doubt not, be happy to answer any enquiries.

I loope that my suggestions may prove the means of bringing many of my fellow sportsmen this next sum mer mot these "fresh fields and pastures new."

FISH AND GAME AT FORT CUSTER.

ORT CUSTER, Montana, is situated on the northern point of the Big Horn Plateau, near the confluence of the Big and Little Big Horn Rivers. On the west and north is the valley of the Big Horn; on the east the Little Big Horn valley, and on the south and southeast the plateau gradually rises until it culminates in the range known as the Big Horn Mountains.

These two rivers contain several varieties of fish, among which may be named pike, cat, sturgeon and buffalo, but no trout, the nearest trouting being about thirty-five miles distant.

Cañon Creek—so called because its bed is so much depressed from the level of the surrounding country—is claimed by local sportsmen to be the best trout stream in the vicinity. One party informed me that the trout they caught in this stream averaged three pounds each. On account of the depth and steepness of the walls of the cañons in which the stream has its bed, it is very difficult of access, the walls being about thirteen hundred feet in height and almost perpendicular, and the points at which the descent can be made are few. The stream is about fifty yards in width, although, gazing from the level, it appears to be about one yard. The fishing grounds are almost directly south of here.

About twenty-five miles beyond Cañon Creek we reach Pryor's Creek, and the point at which it leaves the Eig Horn Mountain. This stream is also of good repute as a trout stream. Cañon Creek is a tributary of the Big Horn River, and Pryor's of the Yellowstone. Leaving Custer on the Rock Creek and Fort Custer stage road, in a southeasterly direction, we find several more good camping grounds for the exercise of our skill as trouters. Grass Lodge Creek, a tributary of the Little Big Horn, is about thirty-five miles distant, the latter stream also containing trout ten or twelve miles further up. Tongue River and tributaries, at a distance of about a hundred miles from its mouth—it is a tributary of the Yellowstone—also shelters the much sought-for mountain trout.

The two first-mentioned streams are not accessible by caught in this stream averaged three pounds each. On

Trout.

The two first-mentioned streams are not accessible by any regular mode of travel, and a person visiting them would be compelled to camp out, although this would be an additional pleasure to a person who had been cooped.

any regular mode of travel, and a person visiting them would be compelled to camp out, although this would be an additional pleasure to a person who had been coped up by four walls for any great length of time. But the other streams are of easy access, being all on or near the route of the Rock Creek and Fort Custer Stage Line, and accommodations can be secured at almost any of the points named. At a distance of about seventeen miles from Custer, on the same road, is the scene of Custer's last charge, another point of interest to the tourist. I anderstand that there is a movement under way to erect a monument on the battle-leid to the memory of the fallen general.

Game of all description is very plentiful, but is fast being reduced. Bear, black, cinnamon and silver tip, the latter being called grizzly by some, are to be found in the Big Horn Mountains, at a distance of thirty-five or forty miles. There were about twenty-five killed by hunters from the post last fall. Buffalo may generally be found after a few hours 'ride, unless driven awy by the Indians who continually hunt them. Els are to be found in the foot hills of the Big Horn Range, also white and black-tailed deer. One herd of elk, in the vicinity of Cañon Creek, was variously estimated to contain from one to two and one-half thousand. One hunter, alone, killed sighty-three in eight days. Antelope are encountered by a two or three hours' ride. One herd of them, numbering three or four hundred, had the temerity to enter the garrison, but remained a short time, although they continued in the vicinity for several days. Jack rabbits and cotton-tails run around loose almost everywhere.

Blue mountain, pinnated and pintail grouse, sage

they continued in the Vicinity for several days. Jack rabbits and cotton-tails run around loose almost everywhere.

Blue mountain, pinnated and pintail grouse, sage chicken, curlew, and upland plover, are plentiful in the timber on the banks of either of our rivers. Mallard, grayhead, redhead, canvas-back, black and gray, or pinwinged ducks, widgeon, blue and green-winged and pinwinged teal, and butter-ball, are to be obtained in the marshes of the Big or Little Big Horn Rivers, or any of the streams in the vicinity.

During the spring and summer, Fort Custer is easily reached. From Bismarck, D. T., boats run continually, during the navigable season, as far as Fort Keogh and Terry's Landing, the former 140, and the latter point 35 miles distant. During high water, a boat occasionally succeeds in ascending the Big Horn as far as this place; but that occurs but once or twice in a year. From Fort Keogh and the Landing we have a daily coach. The Onion Pacific Railway will probably be completed to Fort Keogh by next fall.

From Rock Creek, Wyoming, on the Union Pacific Railway, there is also a line of daily stages, which cross a number of the trout streams mentioned above.

Fort Custer, Montana, 1879.

O, S, POAGE4

HINTS FOR ADIRONDACK VISITORS.

THE plan I would suggest has already been tried by several I know, and is well liked by them, and will, I think, in time be followed by the majority of sportsmen. It is, in the first place, to procure a tent and full camping outfit; such as a sheet-iron stove, tin folding baker, and all articles required for cooking, and the table, made out of tin or sheet-iron, and all toilet articles required, also a cot or lounge, to sleep on. Be particular to have all things made so as to get them into as compact form as rossible.

that empingement; such me a sheet-investore, in deather backer, and all articles required for examing and the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the protein of the control of the c form as possible.

Coarse clothing for camping out is the best, and the

weeks' board one season will buy a good camping outfit that will last for years, when well taken care of. Some of the guides can furnish a considerable portion of the articles required for camping when wanted. Den Smith has nearly all, which he will turnish for a small party. The sheet iron stove can be dispensed with very well during the warm weather, but will be needed to warm the tent after the night get frosty. It will be handy at any time to fry meat or tish on, and for slapjacks, but is unhandy to transport. unhandy to transport.

unhangy to transport.

Those who come to stop here for one or two weeks will find the plan 1 suggest much cheaper than to go to the hotels, where they will have to be litted out in the same way and go to some locality at a distance from the most of them to find good hunting or fishing. Those who only come for a few days will do well enough by going to one of the hotels. There are some whose charges are reasonable; of course they cannot board as cheap as the hotels in the towns and villages. Their run of custom only lasts a small portion of the year, and it costs them considerable to get their provisions in from the railroads or towns. But some charge too much, and the proprietors of them have become independent in a few years' time. Those in the north-west-portion of the Adirondacks have always been very reasonable in their charges heretofore.

ADRION ONDACK. who come to stop here for one or two weeks will

scales have already fallen from my eyes. I can already

scales have already fallen from my eyes. I can arready see men as trees walking.

I was certainly, however, not favorably impressed with the first appearance of New York, as I gazed upon it from the deck of the good ship City of Brussels. But then our voyage had been a stormy one, and the day was rainy, with a cold east wind blowing. Owing to the sad death of our poor friend Tileston, there was no one to meet us. We did not even hear of the event until we landed in the dock; then, indeed, our spirits sank below zero.

landed in the dock; then, indeed, our spirits sank below zero.

It struck me that the custom-house officers could not have done their duty in a more obliging or gentlemanly fashion; at the same time, I consider the restrictions against landing dogs in this country are calculated to do a deal more harm than good.

Landing in any part of England, you have only to hand your luggage to a porter, and whistle for a hanson. Here you might whistle the whites of your eyes out for any such useful conveyance, and all in vain. An obligablioned two pair lumbering carriage, however, undertook for a trifte of \$4 to convey myself and friend to the Sturtevant House. The fare in England would have been one shilling (25 cents). The mud on the streets, it struck ne, was very deep and very dark, and the streets themselves most vilely paved. No doubt matters will be mended in this respect some day. I cannot forget that this Hereulean republic is only in its infancy; but I rode in an onmibus from the ferry to Barnum's show, at Brooklyn, and I sharif soon forget the jothing; verily, the road that leads to my father's peat moss is better far than this.

Ere I reached my hotel the sun shone forth, avenues

the road that leads to my father's peat moss is better farthan this.

Ere I reached my hotel the sun shone forth, avenues and squares began to appear and New York rose degrees in my estimation; and it struck me we have nothing in England to compare in beauty with the streets of this city. I do not forget palutial Prince's street, of Edhabrigh, nor the mardle walls of Union street, Aberdeen, 'They each have their beauties; but the houses lack the stry grace of these. They are not bedraped with beautiful creopers, and the sidewalks are not shaded with drooping trees. As to the squares, I never saw anything like them in the old country. Tall houses, grim and gaunt, frown over our London squares; trees and shrubs there are in abundance, and even grass and flowers, but there are in abundance, and even grass and flowers, but there is no freshness nor beauty about them. You may pity, but you cannot admire them; besides, Boomed they ever so lovely, they are not free, for they are hemmed round by fron railings, with inhospitable gates, the keys of which are kept by the surrounding inhabitants, and no one darce enter save slutterning unuse-unads, bubies and lap dogs. But how different are your New York squares; how free and open, how green the grass, and sweet and healthful the breezes that blow through them. Why, it is quite a treat to come here with a book and while away al say hour. Yes, the square is an American institution; and the nurse-maid is another. Yonder one comes, wheeling along in front of her one of the airiest of airy perambulators, and what a lovely child it contains, lounging at length with the grace of a youthful duches, not cramped up as we cramp our children in a British barrow. I don't know which to admire the most, the maid or the child; the little white 'mutch' on the alter's head is quite new to no now, and intensely interesting. Tshould like to kiss that taby.

After riding for a week in the street cars, and on the elevated railway, I do not miss the English hansoms a bit. The tramway (street ca Ere I reached my hotel the sun shone forth, avenues

strikes me that the elevated railway doesn't improve mappearance of the streets, nor should I like to dwell in the houses adjoining. The feeling of privacy cannot be great in their rooms.

While traveling in the streets, badly paved though they be, I seldom see a dead or fullen horse. In London you can count them by the dozen. My way is never stepped by that truly English institution, a block. In London, when going to catch a train, you generally allow y carself twenty minutes to spare. You enter your hanson, and off you fly, from Fleet street to Paddington, for instance. But woe is me; even should you emerge quickly and safely, without collision or other mishap from the Strand, if the in the afternoon ten to one you find yourself either in Oxford or Regent street hopelessly, helplessly blocked in the middle of a perfect ocean of calos, carls and carriages, and there you may stay chating and fuming till all chance of catching your fast train is gone for that day. Your dinner will be spoiled, and your wife is sure to think that the flying butchman has come to grief, and at every knock that comes to the door she will imagine that your miserable remains have just been brought home in a carpet bag. I have not seen a single crossing sweeper. They don't sweep the crossings here, or no-hody crosses, and nobody walks, so it seems to me, and thus the side paths in the upper city are seldom overcrowden. How different it is at home!

By the way, another British institution which I miss is the rough; down town he may be, but here I do not see the man, And I miss, too, the working mechanic, or does he leave his tools and grime in the workshop, and wear his Sanday clothes on his week-day back, I have much to learn yet. However, I am coming on, I know mow hat "a boss shine for five cents" is, I know, too, the value of certain coins—a cent, a greenback, a dollar and dime, but the five cent bit is a duffer, and don't ring, and the greenback is greesy, and smalls like a Hottentor. Gottoo Stables, M.D., R.N.

Two Snipe at One Shot—Norwich, N.Y., April 30th.—On the aftermoon of the 27th of this month I was out after snipe; a friend of mine was with me who had hunted them but little. Three birds rose, two of them flying quite close together. He killed both with one barrel. I never saw this done before. Have never heard of it being done except in the West, where at times they are very plenty. We got ten birds, seven by myself and three by my friend. We had a little spaniel, quite wild; had we had a stanch cointer I think our bag would have been larger,

ARGYLE VERSUS AUDURON.

ARGYLE VERSUS AUDUBON.

THE Duke of Argyle in Frazer's Magazine gives his "First Impressions of the New World,"—and very pleasant reading they are, particularly the concluding chapter, which treats of American ornithology, which we learn is the favorite study of the writer. A charning passage is the description of his tirst and only sight of a humning bird. How an ornithologist could pass months in the forests and fields of Canada and the States and seconly a single specimen, it is difficult to understand, unless the Duke, as we suspect, is a short-sighted man.

Like most other Britons, however, he sees what he clime to see. So, as in a few weeks sport in the Canadian woods, he noet with few song-birds, he is confirmed in his previous opinion that the feathered songsters of America are inferior to those of Europe. The only song-bird he appears to have met with was the migratory thrush (robin), and "near Niagara one very broken and interrupted song of fine tone"—perhaps the bob-o-link. He never heard such vocalists as the brown thrush, hermit-thrush, song-sparrow, grosbeak, or oriole; and of course in Canada or New York he never heard the "wood notes wild" of the mocking-bird. So the Duke can hardly be called a competent witness. His Grace seems to have arrived at equally hasty conclusions, when he generalizes about the strange absence of fish-eating birds on American waters, asserting that the belted kingdisher is from the Delaware to Hudson's Bay the one solitary species specially adapted to the capture of fish. He might, on the Restigouche, have seen the mergansers, the grebes, the divers and the loon—all fish-eaters. In New York waters the herons and the bitterns also, and overywhere the osprey. Indeed, he mentions the loon and osprey as birds which he met with. All these on fresh water can be seen in any north-ern widerness, while on the sea coast the species of fish-eating birds which he met with.

eating birds which this observer failed to observe may be counted by scores.

Where the Duke did observe he is unfortunate in his conclusions. He thinks himself qualified to criticise Wilson and Audubon, as well as Dr. Franklin, as to their accounts of the predatory habits of the white-headed eggle, and proceeds to vindicate the character of the Bird

Wilson and Audubon, as well as Dr. Franklin, as to their necounts of the predatory labits of the white-headed eagle, and proceeds to vindicate the character of the Bird of Freedom by relating an incident of the capture of a salmon on the Restigouche by the eagle. If it was really the eagle that he saw perform the feat, and not the esprey, all observers by lake or river in America would tell him that it was an exceptional case. It might easily happen that a spectator unused to the sight of these birds might, at the distance of a thousand yards, even with the aid of a glass, mistake one species for the other. If if not, we must believe that the cagle in Canada, like the Indian there, has been reclaimed by the influences of royalty and British institutions from his original savage and predatory habits, and turned to industrious pursuits. On the east coast of Florida the eagle and the osprey are so abundant that we have seen more of each species in one day there than in the Northern and Western States, or in Canada, in a season. Christopher North, in a charming paper on the Ornithology of Scotland, published in Blackwood's Magazine, remarked that it would be an absurd thing to see half a dozen eagles together. This absurdity may be seen any day almost on the Halifax River, in Florida—and doubled at that—and all engaged in pursuing and robbing the fish-hawks. The accounts of the matter by Wilson and Audubon may be verified at any time. We have never seen an eagle eapture a fish for herself, though we have seen her pick up a dead cat-fish which was floating on the water. We have seen the osprey cutch a fish which an eagle obliged him to drop. The eagle caught it before it reached the water, and was bearing it away, when a second eagle at facked eagle No. 1, and robbed her. Old fishermen on this coasts asy that the eagle, as far as they know, never takes fish for herself, but lives entirely by robbery, usually of the osprey; but sometimes she will rob liven of their fish, when exposed on the shore, always selecting th

AN INVITATION TO "PEREGRINE,"-Our friend, H. H.

AN INVITATION TO "PERGRINE."—Our friend, H. H. F., thus pleasantly writes to "Pergrine," saying:—If "Peregrine," who chatted so overlastingly in your last issue about owls, "or any other man," will call at the Treasury Department of the N. Y. L. E. and W. R. R. Co., he will find the finest specimen of the American horned owl in this city—"Le Grand Due." in person. Also, a pair of New Jersey "Bob Whites," that the subscriber has never seen the equal of in size, plunage and nose—the perfect work of John Akhurst, Brooklyn. Also it very fine painting, by A. Rockwell, Buffalo, of a string of speckled trout he caught in 1859, in the south inlet of Raquette Lake. The writer mentions those possessions because their daily sight has done his eyes a heap of good, and he would like to share his enjoyment with "Peregrine" and others.

New York, April 11th.

A Per Seytirrel.—Hapt's Corners, N. Y.—One year ago I caught a squirrel, and in a few days I discovered four young ones in the nest. Within a week or thereabouts two got smothered in the nest, but the other two grew finely, and when thirty-five days old their eyes opened, and they grow nicely. Strange to say, I could not find anyone able to tell how old a squirrel must be ere he could see. I accustomed them to be handled almost every day, and would take one at a time some three or four rods front the house, and the little ones would run to me as fast as their legs would permit. Dick, when about three months old, was caught and killed by a cat, while out of his cage, playing on the ground. Dilly is yet living, and has been allowed liberty to go out each day, and has never been known to leave the place, only as far as the road, until Wednesday last, when she disappeared, and was gone until this morning, when she was seen by a neighbor coming home from toward the woods, some eighty rods or more distant. I took her to her cage, and she is now safe and well,

L. E. W,

Parastres in a Duck's Flesh.—Lowville, N. Y., March 29th.—Etitor Forest and Stream:—I read with much interest the letters of "Mic-Mac" and Dr. Hagen, giving an account of the parasites found in wild ducks' flesh. I met with a similar instance during a trip to the Adirondacks a few years ago. My companion and myself in our light boat were exploring the unfrequented waters of a cluster of ponds, so remote in the deep wilderness that not even Verplanck Colvin himself has ever visited them. I was silently paddling the boat through the narrow channel between the ponds, when just as we came into the second one, a large black or dusky duck fluttered along the surface of the water alead of the boat. My companion quickly raising his rifle, fired, and put a ball through its neck. Picking it up, we thought we would vary our venison diet with stewed duck. On returning to camp I though that skinning it would be the quickest method of preparing it. When I did I found the breast completely filled with parasites of about the size of grains of wheat, or resembling in size and appearance ants' eggs. Seeing this, we concluded that, after all, venison was better than duck, and did not change our mind that season.

SWALLOWS AND BED-BUGS.—Recently, while looking over some notes made in Fayette County, Iowa, during 1876, I came across some interesting items in regard to the barn-swallow (*Hirmato horrcortin*).
I was told that the swallows had been driven away in

I was told that the swallows had been criven away in the early part of the season by a pair of purple martins (Proge purpling), which refused to let them build. About the middle of June, however, the swallows re-turned, and, unmolested by the martins, plastered be-tween fifty and sixty of their mud nests under the eaves of the large. of the barn.

of the barn.
July 4th I secured several specimens, together with the eggs. The bixts were, of course, in wretched plumage. They were, however, remarkably clean and free from parasites. Some days later, bed-bugs (Citien lectumarius) were found on all the swallows taken; and the insides of the nests, and sides of barn down to the ground, literally

the nests, and sides of barn down to the ground, literally swarmed with these animals.

I was told that the bugs never appear until the young birds are hatched. The bugs are found in the basswood trees of that locality, and I have often seen them in new boards. In fact, it is next to impossible to keep a newly built house free from the pests.

The question is, do the swallows get the bugs from the basswoods; and, if so, low does it happen that they are seen only after the young birds are hatched?

I can answer this only by supposing that the swallows repair to woods for insects to feed their young, and that while there they become infested with the parasite. I do not believe the bed-bugs are used by the swallows for

I have never found any explanation of this curious freak, if it can be so called, either in books, or from naturalists with whom I have talked.

Dr. Packard, in his "Guide to the Study of Insects,"

Dr. Packard, in his "Guide to the Study of Insects," speaks of a letter from a gentleman, in which he states "that he found a nest of swallows on a court-house in Iowa swarming with bed-bugs."

The bugs seem by appearance, color, bite and odor, to be identical with C. hetrilarius.

Dr. Packard speaks of a variety in Europe, C. hirundinus, which lives on swallows; but does not mention any variety peculiar to our birds.

Boston, Mass., April 18th.

Struce Parthidoes.—The following appears in a recent issue of the Glens Falls (N. Y.) Republican:—
"'Did you ever kill a black partridge?' inquired a gentleman whose post-office address is Indian Lake. We plead guilty to having killed a few black squirrels, crows, and similar insects; but had never nurdered, or seen, or even heard of a black partridge. 'They exist, nevertheless,' said he; 'but in only one section of the woods that I know of, While hunting in the Moose River country, last fall, I shot two, and young Durant bagged a whole covey. They are a royal bird, black and glossy as a raven, with strips of bright crimson feathers over each eye, and a narrow strip of pure white down the breast. Their size is that of a common partridge, and they are less wild. I have heard of them in the Moose River country for the past half a dozen years.' Can the Forest and Stream, or any other sporting authority, give us information concerning these chony-colored strangers?' Oh, give us a hard one! They were spruce grouso (Can-

Oh, give us a hard one! They were spruce grouse (Canace canadensis).

ace canadensis).

WHEN DO BEARS HAVE YOUNG?—Bethel, Marine, April 5th.—I notice in Forkers and Stream, of 4th March last, an account of a bear killed the 18th January, and that the cubs were found in the den, three of them with eyes closed, and very young. I account for this as a premature birth by certainly two months, or nearly that. The old bear being disturbed left the den, but not until she had cast her cubs. I have never heard an instance yet, where a bear was taken from the den, dead or alive, without first casting her cubs. The natural time for cubbing is the month of March, in this State. The time may differ in different latitudes. I have killed seventy-three black bears, Ursus americanus, under varied circumstances, and at all times of the year. A young Homo, at seven months, is likely to live, if tenderly cared for, and why not young Ursus? Find a bear's den in any month of the winter containing a she bear with cub, and you cannot take her from the den quick enough, but that she will have her young ones in the den. After cubbing naturally in her den, she will not go so far away from the den moment she leaves them, for whatever reason, they will set up such a squalling as to make the woods ring, J. G. Ricu.

Do Gray Sourrells Lay up a Winter Store of Food? Fairland, Ind.—April 15th.—John Burroughs, in his "Notes of a Walker".—Sertimer's Monthly for February—seems to convey, incidentally, the idea that our common gray squirrel lays up a store of nuts for winter use. Is he correct in this or not? I know Mr. Burroughs to be a careful observer, and I have always found his contributions to Sertimer's, when treating on subjects in natural history which have come under my observation, to be romarka-

bly accurate, but is it true that the gray squirrel lays up a store of nuts for winter use, or does he trust to chance and his usual strewdness in robbing the ground-squirrel or chipnunk for his food? The writer has always been led to believe the latter true, and years ago, when a boy, wandering in among the maple "sugar camps" on the banks of the beautiful Ohio river in Southern Indiana, he thought be had solved the question by cutting down tho old stubs and trees that were known to be the winter den of a pair of gray squirrels, in none of which did he ever find so much as a single mut that was edible, although an abundance of shells and other refuse. SHARPEYES.

We have always supposed that the gray squirrels laid up some provision for the winter. Perhaps some of our readers can give us some facts bearing on this question.

TAYTHERMY WITHOUT A TEACHER - Under this title Mr. Walter P. Manton has given us an interesting and practical little book of forty pages, which we can recommend to beginners. It is a cheap, and, we think, reliable handbook, treating of the preservation of birds, mammals, fishes and insects. This little volume does not aim to take the place of the larger and more expensive works in this line, but is intended for the beginner in taxidermyit is intended as a primer, rather than a reader. Boside the chapters on taxidermy, is one devoted to hunting and hygiene. On the whole, the work is one which we can recommend with satisfaction.

GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory of In sending reports for the forest and stream directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County: Means of access; Hotel and other accommodations; Came and its Season; Fish and its Season; Boats, Guides, etc.: Name of person to address.

FANCY FLY-RODS vs. WHITTLED POLES .- Some one has been writing from the Adirondacks to one of the New York dailies, and manages, in the course of his communication, to say some very sensible things about the superiority of the fish caught and eaten there, over the mushy specimens sometimes palmed off on city purchasers. We have a faint suspicion that the article was written in the wilds of that self-same daily's editorial rooms, and one thing inducing this belief is the following bit of wisdom about fly-rods :-

The claborate jointed rods which the city sportsmen bring into the wilderness with them had better be left at home. As a rule rods of a nucli better quality can be procured here for about one-half of the money. The guides themselves use a tamarack pole, which may be cut almost anywhere, and some very skillful one-and of the money. The gainest demaner's used a families pole, which may be cut almost anywhere, and some very skillful fly-casting is done with these home-made rods. They have one strong point in their flavor, and that Js, when broken in manteur hands, It does not require \$25 to replace them. But while the funey rods may profitably be forgotten, a well-stocked fly book and good assortment of lines should always be brought into the woods by the visiting fisherman. Aditrondack trout are able-hodied and delightfully gamy, and they will snap weak lines without a twinge of conscience. One came very near snapping a line that was not weak a few days sgo. It was held by Harry Thompson, the backwood guide, who once read Sophnetes in the shade of Oxford University. He saved both line and lish. The latter, a glorious speckled trout, weighed six pounds and two ounces. I have not been so lucky as that myself, but I took a string of four heauties last week, weighing in the aggregate seven pounds—took them at the price for which they were offered—five cents a pound.

Of course he did, and we'll wager the finest "fancy" rod in our outfit that he never took trout with anything else than this silver or shinplaster bait.

An Acknowledgment.—Bridgeport, Conn., April 27th.
—I inclose copy of an acknowledgment received yester-day from a friend to whom I sent a few tront. I think it worthy of your notice—do you?

Your gift—these beauties of the stream—

Are the ideal of my dream: When as the gentle spring days come, And by dark Fate I'm kept at home, I picture all the angler feels, As mountain brook its darlings yields, In weight and markings, tint and size They please my fancy, charm my eyes But how shall the delighted tongue, Tell how their savors to it clung— Refined, exatting, delicate, Sense-thrilling, luscious, exquisite Sense-thrilling, its course exquisite, As, brown and fragmant from the pan, They vivified the inner man? Dear friend, sweet thanks! you send me more Than if you gave a golden store. The fields, the skies, the woods, the streams, The hopes of youth and childhood's dreams Are in the gift—here, too, I find Your heart, large, loyal, true and kind.

ADIRONDACKS.—Moira, near the Adirondacks, May 1st. ADMIOSDACKS.—Moira, near the Adirondacks, May 1st.—The ice is out of the lakes and ponds in this portion of the Adirondacks, and trout fishing has commenced. A man living near Branch Pond brought a fine lot down to Malone the first part of the week, that he caught in that pond. Thirty of them weighed something over twenty hounds. Branch Pond is only six or seven miles south of Malone. Several fine lots have also been caught in the brooks about here during the past two weeks. The prospect for deer the coming season was never better for many years, and I have not known the partridges or ruffed grouse to be so numerous in the spring for a long
Adrion Ondack,

CONNECTION LAKES .- We have an extended sketch from the writer of the following notes, which we will shortly publish :-

shortly publish:—
A party of three from Boston were the first visitors—getting two deer and plenty of fish. My friend and self-followed; next a Syractuse, N. Y., party (Rev. Dr. Beard, Col. Chase and Mr. Bacon), stopping but a few days after them, Prof. A. W. Wheeler, of New Haven, and lastly, a party of four from Bridgeport, Conn., all well armed, which fact may account for the scarcity of game for the next few weeks.

for the next few weeks.

I floated with Norton twice only, shooting a buck the first night, and the last a moose (a two-year-old), which I left with Uncle Tom, and have since heard that it was

Helt with Office for, and pave since heart that I we he last fresh meat seen in camp during the season. Prof. Wheeler wrote me that he floated East Inlet wice for moose, and did not hear a sound, and goes on to say, "The fact seems to be that all moosedom has heard of your exploit, and the wise moose have held a council, and decided to emigrate, for the time being, to

unnolested feeding grounds."

I had the advantage of being the first one to try the new "ground," the aid of a full moon, and otherwise perfect night, and the luck of making a dead shot almost by guess.

nester intends to improve upon his camp this season,

Guester intends to improve upon his camp this season, and to get a man and wife to look after the cuisine, and to devote his time to guiding.

Second Lake is a charming spot, and is still fresh (First Lake is worn out). Deer are not as plenty as about some of the back ponds in the Adirondacks; but there is usually no trouble in supplying the wants of the camp. The fishing is not as good as in other lakes—the trout average smaller. It is a poor place for a person to go thinking to find use for a large amount of ammunition; but, to any one interested in natural history, and satisfied with a reasonable amount of sporting, the beaver works and cariboo bogs will well repay a visit.

F. S. P.

ISLAND CAMP.—Island Camp is situated on an island in Pike Lake, Wis, a few miles from Ashland, and is the private property of a party of St. Louis sportsmen. The quarters consist of a fine center building, in rustic style, with a kitchen detatched. The island itself is about two acres in extent; the take surrounding is full of bass and pike, and the streams and creeks near by, around in trout. Deer are abundant in the adjacent of bas

PREPARING FOR THE BLACK BASS CAMPAIGN - IVIIIIs TERPAINS FOR THE BLACK DASS CARPAION.— WILLS, Teams, April 23th.—Last year, or the year before, some excellent articles came out in the FOREST AND STREAM in the interest of the black bass, but it seems of late that this famous fish is losing ground in the columns of the this famous fish is losing ground in the columns of the paper. That will not begin to do. This old soldier must have his pension, nor should his fame and record die in oblivion. I never road with more interest anything than those lively essays upon the habits, characteristics and methods of capturing this wary fish. We, of the South, know nothing of the trout proper, but we have the black bass in all our waters, and, although we regard him par excellence the king of his tribe, yet we look upon him as the most cunning, arbitrary, tantalizing and uncompromising inp that swims; and if any angler, between Maine and Mexico, can write out a campaign programme that will meet all the indications or requirements when one goes lishing for black bass, and that will bring luck to one's string, I, and the rest of us, will go out to him that will meet all the indications or requirements when one goes ishing for black bass, and that will bring luck to onc's string, I, and the rest of us, will go out to him with our souls and regard him not only as a public benefactor, but a "mutual friend" to the whole body of hass fishermen. I only want suggestions how to get my hands on some four to six-pounders that have been standing off about two feet, and likeking their chops at the bait on my hook for the last five years, and no argument that I can frame will move them one inch closer. I never used nor saw a fly used for bass. That kind of science has not been cast upon our waters yet. I shall try it on soon. I have a good outfit, now; my boats are all newly painted; I have rigged my rods (red poles) with seventy-live feet of best oil-braided silk-line, click red (never saw a red before). I got Orvis to make me a fly, a "green and gold," I then took that as a pattern, and read in Hallock's "Gazetter" about colors, etc.; then got a lot of feathers from cranes, ibises, storks, herons, chickencocks, peacocks, wood-ducks, mallard, parrots and the like, and I have made some of the prettiest flies and bobs on earth. To get my hand in practice with this red, I got a little nigger to take hold of the line and run, and, as he runs, I pull and manipulate; and when he has run off enough line to look well, I tell him to stop—the has alway stops on his own account, at intervals—and when he hes run off enough line to look well, I tell him to stop—the has fliving his production. I have he casting and skittering, I knew that before. And now coating, and may becoming expert. As to casting and skittering, I knew that before. And now finished. I do this daily, and an becoming speet. As to casting and shiftering, I knew that before. And now with this "equipment," if I don't fool these old chaps next week, during the last quarier of the present moon then "the books are wrong." C. L. J. C. L. J.

TROLLING FOR SALMON TROUT.

AVING often heard of the glorious sport to be had trolling TAYING often heard of the glorious sport to be had trolling for sulmon trout during the summer months on take Superior, four of us, after mature consideration, concluded that we would find out for ourselves how much there was in the wonderful stories. The parity consisted of James Melban, Fred Jones, George Hait and the writer. October 1st, 1879, the day on which we had decided to try our fortune, turned out dark and storny, the wind biowing haif a gale from the northeast, but nothing daunted by the hecienement of the weather, we put our tent and traps about of the boat which we had been crushing with for the summer (for want of a botter), which is of a build monopolized by the fishermen of these northern takes. They are elincherhult, about25th. kecl., filt, beam, sharp stern and schooner-figged, without a deck, but very staunch and seaworthy. We got under weight about II o'clock A.M., the wind, as I said before, blowing half a gale from the northeast, cut before we had run five mines of the twenty-live we had to sail, it livel, and a terrific thunder-live we had to sail, it livel, and a terrific thunderof the twenty-live we had to sail, if in led, and a terrific thunder storm, for which Thunder Bry, sike Superior, is noted, came on, and there we hay rocking about without wind enough to keep our sails full, and the rain coming down in bucketsful. After about

two hours' drenching, the wind shifted to the northwest and we got along better, the weather still remaining a little moist; howver, by four o'clock we were in Jarvis Bay, and after considera ble trouble in getting our boat over the bar, were safely moored ble trouble in getting our boat over the bar, were safely moored to the banks of the Jarvis Rilver, a small river about sixty feet wide at the entrance. An hour was spent in getting our traps ashore and pitching our bell-tent to protect them, and while Jones and Mac were cutting wood for a lire, George and the writer concluded to try and get a fish for supper. After rowing for hall a mile in the skill which we had towed down, we reached the fishing ground. There, much to the writer's surprise, he immediately had a bite. It would take an abler pen than mine to portray the intense excitement of a tyro landing his first fixeen-pounder of this supplies, theorem, within fixeen musted early each of the surprise of the supplies the ways within fixeen musted early each of the supplies the ways within fixeen musted early each of the supplies the ways within fixeen musted early each of the supplies the ways within fixeen musted early each of the supplies the ways within fixeen musted early each of the supplies the ways within fixeen musted early each of the supplies the ways within fixeen must each of the supplies t ounder of this species; however, within fifteen minutes darkness promote to this species, nowever, within integer immutes drawing to compelled us to desist, and we rowed for the camp with the halling distance, we joyfully should our success to Jones and Mac, who were the strongest skepties on the subject. This was, of course, received with derisive and scornful should and laughter, which received while derisave and scorning isolates and alugner, whole was not exactly turned to weoping on our landing; but they were almost wild with excitement, and wanted to go trolling then and there, although it was by this time durk, so the reader may imagine their mental condition. George now turned cook, and is nevery short time we were enting a meal coasisting of boiled trout. and potatoes stewed with pork gravy, the orthogox dish on these and potatoes stewed with pork grayy, the orthodox and in these expeditions, and I might here add that the fish that are caught while trolling, and caten fresh from the water, have a flavor equal to the finest brook trout, which no one who has ever each one in that way will dispute.

After supper, and waile enjoying our pipes, the whole subject After support and white chopying our pipes, the whole sinject of course, was fish, and how many over were going to get on the morrow. In order to be early at the scene of action, i. was unanabully resolved to follow the instructions of the old proverb 'carly to bed," which we did with a good fire blazing it from of the tent. Now all was quietness excepting the cracling made by the fire, and each supposed the others in the land of nod, with dreams of gigantic fish to be caught on the morrow floating through their bardins. After two hours of this, an impatient exclamation was heard from one of the party that the heat was unbearable, although memory says that the remark was not was untogramous minough memory says one the remark was introduced in as mild a form as I have written, when we all sat up and found that the same sentiments imbred the minds of the quartette. Bo the conclusion now come to was, that it would require some of Bass' bilter beer to counteract the effects of the heat, and that we would not go to bed at all, in order to be up early in the morning (excuse the bull). However, with smoking, and spinning yearns of former advenurces had with rod and gun, and many a midnight watch on deck, it was soon time for breasfast. At the first peep of dawn, we were all away to the ground where, after three hours' continued excitement, the skiff was was this: one rowed, two sat in the stern, each with a trolling line—one running from each side of the boat—and the fourtl man, next them, landed the fish and cleared the lines. In landing man, near ones, annear to assume centre in incs. In annual to less the list, one has to be very carful and keep them clera of the sides of the beat, otherwise there would not be a book left on the spoon every 'ine you land?' one. Mae, who took the first turn as landing, distinguished himself by the very scleatific manner in which he extracted the hooks (greenally the whole three hooks which he extracted the hooks (greenally the whole three hooks). on the spoon would be firmly imbedded in the upper jaw of the

on the spool would be firstly modeled in the upper law of the lish, and it required considerable labor to extract them). The panys of hunger, together with the necessity of discharg-ing our cargo, which had brought the boat nearly to her gun-waie, compelled us to land and enjoy another breakfast, of which where completion is to land and only another breakins, or where fish was still the invortice portion. After an hour sport in sailing part of the fish (we had no lose with us, and were afraid to risk keeping them all fresh), we started out for a new place on the other side of the bay, which we had not previously explored, where our former good lack followed us, and the result was wenty-three more

All through the day one of Lake Superior's densest fors had Antitrongia to my one of take Superiors ususes frogs had been abroad. Often we were unable to see one hundred yards ahead. Nothing disturbed the sullness of nature, excepting the noise made by ourselves, and the fog-whistle of a Royal Mail steamer some four miles out among the Islands, bound for Duluth, the zenith city of the unsaited seas. But now it lifted for a shore the zenith city of the unsafted seas. But now if litted for a short time, and a light breeze springing up, we concluded to start for a bank where we were auxious to arrive some time through the night. After meal No. 3—which of course was in the natural order of events—we started, but the few cats-paws we proviously had, died out as soon as we got under weigh, and George and Jones put off again in the skiff—this time on an exploratory tour, Jones put on again in the sain—this time on an exporatory tour, seeking whom; they might devour out of the fish lines. A few minutes—half an hour—brought them back for a gun to shoot two partridges which they had on a tree near the beach. I forgot to say previously that Jones and Mac, while exploring the river say previously that Johns and make, whose exploring the iter-before dinner, shot two of a covey of partridges which they had raised, and they thought with these two we would have a time support—this time tish varied with game. Months after, however, the joke came out: that what they had imagined to be partridges were two knois on a dead tree, which the fog had made loom up when they had gone with the gun. The wind freshened up to a still breeze, dead shead. After two or three stretches we found that it was likely to be a wild night, and considering discretion and a camp preferable to a stormy night in an open boat, we headed for the skiff, pushed her up, and put for a harbor, the wind headed for the sain, pushed are up, and put for a hardon, the which having increased to a gale, accompanied by a territic rain storm, both of which hasted all night. A mile's sailing brought us to an excellent harbor, but a very bad camping ground, the point on which we had to pitch our tent having been devastated by a bush fire, which had not only birnt the wood on It, but the moss and screase oven, leaving nothing but rocks and gravel to camp on There being no choice, we got everything under cover as quickly as possible, and started, to cook support hard work with the wet roots and telftwood, which was all the clay what Por supper we had some bouillon, a dish worthy of a Cordon bleu. It consisted of the two partridges, some bacon and potatoes, flour and tomathe two partriages, some parch and potatoes, not and controlled together; and, although to some of your readers such a mixture may seem unpalatable, it wants only to be extent to be appreciated. Sleeplessness did not pervade the camp this night, not with standing the bad camping ground and our clothes which were saturated-notwithstanding sundry waterproof coats —and almost before we had finished our after-dinner smoke Morpheus had us all for his loyal subjects. Mac here again par most before we had missed our after-unner smoke, is had us all for his loyal subjects. Mac bere again pardistinguished himself. In spite of our assertions that it therees to attempt building a fire, as it would not burn, to the contrary that would nave roasted an ox whole; and it burned till it hardly

Morning dawned bright and cheerful. For the first time since Morning dawned bright and cheerful for the urst time since leaving home we saw the sun. After, of course, a hearty breakfast we started again for home. As the breeze was very light, and after being an hour sailing one mile, Mae and George concluded they would go alwead in the skift, and try some unexplored ground for a last parting fish; and whether it was the improve-

left a cinder

ment or a better place, or both, that made the fish bite more readily, they succeeded in heating our best luck, and in eighteen uninutes landed sixteen fish. Those, with eight caught in the morning while breakfast was being pepaared, and one caught from the sailhoat, brought our numbers up to exactly seventy flye, which weighed from nine to twenty-four pounds each-Mac

live, which weighted from nine to twenty-four pounds each—Machaving the honor of catching and hading the twenty-four pounder, and he felt justly proud of his lines.

Satisfied that we could now earry off the palm for a successful trip, and a favorable breeze striking us, we hoisted all our rugs, and were soon booming merrily home, which we reached in good time, to greet those of our citizens who, like in most frontier towns crowd around each returning sportsman, and had come down expecting to chaft us on the ducking we must have had during all the storms, and, as they supposed as a natural consequence of the tim, no this, but their chaffing was timed into surprise when they trip, no fish; but their chaffing was turned into surprise when they saw our wonderful success, and fish stories became the popular excitement until the arrival of the next steamboat with the

i-weekly mail.
The following information may be of interest: Where we fished the shore is formed of perpendicular cliffs ranging from one to six hundred feet in height, and the beach is, in nost cases, formed of plees of rocks, which have been dropping from the sides since the days when Adam was a boy, making the beach run into the water at an angle of about forty-five degrees. Our ex-perience was to row exactly over the spot where you could see herefore was form waterly of the spot where you can also the bottom (about sixteen feet down—any divergence from this rule was sure to be attended with had luck), and the main speed of from one to two and one-half miles per hour. Although we continually had our lines out when sailing, we

only caught one fish-which was when crossing a point, and with

only cangat one issa-winca was when crossing a point, and what the Stora previously monitioned.

To a lover of the picturesque and grand, the route from here to James Ray would possess countiess charms—those stopendous piles, Thunder Cape (4,900 ft.) to the right, Mackay's Mountain (4,300 ft.) the left, and Fie Island (1,000 ft.) almost a head, form train to the left, and the issuin (thou follows), among the intuity noble sights, their perpendicular sides as changeful as a kaleidoscope, according to the different positions and lights thrown upon them; while further on, countless islands and head-lands meet the delighted gaze, which could be contemplated day after day without any cessation of interest, as no two spects are allike; ore time mirrored in a sea of glass, again the ungry tempest hashing their feet with spray, while spring, summer, autumn and winter each present such a contrast from the singular waters of the lake in summer, to the eternal ice and snow of an annost arctic winter, while the rarity of the atmosphere makes the a.nost arctic winter, while the rarrity of the atmosphere and landscape, twenty miles distant, seem nearer thanheim would in an ordinry climate; and, to a lover of nature, the trip amply repays the time spent, should one never cast a line or land a lish.

Prince Arthur's Landing.

BROOK TROUT IN PONDS.—Chrome Hill, Lisburn, Ire-M BROOK TROUT IN PONDS.—Chrome Hill, Lishurn, Ireland, April 16th.—Editor Forest and Stream:—Through the kindness of a friend, I enjoy the valuable privilege of perusing your interesting paper regularly; and many an hour of pleasant reading I have had, the only drawback being that so many miles of the "weary waste of waters" prevent me from enjoying in propria persone some of the many "pursuits of pleasure" offered by your splendid country. I notice in your issue of 25th March an article under "Fish Culture" by "A Practical Fish Culturist," in which he states that trout, as a general rule, will not thrive in ponds. I cannot agree with him; but, on the contrary, aver that trout will thrive better in ponds than in running water. In support of this statement, I the contrary, aver that trout will three better in points than in running water. In support of this statement, I will give two instances which have come under my inmediate notice. A few years ago a new reservoir or dank will give two instances which have come under my immediate notice. A few years ago a new reservoir or dan was constructed to supply my neighboring town with water. It gets its water by drains from the adjacent fields; none of these drains are three feet wide, and, except in floods, they don't contain as much water as would cover a pound trout. I placed some brook trout in this pond, and another gentlemen had a large lot put in, all small. It is now teeming with fish; and I know of them being caught up to nine pounds weight. Again, a friend of mine constructed a small dan, about one acro in extent, to supply his bleach green with pure water. It has no open inlet, except a run from a spring well a few yards from its bank. Well, three years ago I placed in this pond ifficen small trout caught in a mountain stream, none over four ounces weight. I heard nothing of them ihis pond fifteen small trout caught in a mointain stream, none over four ounces weight. I heard nothing of then till last autumn, when I determined to try if they were living or not. So, taking advantage of a fishy-looking evening, I sauntered down duly prepared, and choosing a dark-looking spot shaded by some villow bushes, I tried a cast with a "willow fly," and scarce had the feathery deception dropped on the surface of the slightly ruffled water, when a swish of the reel, and twenty yards of varished silk spinning out, warned me that I had a 'sockdollager' on. In five minutes I had a beauty on the sweat hat sevelet four and three-nuters nounds yards of varnished silk spinning out, warned me that I had a "ocaty on the sward that scaled four and three-quarters pounds. Another try, and a three-pounder joined his companion. These I killed. On the following evening I caught eight; one of them I should say seven pounds weight—but I returned all, as I did not wish to depopulate my preserve, as I do not believe they have bred, not having any running water. Now in the streams whence these trout originally come from, I never heard of trout being caught over two pounds weight, mostly all turning about four to the pound, and these brooks are incessantly fished. This proves, in my mind, that trout thrive, grow large and lusty in still waters. I think such an article as "Practical Fish Culturist" writes might deter many from forming a fish pond; hence, I think it right to give my experience in the matter, trusting you will pardon me for taking up so much of your valuable space.

RICHARD NIVEN.

CONNECTICUT SALMON.—The Hartford Times says: "We shall not, probably, get any Connecticut river salmon this year, as these fish are all caught at the mouth of the river and sent to the New York market—in violation of the law, too. On this account, we believe, the legislature refused an appropriation of \$2,500 to the fish commissioners in aid of the further propagation of the salmon,"

THE NEW YORK DOG SHOW,-It has been decided to hold the bench show at Madison Square Garden on the 11th, 12th and 13th, as previously announced. This decision was arrived at by the managers of the show on Saturday last, after a thorough examination of the building by several eminent architects. The widespread interest in the show is shown by the great number of letters and telegrams received daily from all parts of the country, many of them regarding additional entries, which, however, cannot be made. Mr. Lincoln informs us that "it is an astonishing fact that out of the large number of entries made, only one has been withdrawn since the accident occurred." In the meantime, the two English judges have been filling up their time by visiting the cities and kennels in the vicinity of New York. Mr. Hugh Dalziel, of the Live Stock Journal, has been with his friends in Boston; and Dr. Stables on Monday last paid Mr. Moore's kennels a visit at Philadelphia; he then went to Baltimore and Washington.

Champion Tarquin, Sir William Verner's bull terrier,

has been relieving his mind and occupying his spare moments by chewing up all of the canine persuasion that came within his reach. He met a tough customer, however, in his son the other evening, and he has been in a dreadful humor ever since.

Madison Square Garden.—Examination and inspection by the managers of the pench show and their archi

tion by the managers of the bench show and their architects:—
The Madison Square Garden, where the bench show will be held on the 11th, 12th and 13th inst., has been thoroughly inspected and examined by Mr. John B. Snook and Mr. Robert H. Robertson, these gentlemen having been employed by the managers of the show. Mr. Snook is the oldest and one of the best known practical architects in the city, and probably has had more thorough practical experience than any other man in the city, both as a builder and architect in all its brunches. Mr. Robertson is one of the most prominent of the younger architects. He is a member of the firm of Potter & Robertson the senior member of which was for some time the United States government supervising architect.

some time the United States government supervising architect.

Mr. Snook and Mr. Robertson spent Friday and Saturday afternoons in the Garder, making a most careful and thorough examination and inspection of the building, and report, "that in their opinion the building is amply safe and secure for the purposes to which the management have determined to dispense entirely with all that portion of the building fronting on Madison arenue; the entrance there will be entirely closed. The main building, where the show will be held, will thus be entirely separated from that portion of the structure where the accident occurred. The entrance will be on Fourth avenue, Twenty-sixth and Twenty-seventh streets.

Chas. Lincoln, Supt.

POINT JUDGING AT SHOWS.

THE complaint has been greek that, at the various bench shows, the dogs have not been judged by should be the rude; he us, therefore, see if there as so here any reason for this inconsistency.

Previous to 1378 the scale of points, as printed in the Funcior's Gazete, was the acknowledged authority, but with the advent of Stonetenge's last book, the kennel clubs adopted the scale of points there given. The rules for bence shows offered by the National American Kennel Club have the following:—

Rule 7.—Dogs to be judged by scale of points laid down in t third edition of Stone negges "Dogs of the British Islands."

Runa 7—Do is to be judged by scale of points aid down in the third exition of Stoucherge's "Dogs of the British Islands."

If the trouble be taken to notice the number and variety of terms used to designate the anatomical parts, or collection of parts, in the various breeds for which a value has been given one sufficient reason for not judging by points can be found.

The dog is not taken as an animal of a particular shape and form as is the horse or cov, and divided anatomically into different parts, for which a value is invariably given, the value only ranging with the breeds. For example: The Skye terrier has fifteen allowed for a perfect head, while for such an important part of his organization the Yorkshire is allowed nothing, the amount being distributed for excellence in other particulars. In this way there are fifty-four parts, or collections of parts, for which value is given in the sporting breeds, and sirty-four in the non-sporting, no one particular breed having more than sixteen.

On page 37 of his work, Stonehenge gives a plan for judging, based upon an anatomical division of the dog's body, but one obviously impossible to follow from the scales given throughout the book. Where the shows are for only one breed, the the bull-dog shows held in England, judging by points can easily be, and has been, accomplished; but in a show with ten to twenty-dive different breeds, to expect that any judge, however good hemay be, can remember without any aid to his mentory

complished; but in a show with ten to twenty-five different breeds, to expect that any judge, however good he may be, can remember without any aid to his memory the particular twelve or sixteen kinds of points out of the fity-four or sixty-four given, is simply absurd.

The rules under which the coming New York show will be held say that Stonehenge's points will be used when necessary—a provise which relieves the judges from using them unless they so desire.

The Secretary of the Massachusetts Konnel Club has prepared a table of points of all the sporting and non-sporting dogs, as given by Stonehenge, showing at a glance the value of each point in judging any particular breed. The table is printed on both sides of a stiff card, and with each is furnished a package of scoring cards, by which the work of judging by points is reduced to its

These cards will each give the score of ten minimum.

minimum. These cards will each give the score of ten dogs, and are very easy to understand and use. The different points on the table with their values are numbered from 1 to 118 inclusive. The first column of the scoring-card is for the numbers as given in the table of the points of the particular breed to be judged. The second column is for the maximum value of the points when perfect. This is filled in simply to aid the memory. The other columns are for the points given the dogs judged. By holding the table and score-card back to back in the left hand when judging and marking, ready reference can be had to the table for information as to the points to be considered in regard to the animal in the ring.

The tables and scoring-cards will be for sale for the rst time at the New York show.

CORWER,

ENGLISH FASHIONS IN DOG FLESH.

ASHION in dog flesh is a curious subject for contemplation, but it is nevertheless an interesting one, when the various breeds which have occupied the highest position in the estimation of the public come to be considered, the truth of the aphorism that "Every dog has his day" is forcibly brought before us. The rage to possess St. Bernards has somewhat cooled before the advance in later years of mastiffs, and the ownership of the former breed has lowed into the hands of a few but select former breed has lapsed into the hands of a few but select body of admirers. Irish wolf-bounds are practically ex-tinct, pace Mr. G. A. Graham, but German mastiffs seem taking root amongst us. Unfortunately for themselves, however, all the larger breeds require space and special care, which precludes their being kept in numbers in in-ternural kennels, and the affection of the public has per-force to be directed toward the lesser varieties of dog. Here, at the present time, the fox-terrier roign supreme. Presenting as this class of dog does such a diversity of type and coloring, it can hardly be a matter for astonish-ment that his friends are legion. A fox-terrier is usually a peaceably inclined and vivacious dog, and even if not pretty may have those pretty ways which endear him to a certain class, whose great ambition is the accusistion of former breed has lapsed into the hands of a few but select pretty may have those pretty ways which endear him to a certain class, whose great ambition is the acquisition of something with hair on it that will bark. To such, the excess of three or four pounds over the correct standard of heaviness, does not depreciate the value of their pets; and as there is always a variety of gaudily-marked dogs in the sale-list, a deficiency in symmetry can be compensated for by plenty of pretty spots. However, with all their present popularity, fox-terriers must look to their laurels, for Irish terriers are surely gaining ground. Patriotism, and love of what they call their "national dog," has caused our friends across the Channel to exert themselves to the utmost to push the frish terrier; and their efforts are now bearing fruit, and will bear more. themselves to the droots to push the firsh terrier; and their efforts are now bearing fruit, and will bear more. In toys, the lidle black and tan terrier has almost gone from sight, as ladies now prefer a more robust companion, and a colley is more often seen than the pigmy black and tan in the society of the gentler sex. Pugs have held their own, but Yorkshire terriers are but seldom met with beyond the limits of their native county. dom met with beyond the limits of their native county. Toy spaniels may be reckoned as looking up, but the attention which must be devoted to their tollets renders them, as it does Maltese and Yorkshires, a trouble to their owners which the latter are often glad to escape. Daschunde were at one time, and that not long ago, looked upon as the coming race of dog, but their reign was brief and inglorious.

upon as the coming race of dog, but their reign was bree and inglorious.

Having thus referred to dogs which are looked upon as pets, it may be well to turn for a moment to the various sorts of vermin dogs, which have been popular from time to time. Here there has been but little change, the dandies, Skyes and Scotch terriers of the North, and the buil and black and tan terriers of this country, and the Irish terriers having managed to retain their several supporters in the face of every opposition. This being so, it would be dangerous to prophesy ill luck for any of them; but it may be safely hinted that as vermin dogs, the buil-terrier, the Irish terrier and the Skye are superior to the other varieties most usually associated with this class of sport. of sport.

the other varieties most usually associated with this class of sport.

A somewhat curious system adopted by admirers of certain classes of dogs, is the custom of improving the appearance of these varieties by recourse to mutilation. The ears of certain working breeds of terriers are cropped for beauty and for use, we know, but what advantage is there in removing the tail of a toy spaniel or a fox-terrier? In former days both Dalmatians and pugs used to have their ears entirely removed; but of late, the barbarous practice has been discontioued. As regards the clipping of a poodle, opinions differ with respect to the orthodox crop, many holding for the style of one professional clipper, while other fanciers patronize his rival ull which considerations tend to prove that in dogs, as in other things, so much depends on caprice that there is even yet a chance for the most uninviting and unlovable to succeed with patience.—Live Stock Journal.

THE RINGING AND THE DINGING OF THE BELL.

Montreal. April 13th.

Some three years ago, when on a visit to a friend, I was very much taken with the looks of a little spaniel puppy that be showed me. He was not by any means thoroughbred, for though his sire was a thoroughbred therefore, the showed me. He was not by any means thoroughbred, for though his sire was a thoroughbred trish water-spaniel, bis mother was cossed with, I think, a cocker. The puppy was dark liver-colored, rather curly, and, what attracted me, had the broad forehead and frank, honest eyes that always nark a dog of genius. I traded another dog for him and took him home, and a more really intellectual dog I never owned. I was an invalid at the time, or partly so—too sick to go to school, but just well enough to play, as my fai-her sid, consequently I had plenty of time to train brin; and at eleven months old he would go back a mile for my whip, would goke up either my whip, hat or handferchief, always taking the right one, no matter how I tried to puzzle him, would down-charge so suddenly that you could hear his bones strike the floor as he fell, would roll over, sit up, do the "screent," walk on his hind or front legs, walk lame on any foot, and a thousand and one tricks that I have forgotten by this time. His especial favorite was an old soft felt hat that I wore knocking round the yard. He would pick to ut from any number of other hats, and would go home and get it off the rack and bring it to me, from almost any distance. Many a time

be pulled the whole rack over in his efforts to get it when

he pulled the whole rack over in his efforts to get it when hung too high. At that time I used to go for a walk every morning before breakfast, and it was during those walks that Leo got most of his training; and as I was, and ann, a very heavy eleeper. I had great difficulty in waking early enough. I had heard of dogs waking their masters at regular hours, and as I firmly believed Leo capable of anything over done by another dog. I thought I would teach him to wake me every morning at daybreak. How succeeded you will read below.

I occupied a large room at the back of the house, with a window opening on the yard occupied by master Leo, Around two sides of one corner of the room were two rows of pegs for hanging clothes, and in this corner was my bed. I tied a cord across the corner about a foot out, and to this cord I fastened a large bell, such as are used by milkmen, which was thus suspended immediately above my head. To the bell was fastened a cord, which after passing through a loop of wire fastened to the celling, went out through the window, and had for its termination an old felt hat, whileh hung about two feet from the ground. I had tied the hat there loosely before, and made Leo fetch it, so that when he awoke at daylight and saw the lart he would try to take it, and thus ring the bell. I had misgivings that he might possibly see the hat sooner than I wished, but the first night being cloudy my plan worked like a charm. Leo, on waking, espied tho hat, pulled it, rang the bell, and I. waking, ran down in a garb more cool than voluminous, patted and praised him, and gave hore cool than voluminous, patted and praised him, and gave him a piece of sugar, his usual reward. The next hight was bright moonlight, and when I went to bed I heard Leo playing about the yard with a neighbor's dor, about 1 a.M. In his peregrinations he ran across the hat and commenced to pull with a will. Ding i ding! ding! went the bell, but I calmly slept on. I was in my first sleep, out of which it is almost impossible to was rest

"George! George!"
"Yes,"
"For goodness sake stop that bell."
At that moment the bell stopped, and my father, having told me to fix it so that it would not ring again, went back to bed, and hardly was his back turned than I was fast asleep. About an hour after, the bell started again, and after standing it as long as she could, mother sent father in again, with precisely the same result; bell stopped for a time and then went on with renewed vigor. At last, when poor mother had had her night's rest hope, lessly ruined she came in herself, and insisted on my getting up there and then. This thoroughly awaken d me and I pulled up the string, leaving the hat, however, in Master Loo's teeth, and next morning that hat was scattered to the four winds of heaven. I got an awful chaffing at breakfast, and even yet they have not forgotten my patent alumi clock. I would have experimented further, but as the other members objected to having that infernal bell dinging all night, I had to give in to the majority.

the majority.

My early morning walks came to an end at about the the majority.

My early morning walks came to an end at about the same time, so Leo's occupation as a bell-ringer was gone. How he would have succeeded in a more legitimate line of business, namely, retrieving, I cannot say, as I sold him for the, to me, magnificent sun of \$10, and cried all night at losing my playmate. I was but a lad at the time, and but that I wanted to buy another dog, my cocker bitch Brownie, nothing would have induced not osell him. His purchaser was a kind-hearted gentleman who had taken a fancy to bin on seeing him fetch a refractory baby brother to me by the skirt of his dress. He very soon became as fond of Leo as I had been, and there were tears in his eyes and in his voice when he told me that the fellow had been poisoned. I will not soon forget the choking sensation in any throat as, after having with mingled pride and grief, made Leo do all his fricks, and kissed him good-by. I walked down stairs from Mr. A.'s office, with a \$10 bill in my hand; and what a void there seemed to be, without the patter of his feet and the jingle of his collar attending my every step. Ten dollars was a bigger sum than I had every before called my very own, but I felt then, and I feel now, that no amount of money can compensate for the loss of such a faithful friend.

no amount of money can compensate for the loss of such a faithful friend.

I became very much attached to his successor, Brownic, so much so that when she too was poisoned last summer, after three years of companionship, when I looked hack at all the counfort she had been to me during my first year away from home, and thought of the many, many hours I had spent, happy in her companionship, and when I thought what a blank her death had left in my little world, and how deep my grief was, I determined never again to have a single dog; either mone, or two or three. I have four now, two of them daughters of Brownie, and although they are, perhaps, not so well-trained, nor so much company, my affection is civided amongst them, and I would not miss any one of them so much. Besides, my fondness for them is largely composed of pride in their beauty, which is not inconsiderable, and their prize-winnings, which are neither few nor unimportant. To these I hope to add during the preant month. I sometimes regret, this change in my feelings, unimportant. To these I libpe to add during the present month. I sometimes regret this change in my feelings, and wish for the old style of thing, in fact I have serious thoughts of getting a little pet dog for the house. No friend is half so loving and forgiving as a favorite dog, and this fact entitles them to every consideration. Be kind to your pets and give them a little affection in return for the adoration that is laye-hed on you. Dipo,

PROF, HUXLEY ON DOGS.

S O distinguished a scientist as Prof. Huxley has been giving his attention to the D giving his attention to the Dog, and the problems connected with its origin and proper place in nature. He has recently delivered two lectures upon the subject, a digest of which, taken from the London Live Stock Journal, we reproduce below:

Prof. Huxley delivered on Tuesday afternoon, to a distinguished audience, at the Royal Institution, the first of two lectures on "Dogs, and the problems connected

with them." He commenced by remarking that there was no animal in which man took so profound an interest as the dog. There was no animal treated so completely in the same manuer as man treated the most valued and trusty friends of his own species. Man admitted the dog to share his own courts, to the intimacy of his own hearths and homes; and to complete the parallel, be

the dog to share his own courts, to the intimacy of his own hearths and homes; and to complete the parallel, I commonly treated him with as great neglect and carclessness, yet ever turning to the dog in the fulfilled expectation that he would obtain from him undiminished affection. Therefore, he thought his hearers might take some interest in endeavoring to ascertain, what was the place of the dog in the economy of Nature.

Now, it might have surprised some people to discover that they have been in the habit of using terms which, when they came to be put straight out, appeared to contradict convictions which they held very strongly. That was very much the case of the dog; for taking the physical nature of that animal to begin with, there was probably no one present who had not, in regard to it, repeatedly employed such terms as head, eyes, ears, nose, neck, trunk, chest, limbs, skull, back-bone, or leg-bone. Those terms applied to a considerable extent in precisely the same sense to parts of the human body; and therein was an implication that the users of such languages had unconsciously become aware of a fundamental similarity between the physical and mental organization of the dog, and the physical and mental organization of man. And his unity existing between the dog and man was very striking, not only in relation to the physical nature but the moral nature of the two animals.

Taking first the question of physical similiarity, Prof. Huxley pointed out by the aid of a diagram, in which force was given to the illustration by the skeleton of the animal being raised on bind legs, that is intermal construction the only difference between man and dog was one of size and proportion. There was not a bone in the one which did not exist in the other—not a single constituent in the one that was not to be found in the other.

animal being raised on bind legs, that is internat construction the only difference between man and dog was one of size and proportion. There was not a bone in the one which did not exist in the other—not a single constituent in the one that was not to be found in the other. In the case of the dog there was not that which, on superficial examination, answered to the collar-hone of man; but close dissection would disclose, in the case of the lower animal, a little bone, varying in length from a third to half an inch, occupying the same place as the human collar-hone, and which was indubitably a rudimentary collar-hone. It appeared to be of no functional imperance, but there it was. The great toe, which was conspicious in the man, was only rudimentarily represented in the dog; but that was a difference only of form and proportion and of artitude. Man and dog were constructed by the same plan as two churches built in the same style of architecture, but differing in detail.

Considering the psychological nature of the dog, the lecturer remarked that he might be met at the outset with the objection, "Talk of the mind of a dog; why, I don't believe he has a mind." Well, the only reason he had for assuming that the dog had a mind was the same exame the which he exame that minds the only as a case of the dog in the mind of a dog; why, I don't believe he has a mind." Well, the only reason he had for assuming that the dog had a mind was the same exame the which he exame that all measure the dominate.

don't believe be has a mind." Well, the only reason he had for assuming that the dog had a mind was the same reason by which he assumed that all present had minds: there was no direct evidence of the fact any more in the one than in the other. He proceeded in this matter on the plain ground of common sense, which led them aright in their daily affairs, and upon which was founded the genin their daily affairs, and upon which was founded the general axiom that, where there was nothing to the contrary, like causes produced like effect. Run a pin into a man, and there was a start and a cry, by which they came to the conclusion that pain had resulted. Run a pin into a dog, and there was a howl and attempt, perhaps, to bite, by which we inferred that the animal was in a state of consciousness in which it also suffered pain. Could they say that the dog was a mere piece of animate machinery? It was quite true that certain philosophers had held views of that kind, but common sense people would not have it, and he believed the common sense people would not have it. And once they denied that there was the smallest foundation for supposing that under the same condition which And once they deficed that there was the smallest founda-tion for supposing that under the same condition which produced pain to human beings dogs were incapable of feeling, then the whole question of the mind of the dog was granted. At the same time he was disposed to think that in dogs the feeling of pain was infinitely duller than in human beings.

that in dogs the feeling of pain was infinitely duller than in human beings.

As to the other senses belonging to dogs, he was inclined to doubt very much if dogs outletsee with anything like the distinctness of men. Their hearing was indisputably very acute; but it was a remarkanole fact that sense was regulated on a totally different scale in dogs as compared with human beings. Did they everhear of a dog taking a pleasure in music? On the contary, the sound of musics seem to cause him acute pain, necessary, the sound of musics seem to cause him acute pain, necessary, and the spot at which he was subjected to the torture. Else, when a German band was doing its worst in the streets, why did he sit upon his hamnehes and howl when he might get up and run away. Yet he often wondered whether dogs really did suffer pain from music, or whether they howled purely in sympathy, as did the jackals of the prairies. The sense of smell in a dog was something marvelous—marvelous not only for its delicacy, but for the fact that its discrimination of what was agreeable and disagreeable was exactly the reverse of ours. They never heard of a dog being infatuated with lavender water, or patchouli, or Eau de Cologne; he rather revelled in the smells which to men were a source of unfeigned horror and digust.

He once possessed a dog which he frequently left among the thousamis frequenting Regent's Park, to secreta timest behind a tree. So soon as the animal found.

feigned horror and digust.
He once possessed a dog which he frequently left among the thousands frequenting Regent's Park, to secrete timuself behind a tree. So son as the animal Found that he had lost his master he laid his nesse to the ground, and in that manner very soon tracked him to his hiding place. That showed that the dag had the power of distinguishing the particular modification of the leather of the boots caused by the wearing of his master in contradistinction to the modification produced by hundreds of thousands of other people present at the moment. As to the ability of dogs to find their way from place to place, he believed there was an unconscious registration in their minds of the visual pictures presented to it in the various tracks through which they passed, and that the mentory worked backward until the animal reached its destination

No one could doubt the moral disposition of dogs. No one could doubt the moral disposition of dogs. Some were trustworthy, others more or less thieves; some were anniable, others vicious, and so on. Neither was there any doubt that a dog had ideas of equality and inequality. They could easily settle that point by offering a dog a large and a small piece of meat on the same dish, and by observing which he took first. Indeed there was

no fundamental faculty connected with the reasoning no fundamental faculty connected with the reasoning powers that might not be demonstrated to exist in dogs. Now, while there was this unity between dog and man, he did not mean to say that the difference between them was not very great, but the difference between them was not very great, but the difference was strictly a measurable one. In the one case, the intellectual product of the individual was limited to the individual. It could not get any further, and the individual had ne power of acquiring sensation or experience except for himself. In the other case, where there was speech and the experience implied by speech, together with the capitalization, so to speak, of the cooperative senses, there was no reason why the progress of man in the direction of divergence from the dog should not be infinite—and that was exactly what lad happened. Man had left the that was exactly what had happened. Man had left the dog behind, as their poor tiffieth cousin, ever faithful, ever intelligent, and with great mental gifts and capacdog beland, as their poor fittieth cousin, ever faithful, ever intelligent, and with great mental gifts and capacity, but sadly ignorant of the three R's and all the learning that followed thereon.

After illustrating by means of diagrams the voriations of the dog as now extant, in the wolf, jackal, and other animals, Prof. Huxley concluded his lecture amid hearty sundans.

applause.

SECOND LECTURE.

Prof. Huxley began by stating that in his last lecture he had endeavored to fix the position of dogs in the scale of animated nature. He pointed out that within the carnivora there was a particular division embracing some thirty or fifty different forms which constituted the dog kind, and which had a much closer community of structure, both physical and nontal, with one another than they had with other members of the carnivora family. The points on which they presented a great and remarkable difference from other animals built on the same plan were in the structure of the skull and in the organs ily. The points on which they presented a great and remarkable difference from other animals built on the same plan were in the structure of the skull and in the organs contained in it—the teeth. It was on those points that he desired to ascertain the amount and extent of the difference which obtained between different forms of dog-like animals. Over the brow of the wolf there was a great cavity: but if they looked at the skull of the fox, they found that the shape of the brow was very different, and there was no cavity at all. They could arrange all the skulls of the dog-like animals into two series—in which one had essentially the character of the fox skull. He could not tell the significance of these differences, but the fact remained that the skulls of dog-like animals could be arranged into two series—the Alopecids, at the head of which was the fox, and the other the Theoids, at the head of which was the wolf.

This enabled them to place the position of the domestic dog still more definitely, and it would occupy a place in the series corresponding with that in which they had placed the jackals and wolves. With regard to the stag-

in the series corresponding with that in which they laid placed the jackals and wolves. With regard to the stag-hound, the shepherd's dog, and many of their cur dogs, no one would have the smallest hesitation in placing them just between the wolf and the jackal. Some of the domestic dogs presented some curious features. The Newfoundland dog had a large development of skull, which gave it a great appearance of sugacity. This ap-pearance of sugacity in the contour of the skull, like that appearance in man, was not always genuine, but turned pearance of sagacity in the contour of the skull, like that appearance in man, was not always genuine, but turned very largely on their being there a considerable empty space. In some cases, as in the Blenheim spaniel, this development was due to real bonu fide brain; and the Blenheim spaniel was undoubtedly the product of domestication, and great selected breeding. They now came to speculations and problems which could only be solved by a careful interpretation of the facts within came to speculations and problems which could only be solved by a careful interpretation of the facts within their knowledge.

The first of these problems was the origin of the domes-

their knowledge.

The first of these problems was the origin of the domestic dog, and he thought they could see their way to solving it, if they began upon a solid basis of fact. Such a basis of fact was supplied by what they knew of the origin of dogs in America. The Indians of the north-western parts of America were all in possession of half-tame cur-like dogs, living in the same way as the dogs in Egypt—in a semi-independent condition. In the same country there existed a wild animal—the Cavis lattrans, or prairie wolf. It was impossible to point out any distinction between these prairie wolves and the domesticated dog of the Indians. It was somewhat difficult to understand how these wild and fierce animals could be tamed; and yet, when one knew their habits, it was easy enough. The smaller wolves and jackals, although predactions and fierce, were endowed with singular curiosity; that curiosity directed them toward man and his doings. There was not one of these animals which, if caught young—whether jackal or small wolf—could not be tamed and made as attached and devoted to man as any ordinary dog. It was not difficult to understand, therefore, how these animals became acquainted with man, how they became trained, and how from them sprang a race of domesticated animals which, curiously enough, were far more attached to their masters and the animals with which they were brought up, than to members of their own family.

If they could depend upon the fact that this one domestic doe originated in the taming of an indigenous

their own family.

If they could depend upon the fact that this one domestic dog originated in the taming of an indigenous wild origin, then the general problem of the origin of domestic dogs would take this form: Could they find, in all parts of the world in which domestic dogs were known, wild stock so similar to the existing race of degs that these these would in which domestic managing the their these was not him under the property of the these world in which the state of the s wild steek so similar to the existing race of dogs that that there was nothing unnatural in supposing that they had the same origin as the Indian dogs? They might trace dog-like animals further and further west, until in Northern Africa they had a whole series of kinds of dog-like animals, usually known as jackals. He believed that these wild stocks were the source from which, in each case, the savages who originally began to tame dogs had derived the stock. This view was confirmed by archreological researches. They had preserved to them, on the monuments of ancient Egypt, a great variety of forms of dogs, and it was significant that the further back they went the fewer were the varieties, until at the time of the third and fourth dynasties—that is, about 6,000 years ago—there were only were the varieties, until at the time of the third and fourth dynasties—that is, about 6,000 years ago—there were only two well-marked forms of dogs. One of them was a comparatively small, our-like dog, similar to that which was to be seen in the streets of Cairo at the present day, and the other was like a greyhound. The cur was, no doubt, a tamespecies of the wild jackal, which was still be found in the same country; and with respect to the greyhound, there was in Abyssinia a very long-headed dog, which was very much of the same form as the greyhound, and which, it could hardly be doubted, was the source from which it sprang. Assuming that there was

no doubt that the origin of dogs could be traced to these no donot has the origin of does could be traced to these sources, the more modified forms of the domestic animal were simply the result of the selected breeding, which had given rise to the same modification in dogs as it had done in the case of pigeons. This was the solution of the origin of domestic dogs, to which all their information and inquiries pointed, and there remained the question of the origin of dogs in general.

A Dog Story from Gibralter.—A horrible tragedy as nearly enacted the other day at Gibralter, just when the Himdleyga was about to weigh anchor off the New tole. In the excitement of the moment a pet dog fell was nearly enacted the other day in towns of the New Mole. In the excitement of the moment a jet dog fell into the water, when a large foctopus rose to the surface and gave chase, making greedy grabs at it with arms quite two feet long from end to end. When the enemy was about to close on its victim, a sailor fresh from foreign parts appeared on the scene, and dragging from his much tattooed breast a rival pet in the shape of a marnoset, sent it to the rescue in a basket.

The little creature, half cat and half monkey, must have been acquainted alike with its duties and the English language, for it did not seize the octopus, but, laying hands on the dog, was safely drawn up, to the disgust of the enemy and joy of friends. Altogether it was a pretty piece of byplay, when tender hearts were solbhing adieux to brown hands waving affectionately from every porthole to the military strains of "Auld Lang Syne."

hole to the military strains of "Auld Lang Syne."

The Watch-dog Institut.—On a high shelf behind his counter a Mexican trader kept a cage, containing a more or less happy family of squirrels and opossums and two monkeys, a capachia and a young ceboo (Atlees paniseus); and one night, between 2 and 3 A.M., he heard the latter animal screeching away with all its might, and soon after hurried footsteps on the veranda in front of his store. ** * The would-be marander had left a track of dirty boots between the wharf and the store, but, as there were no marks on the counter, he could not have hurt the monkeys or even troubled their cage; and the alarming of the little ceboo is therefore a curious instance of the manifestation in a quadrumanous animal of an instinct, which in general may be said to be confined to one species of manmals and a single genus of birds—the canines and the goose. All other domestic animals witness the plunder of their master's property with perfect unconcern; and even the sagacious horse may be obducted by midnight thieves, without betraying its lear by the slightest sound.—Dr. F. L. Oswald, in Lippincolt's.

Archery.

Address all communications "Forest and [Stream Publishing Company, New York,"

THE HIGHLAND PARK ARCHERS FIRST TARGET MEETING FOR 1890.

THIS flourishing society, one of the oldest and best organized in the United States, held the first of its four annual torget days at the club grounds, Highland Park, on the 27th of April, in the presence of a large and enthusiastic concourse of spec-

Highland Park is one of the most delightful suburbs in the Ingniant Park is one of the most deligation statists in the West located twenty miles north of Chicago on the shores of Lake Michigan, it lies 100 feet above the water, and forms a perfect network of beautiful flower-decked ravines. The breezes from the lake are always cooling and refreshing, and no more lovely spot for archery could be found.

lovely spot for archery could be found.

After a continuous down-pour of rain up to the evening of April 26th, accompanied by bleak March winds, the morning of the 27th opened with a clear sky and balmy spring atmosphere, and the hearts of the archers who had taken target fickeds were made glad with the auspicious brightness. At 11.30 r.m., the train from Chicago brought a large number of visiting archers and spectators, among whom were Mr. S. E. Lean, Mr. W. B. E. Schufeldt, Mr. Juo. Wilkiuson, Mr. J. O. Blake, Mr. J. R. Adams, Mr. W. L. Shepard, Mr. Walter Burnham, Mr. J. M. Fairfield and Mr. Brown, guests of Mr. Ge. Carver, and A. G. Spalding, Est, guest of Mr. Geo. Isil. . Ball.

of Mr. Ceo. Ban.
The targets were placed 30 yards apart, the ladies facing F and
G, and the gentlemen, A, B, C, D and E. Promptly at 2.39
P.M. the shooting commenced at the Double Club Round, viz: 76 arrows at 50 yards, and 48 arrows at 40 yards, for ladies, and 96 arrows at 30 yards, and 48 arrows at 40 yards, for holes, and 56 arrows at 50 yards, for holes, and 56 arrows at 50 yards, for gradience. In view of the ladies having had no practice this season they did uncoperedidy well. On the first round good secting was done by Miss Street, Miss Denison, Mrs. Lesher and Mrs. Goodridge, at the longer range, and by Miss Denison and Miss Street at the 40 yards range. Mrs. Swartwout shot steadily and well throughout the day. Mrs. Carter got 3 reds with her last end at 40 yards, and con-sidering that sho has had no experience as an archer, her record on this occasion was reinarkable. Mrs. Ball, Mrs. Carver, Mrs. R. J. Street and Miss Hammond did easy and graceful execution, and

J. Street and outst manning and easy and green of execution, and give promise of high scores ere the season closes.

Of the gentlemen, Mr. Carver led the score on the first round at the 80 yards range, getting 78-116 with his 43 arrows, followed closely by Mr. Hall with 27-107, Mr. Fairfield (visitor) leading at 60 yards with 21-89, Mr. Burnham a good second with 18-82. On the yarus with 3-26, art. Dirinkin a good second with 18-82. Off the second round Mr. Hall again showed in good form by scoring 23-123 art the lower range, Mr. Adams (visitor) closely following with 21-125, and Mr. Burnham (visitor) getting the best 60 yards second

of the day, 19-105.

Special mention should be made of the skill shown by Mr. Special mention should be made of the skill shown by Mr. Adams, who first commenced shooting late last fail, having had no out-of-door practice. He recently secret, with 21 arrows at 60 yards, 24-151 in the Exposition Building, Chicago, Mr. Burnehim at the same time getting 24-15 at the same distance, and at 81 yards with 21 arrows, 21-16. Mr. June. Withinson shot with great regularity and precision, his total secret long sixth best of the day. The occasion was one of gala good cheer from begin ning to end, and every archer and spectator felt that the archery coason at the Park had commenced well, Letters of repret were received from many archers who were invited to be present. The second regular target day of this society will take place in June. PRIME 1487.

section regular target day of this society wit have place in almo-PAUZE 1487. LADIES.—Pirst score, 50 yards, 5iiss Janie Street, 35-125; socion, Mrs. N. E. Swartwout, 29-115; third, Mrs. R. Carter, 27-101; fourth Mrs. W. S. Lasher, 35-39; 1ftth, Mrs. W. M. Goodridge, 22-75; sixth. Mis Denison, 19-75; poorest score, Mis Hammond, 10-20. First score, 40 yards, Miss Denison, 32-138; second, Miss Street, 32-144; third, Mrs. Lasher, 23-94; fourth, Mrs. Swartwout, 13-34; fillh, Mrs. Carter, 19-62; sixth, Mrs. Goodridge, 15-61; poorest score, Mrs. Street, 4-14; greatest gross score, Miss Street, 61-230; greatest score, not having won a prize, Mrs. Carver, 39 119; gros ore, nearest approaching 100, Mrs. Goo. Ball, 22-86; most golds.

Score, nearest approaching 160, Mrs. Gao. Ball, 23-26; most gold;
Miss Denison, 6.
GESTLAMIN.—First score, 80 yards, Mr. Hall, 54-256; second, Mr.
Chrver, 33-211; third, Mr. Kyle, 33-162; (ourth, Dr. Weston, 53-124)
fifth, N. E., Swartwoot, 37-125; Sixth, Mr. Hammond, 34-10; poorest score, Rev. G. L. Wrenn, 34-13. First score, 60 yards, Mr. Ball,
93-160; second, Mr. Carver, 34-163; third, Mr. Hammond, 34-121;
fourth, R. G. Street, 33-122; filth, Dr. Weston, 34-129; sixth, Mr.
Kylo, 33-147; poorest score, Rev. G. L. Wrenn, 3-4; greatest gross
score, Mr. Hall, 92-206; most golds, Mr. Carver, 7. Mr. Will H.
Thompson's prizo to the archer whose 81 yards's score should
exceed his 60 yards's score by the greatest number of points, Mr.
Hall, 76; visitors' prize, or yreatest gross score, Mr. Adnas, 83396. Special prizes, consisting of fancy design work, lawn racks,
quivers, tassels, etc., were presented.
The most prominent personal contest, during the shooting, oc-

The most prominent personal contest, outring the smooting, or curred at larget C, between Mr. Schuyler M. Coe, and the Rev G. L. Wrenn, for the two prizes (rubber target guns) for the poorest score, both of which were fairly won, and carned, by the Rev. Mr. Wrenn. Note—"v" stands for visitor.
Mr. S. E. Egan and Mr. W. B. E. Shufeldt, of Chicago, were present, but did not shoot. Forty-one prizes were confested for, and will be awarded with appropriate speeches by the president, Dr. E. B. Weston, at the regular meeting of the society, the first Tuesday in May.

EASTERN ARCHERY ASSOCIATION .- The regular annual business Eastraca Archis Associations.—The region annual ons ness meeting of this Association was held at Boston, April 28th, Pres. Brownell in the chair, and the following delegates present: Pequossette Archery Club, Misa Alice Ingraham, Samil, P. Abbott; Hawthorne Archers, Miss J. Wilson, Dr. Jas. Dwight; West New-Hawthorne Archers, Miss J. Wilson, Br. Jas. Dwight; West Newton Archery Club, Miss Rosa S. Allen, Geo. A. Mower; Ispna Archery Club, Miss L. S. Clark, Herbert W. Newhall; Orltani Archers, W. Holberton; Brooklyn Archery Club, E. I. Horsman;
Lewiston Toxophilites, Dr. O. A. Horr. It was voted to hold the
annual meeting at Bescon Park the first week in Soptember. The
following officers were cletted for the following year; President,
A. S. Brownell; First Vice-President, Miss Josephine Wilson; A. S. Brownell; First Vice-Fresident, Miss Josephine Wisdon; Scond Vice-President, Col. Frank Brandreth; Corresponding Secretary, John Worcester; Recording Secretary, N. D. Abbott; Treasurer, Miss Alma C. Walker; Executive Committee, George Smith, C. A. Mowell, C. L. Walker, The Burght, John B. Cotton, S. P. Abbott, E. A. Mowell, This is substantially a re-election of the old Board of officers.

Archeny in the Sandwich Islands.—Paihilm, Mani, Hawai-ian Islands, April 7th.—Editor Forest and Stream:—Though Mr. Thompson asserts that our English friends have given the subject of scoring such thorough study that it would be folly for others less experienced to make a change, is there not an almost sef-evident blunder in the present method of scoring? If so, will any reasonable person object to a change which will insure

greater accuracy.

By the present method, counting from the center, each ring decreases in value by two, as far as the white; but the difference in value by two, as far as the white; but the difference in value of an arrow in the white, and one that misses the target is but one. Here, surely, is an error. It would be more accurate to adopt the series 9, 7, 5, 3, 1, -1; or, 11, 9, 7, 5, 3, 1-a miss baying

to adopt the screen, 1, 3, 3, 4, -1, 0; 11, 3, 1, 6, 1 -2 aims and in the value of I. Would it not be still better to give the gold a value of I, and the other colors the values of 3, 5, 7, 9, 11; for thus the true relative values of scores would be given.

At present an arrow in the gold has a value only 14-5 times greater than one in the blue; whereas, by the above method, its value would be five times as great. This is the correct ratio, for

the average gold is 2; inches from the center, of five times nearer than the average blue, which is 114 inches from the center, of five times nearer than the average blue, which is 114 inches from the center. The values 5, 4, 3, 2, 1, 0, suggested by Mr. Brownell, would clearly be more accurate than the present values, for they decrease uniformly to zero.

It may interest some of your readers to learn that a club, styled the East Mani Archers, has recently been formed in this place, and it is rumored that one will soon be started in Honolulu. As all s here are caughly debutiful for out-door practice. hopes of hitting the gold by-and-bye. W C BINDS

Answers to Correspondents.

Correspondents who may send us their proper name and address will always receive prompt attention in these columns. We require a man's name for two reasons: (1) sometimes as a quarantee of good faith, and (2) always as a matter of common courtesy. As a rule we do not reply to inquiries by mail, except in cases demanding immediate advice.

E. E., Lawrence, Mass.-Impossible to suggest treatment from your description; write more fully, stating length of time your setter has been sick.

Evans, Philadelphia.—Try Glover's imperial mange cure which can be had of Joseph C. Grubb & Co., 712 Market street your city. It is said to be excellent.

H. H., Pittsburg, Pa.-Three injections, one a day, of salt and water, will rid your setter of pin worms. Precede by several hours the first enema by full dose of castor oil.

H. H. H.—Canvas cauoe will be very serviceable for your pur 1988. Directions for building will be found in our issue of Aug 71b. 1879. Nothing like experience to produce a finished and sat

H. W. J., Chicago,-No invoice of new edition of Dixon Kemp's Yacht and Boat Sailing received in America yet. Will not arrive for six weeks yet, the enterprise of American book houses being about coual to that of a fossil.

SUBSCRIBER.-You neglect to state the length of time y STIBSCHEER,—You neglect to state the length of time your set-ter his been sick. If the dog has never had distemper before, it was probably a light attack of the disease. Keep warm and dry, and give him two grains of quinine three times a day for several weeks. Exercise and proper food will bring him about all right.

INQUIRER.-Roughly speaking, we should say that two tons or INQUINER—Hong bity speaking, we should say that two tons on the keel, as you propose, will have as much effect as three tons inside. Would advise experimenting with one ton this season. Light displacement is, however, no longer viewed with the same favor as it once was, and the tendency is in the opposite direction, as heavy displacement produces abler and roomier houts.

POINTER, Camden, N. J .- Dogs can be broken ether to point POINTER, Canden, N. J.—Dogs can be broken ether to point dead or not. We do not see any occasion for making any deg do so, however, and cannot see what benefit is derived from training a young dog to point dead, except in teaching him, when first introduced to game, to retrieve it without biting or gripping it. Dogs can distinguish at once, by the scent, whether the bird is alive or dead, in paper fifth on "Dog Breaking," this disputed point will be fully discussed. We refer you to it, as it will appear except.

J. W. B., St. Davids, Ont .- Your setter puppy has intern J. W. R., St. Davids, Ont.—Your setter puppy has internal can-ker. Wash out daily each ear with Castile soap and tepid water, dry with piece of soft sponge. Fill each ear twice a day with fol-lowing lotion: one teaspoontfu of Goulard's extract mixed in two tablespoonsful of water. The cap over head to prevent flapping of the ears, and dispense with all meat in dog's dist. A mild dose of Eppons salts once a week, with water, will be found beneficial. Mix controlles with dog's food. Mix vegetables with dog's food.

M. J. N., Onelda, N. V.—No solid food should be given, but food such as strong meat broth and mush, with which mix well boiled vegetables. Give two grains of quinine three times a day for several weeks, and should there be any constipation give castor Should the mucus choke or stop up the throat, give doses o oil. From the induced color of the prince through year as all and water. Keep dry and warm. Allow free exercise and fresh water. Persevere in this treatment, and you will find your puppy will soon be off the sick list.

J. F. P., Augusta, Me. - My pointer, three years old, droots from J. F. P., Augusta, age.—My pointer, three years on. Conservations the mouth, and has, since he was a year old. Chu anything be done for him? Ans. The drooling is one of the results of distemper ta judicious course of treatment may lessen the difficulty, but it is doubtful if an effectual cure can be effected at this late day. You may, however, give small doses of calonic, say three grains twice a week for three weeks, and commence after first dose of calomel administering quinine, two grains three times a day, this to be continued for same length of time.

CANARSTE.-Strictly speaking, the term "cutter" applies only CANAISTE.—Strictly speaking, too term "cutter" applies only to a certain style of rig; the same as the terms "schooner," "sloop," etc. The cutter has a fore staysail and a jib, generally set lying, or upon its own luff. In the discussion of the qualities of different kinds of yachts, a wider meaning is generally attached to the term "cutter," implying not only a beat rigged as such, but also one having moderate beam and greater depth than the sloop, and supplied with a keel with more or less ballast out-tied. It is a unique the form the suppose that cutters are processable of the stoop, and supplied with a sect with more of resonances saily of side. It is a mistake to suppose that cutters are necessarily of much larger displacement than sloops. Such sloops as Mischief Madcap, Violet, Arrow, and many of the best craft we have, displace as much water as an average cutter.

T. T. P., Pearisburg, Va.-You have given dog No. 1 over T. T. P., Pearisburg, Va.—You have given dog No. 1 overdoses of suiphur; aliscontinue it at once. Give from one-cighth to one-quarter of one grain of nux vomica three times a day, and also two grains of quinne three times a day. Continue this treatment for some time, and write result. Your dog No. 2 has evidently passed several segments of tape worn. Fast dog twenty-four hours, give twenty grain's male fern, half bour latter, repeat same dose in castor oil. Dog No. 3, two or three grains of quinne three times a week, and proper food, such as meat broth, boiled liver, butlock's tripos, paunches, etc., mixed with well boiled chimeal and vegetables, will put your dog all right.

Dr. C S. New York City.-Dew-claws are a sort of rudime DE. C. S., New York City.—below-claws and a Nort of indimen-tary fifth too on the inner side of the leg of a hound. The food of a dog should depend upon the exercise that is given him. When a dog is being worked he requires plendy of good strengthening food; and when he is chained up during the close season, a lesser food; and when he is chained up during the close season, a reser-quantity of meat should suffice. Young dogs and pupples should have several feeds a day, but one meal at evening time is con-sidered the best way of keeping a full-grown dog in condition. All dogs should have more or less yegetables mixed with their food, both winter and summer, the quantity to be regulated as regards with of the animals.

W. R. P., Brooklyn, N. Y.-Your dog has the mange; it is abso-

intely necessary that great glandings must be observed. His 'utdy necessary that great, cleanliness must be observed. His bed must be repeatedly changed, and he be allowed force exercise with wholesome, not stimulating food, and plenty of fresh water. In no case should the dog, suffering under this complaint, be allowed to gorge or earn himself, but the vicinals must be withdrawn the instant he has swallowed sufficient to support, nature orawn the insum he has swallowed sufficient to support, butter The diet of your dog may consist of course outmed, well boiled, mixed with boiled potators, and other vegetables. State bread and ship biscuits may be used for a change. Four to seven drops of Fowler's solution of arsenic twice a day in food. Send us your name and address in full and we will give you the informa-

J. K. R., New Orleans.-On March 31st I hunted my pointer all J. K., L., Now Orleans.—On March 31st. Inunted my pointer all day. On A pril 2d 1 found him dead. He was very restless the night and day previous to his death. He urinated so freely I thought his kidneys affected. I cut him open, and to the best of my beiief found all his organs in good condition. I have been told that the owner of the ground over which I shot had seat-tere: poisoned meat in order to kill off sheep killing dogs. Would a dog life two days after taking poison? The dog bad been shot with No. 10 shot two months previous at fifty yards, and bled badly on left side. Could that have affected his health? Ans. Quite possible that one of the grains of shot penetrated a vital part, which only required time to reader fatal. The poison the ry is very improbable.

T. O. S., Boston, Mass.—I have a pointer birth pumpy eight weeks old now recovering from the distemper, from which her dam and three litter brothers died. My puppy is suffering from weakness in hind parts; throat seems filled with mucus at evenweakness in hind parts; throat seems filled with mucus at even-ing, and always after active play. She was covered with sores, which are now partly healed; appetite good; clet consists of boiled milk with bread crumbed in it; once a day, give heef to a and cod-liver oil. Please inform me what I shall do to strengten her and relieve trouble in her throat? Ans. We would recom-mend a counter irritation about the throat, which can be effected mend a counter irritation about the throat, which can be elected by rubbing several times a day with some stimulating limiment, Continue to give teaspoonful of cod-liver oil once a day, and feed with the beef broth. Dry and warm bed, fresh air and sunlight and clean water, will bring about the desired result.

C. G. F., Frederick, Md.-1. A pointer dog has for some time been unwell. The symptoms are at times dryness, and excessive heat of nose, and costiveness; sometimes he will not eat; recently you ited several times. 2. Sometime ago there was a great deal written in your paper about holding shead and holding on a bird. Do you in your paper about holding ahead and holding on a bird. Do you not think this is regulated very much by the gun? I have shot a great many grees and ducks, and have made many good shots, and I always hold on or aim directly at the object. My opinion is, that, with a choke-bore, one should hold ahead, and with a cylinder bore, on the object. Ans. I. Give your pointer three compound eathertic pills, follow on the next or fourth day, with easter oil. Allow plenty of exercise, and one good feed a day will be sufficient to keep your dog in condition. He has probably been over feel. 2. It is a simple law of natural philosophy which both theory and practice demonstrate. theory and practice demonstrate.

J. R. R. Outario,-My setter, three years old, was attacked last 1. B. B. OHGERD.—Sty Setter, titree years old, was at massach assummer with a sore on the bottom of one of his toes, as if he had stepped on a hot fron and burnt it. It did not get well until his shoulder broke out in a fearful mass. This spring the other toe, on the same foot, is attacked in same way. The dog is well cared on the same foot, is attacked in same way. The dog is well cared for and has plenty of exercise. What shall I do for him? Ans. Your dog has one of the many kinds of mange. Dress every day with following mixture: Powdered bicarbonate of points, one ounce; powdered white vitrol, one-quarter of an ounce; sublimated sulphur, two ounces; lard, eight ounces. Rub theroughly into skin. Wash feet with Castile soap and water and apply infainto skin. Wash feet with Castile soap and water and apply mis-ture to the pustules between the toes. You had then better put boots, made either of soft leather or canvas, on the sore feet, Give flee drops of Fowler's solution of arsenic, twice a day, and gradually increase dose to seven drops. It may be given in food, and must be continued for some time to be beneficial. See answer No. 1 to "W. M. P." in this column, regarding proper dief, etc.

G. A. S., Westfield, Mass. -You are perfectly correct in your diagnosis of the case of the dog—he is in a terrible condition. There is something else to be learned than how to dose a dog there is something ever to be tearlier annown obes a tog when he is sick, that is, how to keep him from having to be dosed —when he is well. From want of regular exercise, proper food and care, the dog has become diseased, and only a systematized treatment, carefully followed, will put him all right again. Begin and care, the dog has become diseased, and only a systematized treatment, carefully followed, will put thin all right again. Begin by giving him light, wholesome feeds, from which exclude all meat and grease. The blood having become heated, you should give an aperient of Epsom salts once a week, and a dessert spoonful of sulphur and magnesia in food every morning. Regular excreise should be given, and the dog allowed to have his freedom in some inclosure, where he will be unable to pick up any fin-proper food. Let his runs be in the fields in the country, where he can get grass if he cheese. Observe cleanliness, and make note of Aus. I to W. R. P., in this column. Apply one of the mange dressings recommended in this column; that given to J. B. B. will answer. After giving this treatment a thorough trial, write tully. Should the internal canker increase, which will be shown by the dog's shaking his head and scratching the part afflicted the following lotion pourcel in the ear and held there for a lew moments, twice a day, will probably effect a cure: diluted lead water, one ounce; sulphate of zine, one draehin; and water, twelve ounces. The flaps of the car must be kept from shaking by a cap tied over the head. Read the paper.

VELOCITY OF RIPLE BALLS.—Prof. Spice becently measured before a large audience, the velocity of a ritle ball fired across the stage. The distance was only dirity-three feet. Licut, Merrian cooperated, and his duty was to shoot away, with a Creedmoor rife, two loose wires, each of which connected in an electric circuitt way globules of mercury. One wire was placed just in front of the supported muzzle of the ritle, the other thirty-three feet distant. Two levers were arranged, with bent wire points, over a piece of smoked leasts to which a uniform motion could be ima piece of smoken grass to winned a three on motion count be that parted, and the electric connections were such that on the first wire being broken the point of the corresponding lever descended on the glass; but when the bullet broke the second wire it immediately rose ugain by the action of a spring. The result of this was that the point connected with this lever scarped a very short. thin on the smoked glass. The other point, being kept down dur-ing the swing of a seconds pendulum, scraped a longer space. After firing, the glass was withdrawn, and a magnified image of ing the swing of a seconds pendulum, scraped a longer space. After firing, the glass was withdrawn, and a magnited linage of the lines thrown on a screen. The relative lengths of these lines were then ascertained, the longer being found 10 inches, the shorter five inches, making the duration of flight of the ball 5-110ths or 1-22d of a second, its velocity being 31x2=725 feet per second, or at the rate of a little under 500 miles per hour,—Scientific American.

---WHO GOES WITH YOU?

A POPULAR Boston lecturer, who has visited almost every important Mecca of the European tourist, once gave as his advice concerning the choice of a traveling companion: "First, be sure to select a person whose pocket book is as deep as your own and no deeper; second, select a man whose tastes are similar to your own, who will wish to go where you wish to go, and to see what you wish to see; third, select one of the same mental caliber as yourself; and fourth, select one possessing culture equal to your own. I always travel alone. That last sentence is not so egotistical as it may appear; for it probably epitomizes the lesson learned from a series of wearisome trials of experimental traveling companionships. The experienced tourist is shy of untried fellows.

The hints just given are also applicable to sporting excursions. Whether the man who goes fishing, shooting and camping shall go alone, with a single friend or with a party, depends upon such a multiplicity of "ifs" and "ands" in each individual case that it is impossible to formulate any general rule which shall apply to each particular case. Upon the choice of comrades, however, quite as much as upon the selection of place and time, depends the enjoyment of the trip. Genial companionship will brighten up the most dismal fortnight of cloudy days; and, on the other hand, just as surely will an unsympathetic association convert into jarring discord all the melody of rustling leaf, singing bird and falling water. It must be remembered that two persons, who each profess a taste for camp life or sporting excursions, may yet differ very much in the particular way in which they would gratify such a taste.

For one there is pleasure and profit to be gained by withdrawing from his fellow creatures for a season, to dwell in solitude and retirement amid the influences and studies of the silent forest arches. The old anchorites of the deserts were lunatics in their way, and doubtless deserved their self-imposed austerities. But there was after all a spark of common sense in their creed and practice; and scores of business and professional men to-day, who are constantly thrown into sharp contact with their fellow-men, and who have a very large share

of the cares and troubles of others thrust upon them, might with great profit to body and soul assume for a brief season the tunic of the hermit and his fare of lentils and leeks. There are two ways in which the benefit of such a retirement may be rendered naught: a man may bear unto the woods with him all the perplexing details of his business, and there revolve them over and over again, and so return to his home without once having surrendered himself to the healing influences of the wild woods; and again, the unfortunate pleasure-seeker may be bored beyond endurance by the constant annoyance of an uncongenial and irritating companion. Fortunate is he who has for his coming excursion a friend tried and true, who has been With such a comrade the pleasures of the camp are trebled, and about the fire at night one may live again the summers of the past.

It is an almost universal experience, when viewing alone an impressive scene of nature, to feel a longing for the presence of another to share the emotions aroused lethe occasion. Only as we grow o'der do we learn that were that visionary kindred spirit to draw near, the ir spiration of the moment would be dispelled. Some men never see anything in the changing glories of a sunset. There are souls so bemanacled in this earthly prison house that they can never appreciate a higher gratification than that afforded by plenty of good, cold corned beef and beans-and plenty of mustard. He who does stand eilent before the trailing clouds of glory will be a wise man in his day and generation, if he leave the corned beef and beans wight to bis disb.

GEORGE WASHINGTON AND IRISH WOLF-HOUNDS.

THOSE who read the letter of John Quincy Adams published in our issue of March 25th, will be interested in the following letter, written by George Washington, about the Irish wolf-hound. We are indebted to Mr. R. T. Greene, of Jersey City Heights, N. J., for the copy of the same. It will be remembered that about a year ago there was quite an animated discussion carried on through the medium of the sporting papers, here and abroad, in regard to the extinction of the type of dog called the Irish wolf-hound.

"B. St. George," in his letter which appeared in the FOREST AND STREAM of March 13th, 1879, states in the first part of that communication, that it was generally accepted as a fact that these dogs had ceased to exist although, a little further on, he writes that there still exists sufficient of the true breed, both in the race still known in Ireland as the Irish wolf-hound, and in our modern deer-hound, to allow of the complete recovery of the breed. Interested parties at once made an effort to create a class in the Dublin Show, and the Irish Kennel Club and others were successful in recuscitating the breed, as twelve were entered, and eleven put in an appearance. This certainly was a good beginning toward renewing an extinct type, although, according to D.'s" letter in the FOREST AND STREAM, of April 17th following, they were a slightly mixed class.

It may interest the readers of the FOREST AND STREAM to know how nearly extinct they were considered a hundred years ago, and, at the same time, have the pleasure of reading a copy of a letter written by George Washington. By the way, our friends, who have been abused for selling and buying dog flesh, may find some comfort in the evidence below that so eminent a man as our first President did not consider it beneath his manhood to act as a party to dog sales. The individuals who are inclined to write down all dealers in dog flesh as knaves, might profitably examine the records of the past, and possibly turn their discoveries to political ends.

The letter is addressed to Charles Carter, of Ludlow Farm, Fredericksburg, Va., and reads as follows :-

MOUNT VERNON, Feb. 5th, 178 DEAR SIR:- At length I have got some answer to my application for Wolf Dogs. I wish it was more satisfactory; but such as it is, I give it, as suspense of our situation is the most disa-

The information comes from Sir Edward Newenham, a gentle-

The information comes from Sir Edward Newenham, a gentle-man of family and fortune in Ireland, and is in these words:— "I have just received a letter from your noble and virtuous friend, the Marquis de la Fayette, in which he communicates your wish to obtain a breed of the true Irish Wolf Dog, and desires no to procure it. I have been these several years endeavoring te get that breed without success. It is nearly annihilated. I have heard of a dog in the South, and a bitch in the North of Ireland but not of a couple anywhere. I am also told that the Eurl of Alterment' has a breed that is nearly genuine; if he has, I will procure two from him. The Marquis also wants some at his do. procure two from him. The Marquis also wants some at his do main, where he is troubled by the wolves. If Mastiff would be main, where he is froubled by the wolves. It mastlit would be of any service, I could send you some valuable large ones, which are our guard dogs. You will honor me with your commands about them. They are very fierce, faithful and long-lived."

If upon this information you think I can be further useful, I

An upon this thormation you tunk reas no intrice usering said be happy to render any service in my power. Mastiff I conceive will not answer the purpose for which the Wolf Dag is wanted. They will guard a pen—which pen may be secured by its situation, by cur dogs and various other ways—but your object, if L have a right conception of it, is to bunt and destroy the control of the pen wolves by pursuit, for which end the Mastiff is altogether unfit If the proper kind can be had. I have no doubt of their being se by Sir Edward, who has sought an occasion to be obliging to

I am, dear sir, Your most obedient and affectionate servant, GEORGE WASHINGTON.

SPRING FEVER .- There is a peculiar disease, not treated of in general therapeutics, and yet one so prevalent when the season opens and the game law becomes inoperative, when the spring bursts forth renewing its lusty life and inspiring poet and artist, that it becomes a subject of scrious inquiry why the medical profession has so entirely disregarded it and ignored its claims to a place in the catalogue of human ailments. When the robins and the meadow larks return; when the sparrows commence to mate and the ground birds look about for building sices; when the pansies and the violets emit their perfume and display their charms, there comes stealing over such as are susceptible to it the inevitable spring fever, It comes with the ides of March. Here in New York it begins to appear when the Governor's Island gun booms sundown at 6 o'clock. It comes with the snipe and shad, and casis over its victims an intense and irresistible yearning to visit some favorite trout stream-a yearning so keenly developed that it transforms the best of us into lazy, useless beings, in our own way and in the way of everybody else.

It is not attended with the dangerous characteristics that distinguish typhoid, intermittent, yellow and other fevers. It is not provocative of a desire to die and be done with bodily suffering; but it is attended by a delicious languor, an elegant stupidity, and a lazy worthlessness refreshing to behold. Spring fever does not crowd the hospitals, nor call physicians at the midnight hour, nor fill the heart with alternating hopes and fears. It only makes one an annoyance and hindrance that ought to be banished to the woods, and the woods and the waters are the sovereign remedies, the panacea for it when it assumes its most aggravating form.

The principal symptoms are indicated by fondly caressing your rods, every joint of which is a reminiscence; overhauling and taking account of your flies, in which you evince more interest than ever a girl did over a piece of pretty ribbon; studying maps, telling fish stories and altogether acting as irrational as a man on the verge of marrying. It incapacitates a man for any serious work, and something must be found to relieve it. Be sure that your diagnosis is correct, and that the symptoms indicate an attack of spring fever, then consult the physician, who will prescribe about as follows :-

Bamboo rod, 3 joints, 8oz. Assorted flies, 6 doz. Vacation, 2 to 4 weeks.

Pure oxygen, wild woods, 999999999 gallons.

Eat regularly 2, 4, 6, or 8 times a day. To be taken in the open

Be sure of your physician, and do not stifle your chances of living by following the advice of any one who prescribes differently from the formula above. There is nothing else in the pharmacopoeia half so efficicacious. MILLARD.

A BRACE OF GRESE.—The season in which it is lawful to kill wild geese in this State closed last Saturday. The sport has been excellent at many of the most popular grounds, and gunners have had all the fun they could reasonably ask for. Many a man who has been taught that the saying, "as silly as a goose," as a sufficient index to the true character of the wild bird, has learned the fallacy of such an opinion.

Proverbs and folk sayings are crystallizations of wisdom and native wit. A proverb cannot live if it has no deep tap-root in the common experience of mankind. No man can sit down and write a book of original proverbs. Solomon did not originate all the wisdom credited

Many of the popular sayings of different peoples, especially among savage and primitive races, are founded upon their observations of the characters and habits of the different members of the animal world; and much of the unwritten literature or folk tales of these races is made up of animal legends and stories of birds and Their wisest saws have reference to the silliness of some animals and the subtle cunning of others. full of wisdom and truth are some of these fables that they have lived for centuries and thousands of years, transmitted from generation to generation by word of mouth, perpetuated in parchments, and disseminated in varying forms over very wide portions of the world. Since the investigation of the race relations of different peoples has been stimulated by the study of comparative philology, these legends, myths and proverbs have assumed importance, and such eminent scholars as Max Müller, Ralston, Thoms, Dasent, and others have recognized their value as links in the chain of historical inquiry.

This is wandering away off from our geese and stools and batteries, and we must return to bag our brace of birds, or rather our brace of proverbs. The man who has been cramped up in a warm battery hour after hour, patiently and persistently pitting his skill against the wary cunning of a goose, only to betake himself home at last stiff-legged and sore, as best he can, is probably in a suitable state of mind to appreciate the truth contained in the expression, "a wild-goose chase

We are not disposed to argue with those who think that the other expression, "as silly as a goose," is an erroneous one, and who would have us believe that this term of contempt passes current only because those who employ it don't know what they are talking about. Each expression is true, and bears inherent evidence of its The comparison of a foolish man to a goose evidently arose in the town, among men who knew only the barnyard fowl, the tenant of the village green and wayside puddles, the stupid, waddling, hissing and uncouth creature bred for its feathers. The other figure, on the contrary, the comparison of an unsuccessful pursuit to the fruitless chasing of a wild goose, is plainly an outgrowth of the country, where the wild bird is found in its first estate, a worthy subject of the sportsman's most ingenious devices. Thus each of these figures is true and each is false. If a man think the coose a silly hird, let him try to capture a wild one; if he think the goose a cunning bird, show him a mud-bedrabbled tame one.

NOTES AND QUERIES.

I NDER this heading we propose, as occasion shall deniand, to offer an opportunity for the exchange of notes and queries, and invite our readers to contribute both queries and answers to the inquiries propounded. There are many topics connected with the different branches of sport which afford room for investigation. and sometimes recondite study, while there are a thousand and one bits of local information, like that sent us by Mr. Van Sielen, which would be of general interest if published in the FOREST AND STREAM. It must be understood that matters legitimately belonging to our Answers to Correspondents column proper, will be confined to that department. Now let us hear from that man who always bends his fishing rod into the form of a quotation

THE MEINING OF "WILLOWERDO" -SHIELNGHAM . Party kill Club, May 18th. Over the hill from the Beaverkill is the Wil-lowemoe. It is almost as good a trout stream as the former, but lowence. It is almost as good a trout stream as the former, but the fout are more capitelous. The weather must be just right for you to fit your creek in the Willowence. Lately Mr. Devid P. Secor (wreafter, I believe, of the Secor sewing mach no), happered in my olice, and the beautiful trout of Seribner's Soris, "Gamp 6"sh of America" caught his eye. This led to a blessant consecsation, as which he informed me that he came from the towa c. "Cac-"and, Sullivan County; that his uncle "Rome" (ac "ute) Secor lived there at Westfield Flats, the next station beyond Moreston, c. Willowence; near Peter Newart, who is now eighty-wo years old, and is the son-in-law of Mrs. Darby, whose house the countains many fine andimins by James Gifford, and house the e contains many the paintings by James Gifford, and bouse for a set we obtain many role paintings by since Gibora, and
we have a controlled there while to courties. Grazery Sicwart, to two, learned from the hidrans the meaning of the name. Willowemone's this "The kettle that shakes itself clean," and of the effect
wherean was to called because of its rapid turrent, and of the effect. stream was so called because of its rapid current, and of the effect of the spring freshets, which carry of all the drift-twood, etc., from its banks. Do you not find the name singularly appropriate? Those streams run down the steep hills so fast that it is a wonder that any water is left in them. I wish that now some one who knows would tell me the meaning of the Indian word "Shawangunk," which is pronounced "Shawangunk," up in the "Shawangunk," which is pronounced neighborhood of the mountains so called. Geo. W. VAN SICLEN.

Gun Flints.—Cardville, Pa., April 2d.—There is a man in our thown who says that be has never found any one that can tell him where gun flitts come from, or how or by whom they were made. Please answer through your paper, if you can throw any light on the subject.

R.T.C.S.

GEORGE C. COLBURN.-George C. Colburn, whose name has been for many years so familiar to the sportsmen of America, died at his residence in this city, after a brief illness, last Saturday, May 1st. Mr. Colburn was for many years a prominent dry goods merchant in New York, and was at the time of his death about fifty years of age. As the owner of the Gordon setter Dash, of the lemon and white pointer bitch Belle, and other famous dogs, Mr. Colbarn was widely known, and always held a prominent position among those who were interested in the importation and breeding of fine stock in this coun-Mr. Colburn was a genial, generous man, possessed of many warm friends, and highly esteemed in his business and social relations. The news of his death will be learned with unfeigned sadness by many of our readers who enjoyed his friendship.

Notes.-The course of civilization has ever been westward, and it is in conformity to this rule that archery has crossed the Rocky Mountains, and has extended its gentle sway to the isles of the Pacific. It was not so many years ago that we were reading about the Sandwich Islanders putting aside their bows and clubs and nakedness to assume the utensils and habiliments civilization.

A hint to some five or six of our esteemed daily contemporaries: The mere fact that a gentleman is connected with the editorial staff of a sporting weekly is not a sufficient reason for dubbing him "Colonel,"

The Blooming Grove Park is advertised to be sold at Sheriff's sale on May 17th, to satisfy a debt of \$71,000. This is an amicable sale, made to re-transfer the property to the club, and to reduce the interest on the indebted ness. The Blooming Grove Park is perhaps the finest game preserve in the country. \$100,000 has been put into it since the inception of the project. The property comprises 12,000 acres of land, of which 700 acres are inclosed by a wire fence seven feet high, and a fine club house. where the best of fare is served at a low rate. The park is well stocked with large and small game, and is pro-

tected by special police. Easy of access, being situated ten miles from Lackawaxen station, on the New York. Eric and Western Railroad, and seven miles from Millville, on the Honesdale branch, Blooming Grove Park is a desirable property for a club of sportsmen. We understand that the Association propose to bid in the property for the fixed sum of \$24,000. Mr. Favette S. Giles has been most active in the work of establishing this preserve, and it is to his enthusiasm and activity that the formation of the Association was due. The trustees of the property are Messrs. Giles, Avery, Reed, Fearing, Maginnis, Robinson, Grimes and Mouzilley,

-The Forest and Stream is now published at 89 and 40 Park Row, Times building.

Two moose have been added to the Central Park Menagerie. They came from Halfax, Nova Scotia, and are worth visiting.

GAME PROTECTION.

ANOTHER GOOD SUGGESTION.

PHILADELPHIA, Pa., April 12th.

PHILADELPHIA, Pa., April 12th.

Editor Forest and Streem:—
"New Jersey," in his letter published in Forest and Streem:—
"New Jersey," in his letter published in Forest and Stream April 8th, says: "If many of the sportsmen of that State are in doubt whether or not the law has jurisdiction over the deeds of a propriet or on his own estate, as stated in your notes last week, it must be because they have very slight acquaintance with the laws."
Now I say, if any sportsman of that State is in doubt whether or not any proprietor of an estate has any regard "except contempt for any game law that ever was enacted" now exists, or is proposed for the future, let him get better acquainted with the above-mentioned proprietor, and his doubts will be cleared up on that score. It is a notorious fact that the majority of them believe that they have a constitutional right to kill and destroy all kinds of game birds and fish in season or out, provided they do not go off their own land to do it. Now what is the remedy? Certainly not more nor more stringent laws. They help make these game laws, they are all in favor of them; but "agin" carrying them out—that is, so far as applying them to their own actions. Those laws were made to govern the true sportsman.

It is seloin I go out into the State that I do not learn something that does not substantiate the above, and I am persuaded that the remedy is not in laws; but to educate the proprietors and their sons to the fact that it is much better for them and every one interested to protect the

the proprietors and their sons to the fact that it is much better for them and every one interested to protect the game birds in their nesting season and fish on their spawning beds. There has to be a revolution in sentiment on the part of the proprietors before the game laws will be respected, and I think it can be best done through the inedium of the country papers.

Let suitable articles appear from time to time, contributions of sportsmen who are known and respected by the land-owners, then the proprietor will become a respector of the game laws himself and will see that the true sportsman does the same on his premises, and we shall have the most efficient game wardens possible.

TEXAS DEER SHOOTING.

HIS has been an unfavorable spring for "gobbler

HIS has been an unfavorable spring for "gobbler" hunting. Too much cloudy and windy weather. I have taken only one little hunt of a week; got four shots with my Wesson, and bagged four old gobblers—beards from 9 to 124 inches—weights from 20 to 23 lbs.

We have plenty of nearly all kinds of game, from a snipe to a bear. The latter, especially, are numerous. Our friend, Capt. Highnower, has killed twenty-three bears this season, up to last accounts. They are quite fat this year from an abundant mast, and the Captain has killed some fine ones.

Deer are also plentiful here, but are fearfully butchered at all seasons, and will be decimated soon unless some measures are taken to stop it by legislative action, and I for one would like to call the attention of the sporting clubs all over this State to this subject, and urge them to action in trying to have good, wholesome and effective game laws established in this State, as in other States.

There was some "stagger" at a game law made and provided at the last sitting of the Legislature, but any schoolboy could see at a glance that not a line of it is worth the paper it is printed on.

The little game that yet remains in Texas is mostly confined to the borders of streams, and in the wooded districts, where in the latter the deer are killed by hundereds at all seasons of the year, for their hides alone in

dreds at all seasons of the year, for their hides alone in many instances. The law now stands, that "it shall be unlawful to kill (within certain months) any female deer knowingly?" Obes any man, with a tea-spoonful of brains, "knowingly?" Row what harm that one word in the law has done? Did he ever think how many thousands of helpless little fawns have been left to starve, because their nothers have been slain by careless and heartless persons, Since that miserable farrow was placed on the statute, I have never known hor many instances.

heard of a doe being killed in this county. All are bucks that are killed now. Oh, yes, all bucks—although their udders filled with milk are dissected and thrown in the bush, and their heads, feet and other evidences of sex are cut off and thrown aside in the woods—yet they are all "bucks".

sex are cut off and thrown aside in the woods—yet they are all "bucks."

I, for one, would appeal to every sportsman, naturalist, or other person, who has a spark of humanity in his heart, and who lives in this great State, to try and impress this matter upon their representatives in the Legislature, to frame some worthy method of protecting the game and fish while there is yet some little left. It seems to me that six months out of a year is long enough to hunt one variety of game. Let the closed season for deer' be, from Dec. 1st to the 18th June; for in those months are the breeding season, and the deer are poor, musky and unfit for food; and before the 16th of June, or 1st of July, the fawns are too young to care for themselves if their mothers are killed; and many other reasons I can give, it necessary. Sportsmen of Texas, think of it, selves if their mothers are kined; and many other reast I can give, if necessary. Sportsmen of Texas, think of and set your minds to work by the time the next Local lating convenue.

lature convenes.

Willis, Tex., April 20th.

A Caron in Goose Shooving.—One day, a few years ago, I started out for an all-day's squirrel hunt. I was armed with a Lamb rilde, carrying aball weighing seventy-eight to the pound, and with which I had done wonderful execution among game of all kind in the several years that I had owned it. The early morning was unusually pleasant for the season, and I anticipated a delightful still-hunt and a big bag. My objective point was what is known as Blue's Swamp, and it anticipated a delightful still-hunt and a big bag. My objective point was what is known as Blue's Swamp, and yr swamp running parallel with and a short distance from the river, and some five or six miles in length. Squirrels were always plentiful in this swamp, and on a pleasant day it was eav to bag a large number.

To my dismay, by the time I reached the swamp, the sun had disappeared and a cold northeast wind was blowing, and I found I was in for a regular "blue day." I did not turn back, however, but pushed along with very little prospect though of seeing anything to shoot. Toward noon I branched off to the river, where was an island some two miles in length. By means of a dug-out I reached the island, crossing it and coming to a beach on the banks of the main river, which was here some two bundred yards in width. Finding a convenient place at the edge of the water, I sat down and commenced eating my lunch. My attention was at once attracted to a large flow, and the plant of the proposite me, and almost two hundred yards away. Ah, how I wished I was no use to wish, so I finished my lunch and stooped for a flusk of water, and, just as I stooped, I heard the peculiar "swish" made by yeess in lighting upon the water, and pecping through the willows by prepared to fire, when my limited rest them in range, and so rest two invested of acceptable of the stand I saw two geess, probably the advance guard of another flock. Pushing my rifle through the willows I prepared to fire, when my linger was stayed from the

lighting upon the water, and pecping through the willows which lined the banks of the island I saw two geese, probably the advance guard of another flock. Pushing my rifle through the willows I prepared to fire, when my finger was stayed from the trigger by the thought that I might get them in range, and so get two instead of one. They had not yet begun to feed, when this thought occurred, and, knowing I could not be seen by them, I quietly rested my rifle on a point of the rock behind which I was hid and awaited their first move.

I had not long to await. They soon crossed, and I fired. There they lay—two beauties. The nearest one to me was some thirty-five feet away, and the second probably some five or six feet further. The river all along this side of the island, was covered with rocks of all shapes and sizes. There was no current, owing to the peculiar form of the island on this side, and this was a favorite leading place of both ducks and geese. Prothe peculiar form of the island on this side, and this was a favorite feeding place of both ducks and geese. Procuring a willow limb, as a sounding-pole to avoid holes, I waded out after the dead geese. They had probably not moved an inch since the ball struck them, but imagine my astonishment, on rounding the bend that had been my hiding place, to behold a third goose, not yet quite dead, struggling in the water nearly thirty feet away from either of the others. I had seen but two, and could sarreptly believe my ease, as the seen but two, and quite dead, strugging in the water nearly thirty residuary from either of the others. I had seen but two, and could scarcely believe my eyes now when I saw three. I had heard no other shot fired, else I might have thought this goose killed by some one else. But speculations as to its death were useless, so I at once made an examination. The first goose, the one nearest me when I fired, was shot through the head; the head, in fact, was torn to pieces by the ball. The second goose, five or six feet further away, was shot just at the junction of the neck with the body, the ball passing entirely through, making a large, ragged wound, causing instant death. Now, as I sat on the island, these two guess were in a line leading directly north, while the third goose was fully thirty feet away on a line a little south of west. Examining the third goose, I found the ball had shattered the butt of the left wing and had buried, itself in the body, there away on a line a little south of west. Examining the third goose, I found the ball had shattered the butt of the left wing and had buried itself in the body, there being but the one wound. Going back to where the second goose had been killed, I made a careful examination, and was at last rewarded by finding a large slate rock just reaching the surface of the water, and upon this rock was a small white spot, the imprint of my rifle ball. The surface of the rock toward the spot from which I fired was almost perpendicular, with a very slight inclination or twist to the southwest, being of just the peculiar shape to send the ball glancing in the direction it did, and which happened, very fortunately for me, to be in the direction of the third goose. But while I rejoiced at my fortune in getting three geese at one shot, and of not having to go home empty handed, as I had certainly calculated on doing, I was not really satisfied as to the cause of death of the third goose; nor did I become fully satisfied until I had taken the ball from the bady and weighed it, when I found it was indeed my own rifle ball.

Washington, Feb. 14th.

Washington, Feb. 14th.

Pennsylvania—Pittsburg, S. S., May 1st.—Our friends—H. Smalley and Charles Gaul, members of the South Side Gun Club—have just returned from "Seven-Mile Island" after a week's shoot, having bagged 21 ducks. They report ducks very scarce and wild, quait very scarce—the hard winter of 1878—9 has greatly diminished their numbers; but this winter has been very mild, and I earnestly hope there will be enough of them left, so that we may have a little quait-shooting this fall.

J. R.

Lenching with a Grizzly.—The following is a reminiscence of my lonely travel down the Missouri in the spring and summer of 1841: Some time during my captivity among the Indians in the mountains near the head waters of the Jefferson Fork. I had seen and secured a piece of an old life they had. This afterward proved of great value to me, for I could, by striking it with any hard stone, get sparks, and so secure a fire. I was given an old kind of a knife, which, although very poor and clumsy, was invaluable. After the fight I coscaped among the willows, and was, doubtless, supposed to have been killed, as I never was pursued, to my knowledge, and so I wandered like a frightened deer down the river, fleeing from every creature that looked dangerous. I secured from the scaffold sepulchre of an Indian a very good, long spear and a large apron which seemed to be made of tanned rattlesnake-skin, with a large pocket in it, the whole lined with finely tanned deer-skin, and in the pocket were some small shells and bones and other things, which led me to think it was the grave of an Indian doctor. Near the Upper Falls the buffalo were very plenty, and here I drove away some wolves from a buffalo calf they had just killed. I took the saddle and liver, and son found a good place under a large rocky cliff and built my fire, and was broiling the liver on a piece of flat stone, and had a piece of the loin on the end of myspear, holding it in the fire. Looking through the blaze I saw a large bear which had approached and was eating the rest of the meat, which I had left within some ten feet of the lien. I think he had not seen me. He noticed that bag or apron near the meat, and stretched out his nose and smelt of it, and seemed afraid of it, for he jumped on one side and moved away sideways, sharply eyeing it, and so went off. I never saw him again. All kinds of creatures seemed to be afraid of that rattlesnake apron or pouch, and I always kept it by me, and with hot ashes on one side and that rattlesnake-skin pouch on the other

THE LE ROY SHOT CO. BADGE.

ANENT THE CATS.—Lynu. Mass., April 26th.—Was glad to see your caution against the domestic cat as a game destroyer. This animal ought to be exterminated. All insectiverous birds ought to be protected and encouraged to breed in our gardens and near our dwellings as much as possible; and, as they have plenty of natural enemies, the cat can be well dispensed with.

There is a locality near here where the young quail are annually caught up by cats, and when the season comes in, there are but four or five birds where there ought to be forty. Last fall, a farmer back here in the country said his cat had caught a whole brood of young partridges, she bringing in one every day or two until they vero all gone, and that brood was known to have had twelve birds in it the first of the summer. "That cat ain't catching any this year." Snares are nowhere alongside of these pests. Many farmers have three or four that get their living in the woods all summer, and the amount of destruction to game birds must be improved by large in a senson.

the amount of destruction to game birds must be immensely large in a season.

When my dog points a cut in the woods, I always make it a point to scoop in that feiline, if I can, regardless of her color or politics, and shall continue to do so as long as I can stand behind four drachms of powder.

As a cat is said to have nine lives, a half-dozen thrown out of a Bogardus trap would give a fellow some good practice once in a while during the close season; and a man that could shoot ten straight, or shoot them so they would lie straight, I should call a good shot and a public benefactor.

Crow BLUE. CROW BLUE benefactor.

NEW YORK—Plattsburg, April 25th.—I shot four snipe on the 22d. This is the first bag of snipe that has been made here this season.

F. B. J.

NEW YORK,-Rochester, April 28th.-Snipe shooting is

at its height with us of this region, and the game has not been so abundant in the spring for many years. Parties drive or take the cars out to the various known resorts of the birds every day, and few return empty-handed. I know that several good bags have been made, and have heard of almost fabulous numbers of the long bills falling to the guns of peculiarly Jucky shooters. A dealer in game told me this morning that a man yesterday wanted to sell him half a bushel basket full of snipe. While out shooting this week with a friend, after snipe, we came across some young wild pigeons on the railroad track feeding on grain dropped from the cars. Quail and ruffed grouse are often seen on the Central tracks picking up corn, wheat, etc.

There is a good deal of ball shooting carried on here by clubs and in private matches. It answers the purpose of testing comparative skill quite as well as pigeon-shooting, and is free from objections that may be urged against the latter. In time ball shooting will nearly supersed pigeon shooting.

the latter. In ti pigeon shooting,

pigeon shooting.

KANSAS—Abilene, April 28th.—Our usual spring flight of plover commenced about April 4th, and they have been, and are now, very plenty, and large bags have been made—Stevens and Wemyes killing 76 in three hours' shooting. Ducks have been more than usually plenty. Some few geose; but no brant on the wheat, this spring. Three years ago I noticed the first robin, now they are plenty.

DIRIGO.

SHOOTING MATCHES.

MAINE-Topham, April 30th.-Annual shoot of the Riverside Shooting Club. A very strong wind blowing. The following is

THE WASHINGTON CLUB.— Washington, D. C., May 2d.—A number of prominent business men met at the residence of Dr. J.
W. Yan Arum on last Wednesshy evening, to take into consideration the organization of a shooting with. After interchanging opinions a constitution and by-laws were adopted. The toltowing officers were elected: President, Dr. J. W. Van Arum; Vice-President, C.R. Dufour; Secretary, C. M. Oxfori, Treasurer, William Holmend; Capitain, George A. Bentley; Scorer, W. E. Buford. The club have selected shooting evonus at Holmend; William Holmeat; Capitali, George A. Bentley; Scoret, W. E. Bafrord. The cith have selected shooting grounds at Holmead, and are having them placed in line condition. It is the intention of the cith to inaugurate a fournament shooting season during the summer, when it is expected that crack shots from the best clubs in the country will participate. The cith meets twice a week for practice.

ERB-BOGARDUS MATCH.—St Lovis, Mo., May 1st.—Bogardus told ERB-BOGAIDDES MATCH.—SI LOVIS, Min., Mary 184.—Bogardus told une he never shot before such a crowd as was present. No narangements had been made to keep the crowd within bounds, and before the list ten blids were shot, the spectators formed a letter Y from the shooters, and several birds, flying to left and right, were shot at the imminent peril of the crowd. Once Bogardus refused to shoot at a bird Bying toward the crowd, and several times he and Erb intentionally gave them a peppering. It was the intention to shoot at tume birds; but the party who was to have secured the birds, failed to do if, though there were hundreds caught, and easily to be had; and wild once were used. They were not a good lot. Erb missed several of his casiest birds, and struck soveral of them hard with both barrels—the reathers and struck several of them hard with both barrels-the feathers and struck several of them hard with both barrels—the feathers slying at each shot—but he was using miscrably poor powder, and early in the shoot Bozardus told him that he was beaten by it. Old man Ech, as he cleaned the gun after each shot, said, "Pred deserves to be heaten for using such powder." As you see by the result, the match was close, and the shooting good. At its close, Ech told Bozardus he wanted some more of it, and no doubt another match will be arranged soon. The gate money, which was divided between the contestants, pays them hand-aomely for their trouble. Notwithstanding the result of this match, Leonsider Eigh the hetries shoot; but he does not struck the experience. I consider Eth the better shot; but he does not stand the excitement of the crowd as well as the old champion. I predict that Bogardus will lower his colors to him within a year. The

reather was delightful-wind just a little from the south, the

weather was delightful—wind just a little from the south, the shooters faring north.

The Republican says: "At the end of the first half hundred, the secre stood; Bogardos, 43; Ech, 10. Exh picked up one in the next ten, and when both had 70 birds, the score was \$0\$ to \$8\$ in Favor of Bogardos, Between his 70th and 80th birds Exh has four, however, and thus lost his chance, though be killed inheteen out of his bart wenty, the secre standing at the end 80 at 80; in fayor of Bogardos. Between the first has the second section of the sate ways, the second same the case of a 80; in fayor of Bogardos. The feature of the match was the steadiness of gardus' shooting, and the alternate nervous and brillant work Bogardus' shooting, and the atternate nervous and brillant work of Keb. Twee the flatter nost three birds in succession. He lost fly birds in the 5. cm, three in the fourth and four in the eighth these leaving his record full of weak spots, which are not compensated for by the long string of 'Kilis' in the center and at the cut. Bogardus, on the other hand, never missed two consecutives. con. nogarous, on the other anno, never insect two consecutive birds, and rarely lost an easy one, which is more than could be said for Eth. But the most noticeable feature in comparing the two scores is the relative efficiency of the first barrel in each. Though Bogardus killed only three more birds than Eth in all, be secured ten more with the first barrel. Bogardus used the second barrel successfully 21 times, Erb 28 times in their totals of 86 and

Strespectively. In the appended score the star is used to indicate birds killed with the second barrel."

Match for \$160 a side, 100 single birds, 30 yards rise, from ground traps, 100 yards boundaries, use of both barrels allowed.

Roston, Man 1st .- The unpleasant weather conditions prevented Instant, August.—The impressant weather conductors prevented a very large attendance at the Walnut Hill Hange to-day, to participate in the regular "Everybody's" match. A gale of wind from the northwest blow across the range, and reudered it extremely difficult for the few marksinen, who had the hardihood to unpete in the face of this disadvantage, to even to get on to the larget. There were sixty-seven entries in the match, and appended are fifteen of the bost scores made at 200 yards: -

prize smooting of the Kew Tork Scheduck corps, under commanies of Captain George Aery. Shooting commences on both days at 9 o'clock A.M.; closes the first day at 7 o'clock P.M.; the second day at 5 P.M. Distribution of prizes the same evening at the shooting bouse on the grounds.

Syracuse, April 27th.—At a meeting of the Sixth Division Rifle

Syracuse, April 37th.—At a meeting of the Sixth Division Rifle Association, Syracuse, this evening, the following directors were elected for the ensuing year: Major-Geo. D. P. Wood, Cols. James Manning, J. W. Yale and D. H. Bruce; Lieut-Cols, George M. Crouse and W. A. Butler, Major M. Auer, Capts, G. W. Ed-wards, Paul Birchneyer, T. M. Rarber, W. B. Randall and William Duncan, Lieuts, Charles Minard and R. Griffin, Messrs, Charles E. Communical E. A. Desirs. Crouse and F. A. Banta.

NEW YORK AMATEUR RIFLE CLUB.-At a special meeting of New YORK AMATEUR HITLE LUTS—At a special meeting of this ciubit was decided to accept the invitation of the N. It. A., and to pay the expenses of a representative of the club on the Jush Team, as far as might be required by the N. It. A., not to ex-ceed \$350, said amount to be raised by subscription. It was also decided to open competitions for the above place on the team, which will be as follows :-

To be held at Creedmoor, on Friday and Saturday, May 7th and th, 1880, at 11 o'clock, A.M., each day. Open to members of the

Ranges, 800, 900, and 1,000 yards. 15 shots at each distance, each

Ranges, 800, 900, and 1,000 yards. Is snots at each distance, each day. That competitor making the highest aggregate score in the two competitions will be selected by the Amateur Rifle Clab as list representative, subject to the conditions of the N. R. A. Any competitor shooting in the N. R. A. Remington Shot-Gun Match, which takes place on Saturday, May 3th, 1890, may have his score in that match counted as one competition, should be so

ers. Keene, Wingate and Alford were appointed to solicit scriptions to the fund.

MILITARY 28. SWISS RIFLES. Mr. Frank J. Donaldson, the Sec-MILITARY cs. Swiss RIFLES. Mr. Frank J. Donadson, the Sec-retary of the N. R. A., is preparing the terms of a competition which shall bring the heavy Swiss riles to Creedmoor, in compe-tition with the ordinary ten-pound riles. The runes of the N. R. A. very properly har out these ponderous pieces of ordance, and encourage the use of practicable field weapons; but there is a desire on the part of the Schuetzen Club shooters to meet the crack off-hand men at Creedmoor for a fair, full test of the riffes. This Mr. Donaldson proposes to bring about with his match, and the Board of Directors have asked him to draw up his terms for

NEW JERSEY-Brinton, May 1st .- The season of the New Jersey NEW JERSEL-Philmon, and Re.—Lie season of the Awe elsely State Rills Association was opened to-day on Brinton Range with the first of twenty competitions for Sharps military rifles, open to members of the association and members of the National Guard of New Jorsey. It was shot at 200 yards distance, with military rifles, and was won by Mr. I. L. Paulding, with a score of 42 out of ble 50 points:--

Washington, D. C., May 1st.—The third spring match at 800, 800, 800 and 1,000 yards was shot at Bennings to-day by the Columbia Ridle Association, under trying conditions as to light and wind, and Association, under trying conditions as to fight and wind, and scores, which to the uninitiated should have been high in the pleasant May weather, were pulled down below the averages, to the chagrin of the six marksmen who entered for the contest. The west wind varied three points or more in both direction and force, and at the first two stages required much judgment to counteract its vagaries, while thin clouds, deepening into a gray Counteract is vagaries, while tun coons, deepening mo a gray sunset, according field by falling temperature, made clevations uncertain. Althoughi'e he corporal's guard of competiors was made up of redoubtable "cracks" like Col. Burnside, Mr. Lauritzen and Dr. Scott, and promising beginners like Walter Scott and Mr. Adee, yet all were more or less baffled by the shifting elements, the Colonel's old-timeskill as a bad-weather shot giving him the the Colonic is offermessin as a waterweather storgy mig in the least unfortunate outcome, as shown by the record printed below. His clean score at 800 yards deserves the highest praise, as won in the teeth of most perplexing conditions of mirage and whild. At 900 yards Dr. Scottshot in good form, and came out best with 69 to his credit, including a string of eight white owls; while at the longest distance Mr. Adee's luckily steady elevations gave him the advantage—his fifteen shots, without change of vernier, ranging within eighteen inches of vertical deflection, giving him a creditable 60 and the second prize on the aggregate scores. The leading shot-for-shot tallies were as follows:-

| Col. J. O. P. Burnside | 8005 9003 1,0005 | 4. | 4 5 | 5 | 5 | 5 3 | 4 | 5 | 5 | 5 | 5 | 5 4-67 > 20 | 9 |

Offio-Ashtabula.—Spring tournament of the Ashtabula County Rifle Club. The attendance of sportsmen from abroad was very good and among them were some very fine shots. No score was kept the first day. On the two last days some excellent shooting was done. The three best counts of those days gave a total of 377, and 372 for 100 shots, and 325 for 90 shots, out of a possible 500 for 100 shots.

NATIONAL GUARD PRACTICE, 1880.—Gen. A. C. Barnes, General Inspector of Rifle Practice, S. N. Y., has prepared his orders for the instruction of the National Guard in rifle practice during the coming season. It will be conducted according to Upton's Tactics and Wingate's Manual, but wherever there is a conflict between the two works, the Tactics will govern. Every enlisted man of the infantry and cavalry, and of the artillery, when the latter is armed with carbines, will be required to practice on the range at least once during the season. The days for practice will be designated by the division commanders, subject to the following provisions: I. Shooting in each division will begin with marksmen's day, which will be devoted to practice for the marksmen's badge. Only those who won the trophy last year will be permitted to shoot for the decoration on that day, and those who win it again will not be required to practice at the other ranges. Falling to win the trophy, the competitors must take coming season. It will be conducted according to Upton's Tacwho win it again will not be required to practice at the other ranges. Failing to win the trophy, the competitors must take their place in the third class fand begin again. 2. Commandants of subdivisions will parade their respective commands, except the marksmen, at the range for practice in the third and second classes, on days specified by the division commander. They are admonished, however, not to convey more men to the range at agmonished, however, not to come more more in the first and commonded for. File and volley fitting by squads, platoons and companies will follow class-shoot-ing on these days. 3. Those who are absent on the first general practice day will be ordered out on a second occasion. Those who have qualified in the scond class on the first general practice. the day, may, if they choose, shoot for the marksmen's badges on that day, and those in the third class may shoot for places in the second class at the same time. File and volley firing will also be practiced. Marksmen of 1876, who are unable to be present at the first general practice day in approved matches wherein the conditions are precisely similar, but they must furnish their own the urst general practice day in approved matches wherein the conditions are precisely similar, but they must furnish their own transportation and aumunition. Every man must shoot with the weapon be carries to the range, unless it is subsequently con-demne. The Inspector of Ritle Practice as being defective. o several classes must stand on the first qualify-

ing score made. No officer or man will be permitted to fire more than 10 shots at the same distance in a single day. One company officer at least from each company on duty must be present on each practice day, and when two or more companies are ordered out, a field officer m ust be present.

Australian Riflemen.-The rifle organizations of Sidney and AUSTIALLAN RIFLEMEN.—The rifle organizations of Sidney and Melbourne have now a new associate in the South Australian National Rifle Association, of Adelaide, the first annual report of which is at hand. The body was formed under the Rifle Companies' Act of 1878, in Pebruary, 1878, and during the past year organized soveral matches. The first annual prize meeting was held at the Granville Langes, Semaphors, Oct. 6th-10th last. The ned at the Granville Hanges, Semaphore, Oct. 6th-10th last. The targets and marking are quite unlike those in use at Creedmon and at Wimbledon, and without any good reasons, and the rules are very strict to marksmen. There were on the meeting programme a company match with seven entries; a long-range match with forty-seven, and a short-range match with sixty com-petitors, a "Merchants" match at 400 and 500 yards, a contest for the S. A. N. R. A. championship, over six ranges; the Nursery Stakes and the Consolidated Stakes. The local volunteer forces have become interested in the Association, which bids fair to become a power in the rifle shooting world.

LONDON, May 1st.-Bell's Life says: "John William Oakden, nine LONDON, May ist.—Bell's Life says: "John william Oakdon, nire-teen years of age, the champion 500 yards shot of Bagland, chal-lenges any man in the world to shoot forty shots, distance 500 yards, at a target four feet in diameter, with an eight inch buils-eye; or he will give eight points out of eighty shots for £330 a side and a hundred guinea challenge cup. He will give or take £50 for expenses to any part of the world, Bell's Life to hold the stakes and appoint a referee."

VACHTING NEWS.

GAINING STEADILY .- That something more than sand-bag rac ing is to be got out of a small boat is becoming more generally recognized. The Lizzie Warner, Haverhill Y. C., has been given 6in. more top-side, an over-hanging stern and a cabin, making quite a cruiser out of her and a safer boat than before.

HAVERBILL YACHT CLUB.—Com. Fairfield Harris and other gentlemon have offered a cup to be sailed for by yachts of Essex County, the cup to become property if retained sixty days against all comers upon six days notice. The first match for the cup is set down for June 5th.

WHERE IS THE CYGNET.-Mr. Shepard's sloop, Cygnet, recently cleared for Boston with a crew of two hands. She has how been out over a fortnight and has not been heard from. Probably awaiting fair weather in some small harbor.

SAN FRANCISCO YACHT CLUB.—In accord with the invitations issued, the fleet of this club opened the season with a cruise to Saucelito, April 24th. An informal hop was given at the club house. It has recently been stated that yachts can be built much cheaper in San Francisco than in the East. This is open to queen taking the finish into consideration. The yawl is still the popular rig on the Pacific.

NEW STEAM YACHT.-Reancy and Malster, of Baltimore, are making good headway with the large steam-yacht for Mr. Leon Say. She is 200rt, length over all, 31ft, 6in, heam, and 20ft, depth of hold. Built of wood, the frame of the best Virginia white oak, and the plankings and ceilings of Georgia yellow pine. All the fastenings, from one foot above deep load line to keel will be of copper, and the others of galvanized iron. Sheathing of hardrolled copper, She will be fitted with a steam steering gear in the pliet-house, and a serew steering gear aft, with telegraphic communication from the latter to the forme. There will be a steam windless and a steam which amidships for hoisting sail and warpings. She will be full bark rigged and carry six boats, one of which will be a steam-haunch 28ft. long. Abaft the machinery will be the private saloon, cabin and state-comes, furnished in elegant style and connected with bath and tollet-rooms. From this saloon there will be a passageway forward to the dining-saloon. There will be four water-tight builtheads, and the one between the machinery and saloon will have heavy felt between the double linings to deaden the noise of the machinery. Coal-bunkers (sarry 39) tons. Water-lanks, with a capacity of 10,000 gailons. the fastenings, from one foot above deep load line to keel will be

and a condenser for making fresh water, will also be provided for and acondenser for making fresh water, will also ne provided for in the hold. The yacht will be propelled by compound engines, having 28 and 50in, cylinders by 33in, stroke. The engines will be supplied with independent air-circulating and feed-pumps, with boiler of 80 pounds pressure. The engines are to turn up to 80. The propeller will be of brass, with blades bolted to hub, and 13ft, dame, with a pitch of 20ft. At full speed twenty tons of coal will be consumed daily. The vessel will be completed by the 1st

New Engines.—Clute Bros. & Co., of Schenectady, are placing the engines in the steam-yacht built by Piepgrass, of Greenpoint, for Mr. Ed. Balback, of Newark. The yacht is 80ft. long, 13ft. for Mr. Cal. Balback, of Acwark. The yacht is 80ft. long, 13ft. beam, and 4ft. §in. deep. Compound condensing engines, cylinders II and 8in. diam. by 10in. stroke. Return tubular boiler 5ft. Sin. diam. and 6ft. 3in. long. Expected speed 14 knots. The same parties are supplying an inclined engine for Mr. Vanderbilt's sidewheel yacht, buildime at the same yard. Vertical boiler 52in. diam. and 71i. high. Cylinder 18x12in. Length of hull 82ft. beam 12ft. depth 3ft. 9in. She is intended for the shallow waters of Great Scath Davi. 4

depth 3ft. 9in. She is intended for the shallow waters of Great South Bay, L. I.

BROOKLIN YACHT CLUB.—Mr. D. S. Hines is having a new steam-yacht built by Sam. Pine, of Greenpoint, engines by F. C. & A. E. Rowland, of New Haven. Longth 7ft. 8in. on w. 1., 8ft. over all; beam, 15ft. hold, 6ft., draft, 4ft. 6in. Cylinders, 10x10, working up to 200 revolutions with 125 pounds steam. Propeller, 6ft. diam., 8ft. pitch. She will be fitted up with the usual number of saloons and conveniences, the joiner-work by Vandeveer.

Norme Park Rosens.—On Tuesday, April 2fth. at 1.30 F.M., Mr.

Notes From Boston.—On Tuesday, April 27th, at 1.30 p.M., Mr. Tyler's shooner yacht Caroline slid off the ways among the cheers of an admiring crowd. The vessel took water with a heavy splash, the ways being rather short and steen for an casy entrance. This little ressel is the best of her type built in these waters, and, according to your correspondent's ideas, will be a powerful vessel. I am sorry that Mr. T. could not be induced to righer cutter, for I am inclined to think that two sticks will decidedly detract from her beauty. There are at City Point quite a number of keel boats building, among them Mr. Burgess' cutter Scorpion, and a cutter of 25ft. w.l., which is a fine type of the deep model. A healthy deep-hoat atmosphere pervades the yachting circles here in Boston, and let us hope it will continue. yachting circles here in Boston, and let us hope it will continue. The Sunday Herald made a slip-up, stating that the schooner Tempest was once owned by Mr. William Little, of the Brenda, whereas it should have said Mr. Lee, as it is a well-known fact that these vessels were great rivals at one time, being built by Mr. Harrington, of Bath, and both baving the same port of anchorage during the summer. The Brenda invariably got the best of the smaller vessel, which, by the way, was not 70ft, long, as the Herald says, but 60 or thereabouts. The Tempest is an able sca-both, but has not been seen around Boston for some time. I hear the Brenda is having housing topmasts got out, as are many of the boats in these waters, which is a good thine, and shows of the boats in these waters, which is a good thing, and shows that yachting mon are having their eyes opened to the fact that top humper is best out of the way at times. Mr. J. M. Sears, of the Trontina. Both vessels will make Mt. Desert their handquarters this linted. Both vessels will make Mt. Desert their handquarters this summer. THE GLEAM,-This steam yacht, recently launched from Her-

reshoff's yard at Bristo), has made a preliminary trial. Everything worked to satisfaction. The boiler made steam readily with the dampers partally closed, and the engines were worked up to 184 turns. Next trial she will be run up to her maximum speed.

COMPROMISE CUTTERS.—At least a score of yachts in this visinity will come out this season with a "double head rig."

Another Cure Effected.—Our contemporary, the Spirit of the Times, has the following in a recent date:—"Its hard to tell, however, which is the mostsenseless, the carrying of 11 tons of sandbags on the weather gunwale, as the Dolo would have to do, or the bags on the weather guttavia, agine Dono would have to no, or the dragging of "3 tons of lead or more," in the keel. It would seem that a compromise between the two styles of model—the English and the American—was something just now much to be desired.' Exactly, and it affords us pleasure to add so excellent a journal to The list of ourcel—cured from the hallucination that holling can sail unless spread on top the water. One by one our contempo-raries are tacking ship and laying a course by our wake. Moderate beats, good depth and draft, low ballast, song rigs and flush decks—that is the compromise two water, and the compromise that decks—that is the compromise we want, and the compromise that will produce the best yachts for all purposes, and give the most for the money. As to small, open boats, the sand-bag caricatures are no match for the catamaran, in any respect. The latter should displace the dangerous clam shells altogether, and it is a matter of wonder that this has not been done long ago. The catamarans are faster, drive, less expensive to run, infinitely safer, and of lighter draft. We pride ourselves as a nation upon being proreserve, but greater conservation in dropping an ancient and extravagant vagary for a vast and palpable improvement, could hardly be cited. The life insurance companies ought to interest themselves in bohalf of the extamaran. They are a perfect gosend to open boat sailors, and yet they are not in popular demand. send to open Journal salors, and yet they are not in popular demand. They combine racing qualities and cruising capacity to a much higher degree than the Nettles, Meteo.s, Browns, Dodos, and their ilk, which take a mountain of sand, an arre of canvas, and a frigate's crew in bathing duds, to get out of their own way alongside of a Tarantella or a Gilpin.

THE CRUSADER.

THE trial of the new schooner Crusader, J. Roger Maxwell, Esq., A. Y. C., was an event looked forward to with much interest in the yachting world. A good deal of nonsense had been written concerning the new craft, one cribusiast of a contrary written concerning the new craft, one culturiant of a contrary united oven going so far as to counsel filling in her bottom solid, thereby raising the ballast some 12ln, above its present position, and we believe it was the same oracle who found fault with her dead wood because it was too heavy, when, as a matter of fact, its siding size is rather less than usual. But, whatever may have been the opinions of such worthies, Numm, the huilder-or "Johnny," as he is more familiarly known—has turned out a sound and handsome piece of work on the lines supplied by the owner, of which Mr. Maxwell may justly be proud. The Crusader is something of a departure from the old time standard which is something of a departure from the old time standard which twiter, of which advantages may justly be proud. The Crissiner is something of a departure from the old time standard, which has about been ridden to death, and we welcome the change, for in her we see the birth of an abler style of center-hopard vessed than hitherto the custom. She is, in short, an approximation to the pilot beats in general dimensions, though in the matter of freebound she certainty is far ahead of them. She is Ni(t over all, 1887 the owners they gift the sheaf of them. Fig. 3in. on water-line, 2ff. 7in. extreme beam, with about 20ff. Sin. 3in the water-line, 2ff. 3in. deep, and carries, at present trim, 30 tons of linds lead, on a draft of a little over fft. Poremast ffft, mainmast Taft., bowsprit-outboard 35ft, mainboom 58ft, main-section 10 tons of line and 10 tons of 30 tons of inside lead, on a draft of a little over 7ft. Foremast IIII, mainmant 3ft., bowsprit-outboard 3ft, mainboom 58ft, maingaff 3flft. At a future date we hope to publish the lines and full details of the yncht, and at present we will limit our attention to her first day's sailing hast Saturday. At 3.7.M. the lines were cast off, and a tug took the schoener into clear water. There were on board, besittes the owner and builder, a number of gentlemen is terested in her performance, including Com. Latham, Fish, and ex-Com. Thayer, of the A. Y. C.; Yies-Coms. Hathaway, N. B. Y. C.; Messrs, C. S. Lee, Lawton, Max. Wrigley, L. C. Maxwell, and thers, including representatives from the Forest Ann Stream.

others, including representatives from the Forness Ann Syrram, and World.

The wind was blowing stiff from west southwest, the guists whistling through the rigging, which produced visions of wet decks and sing canvas. The minest horsetayast and jib were put on her, and the hard blasts could not make her "drink water" to leeward. Hev stiffeness was a matter of favorable comment, and after a few boards, the foresail was set and the schooner sailed out the Narrows with a rap full. Even the worst of the squalls could do no more than just fetch her "deck to," and there she seemed hang. It would have taken a young gale to send her over any forther, for she began to feel her soling is the easy manner in which she parts the water forward and the rest she leaves it in from abatt the quarters. Even when down to the souppers ner in which she parts the water forward and the rest she leaves the from aniat the quarters. Even when down to the scuppers there was no sign of a break under her lee bow, nor along her side. She groes through the water like a steamboat, and there is actually no more lecommotion to leeward than to windward, barring the merest surface agitation. The Cruadler will have to be pushed very hard indeed if she is ever to carry a "hone in her be pushed very hard indeed if she is ever to carry a "hone in her teeth." Certainly it must be granted that her entrance is about perfect. It is 0.8 of the length, and her arears forward correspond to the wave line ordinates; facts which offer a solution of heralmost unequaled excellence in this respect. Not even the America goes through with less fuss. And what has been said about her entrance applies to the run, for the Criteader drags no quarter wave, no stern wave, does not drop by the stern or bore by the head. She is one of the cleanest-sailing vessels that have come under our observation. Add to this the fact that she carries a large spread, and carries it in a stillish wind without flinching, that the more is blows the faster she woes, showing no burving. that the more it blows the faster she goes, showing no burying procliving, lively and sensitive to every puff, well balanced, very quick in stays, easy as an old shoe in the moderate swell met with on Saturday, and the opinion may well be hazarded that she wil be a teaser. With her owner at the helm, and some of the Peer. less' old corinthians tailing on to the gear, Crusader will be a hard one to beat, and the craft that gets away with her will be a flyer ladeed. If the new schooner fulfalls our expectations her success will go far toward the introduction of a healthy yacht and healthy yachting in New York waters, and no little credit must be awarded to her owner for the step he has taken in the right direc-

AN EASTERN ASSOCIATION.

Editor Forest and Stream :

THE call for the formation of the Massachusetts Yachting Association was issued by the D. Y. C. mainly to settle the question of measurement. The system adopted is simply that in use by the D. Y. C., and may be the best, but for my part I do not believe that it is. My reason for saving so is this: There are two yachis in this wijelinity that often sail together in regatts, one of which is litt. long and 10ft, beam, the other 23ft. long and less than 9ft, beam. The result of the context is invariably the same—the longer boat getting in ahead, and being figured out of the prize by the time allowance now in vogue, with the simple facto of length considered; the shorter boat not being taxed for the foot of exira beam, which gives her so much extra sall-carrying power. Yet if they should sail under the rules of the Salen Bay Y. C. they would sail on even terms. Does not this seem to be

I think the plan proposed by myself, and adopted at several regattas I was connected with in the management, some seven years ago, is preferable to this. It was as follows: Starting from the stem at the water line, carry the tape around along the water line to the stern in line with the stem. The only person who made the slightest complaint was the owner of a very wide sloop, which had been a very profitable craft in taking prizes, owing to the simple length measurement making her so much shorter than most of the yachts of her class, although more powerful, but by the "girth" method she was much more fairly estimated. I do not wish to say that this is the correct system, but is, in my nind, preferable to a simple length measurement. The Massachusetts Association has, therefore, grieviously failed, and disappointed many in this respect.

At the meeting for the organization of the Eastern slivision of the N. Y. A. five were clubs represented by delegates having au-I think the plan proposed by myself, and adopted at several re

At the meeting for the organization of the Eastern auvision of the N. Y. A. five were clubs represented by delegates having au-thority from their respective clubs, and at the next parhaps two more clubs will be represented, these clubs not having felt au-thorized to send representatives unless they were appointed at a regular meeting.

The Washington Villago Y. C. is a new club organized a year regarder they respent times in quitie a prosperson gandition. At

are, and at the present time is in quite a prosperous condition. A their last meeting they voted in some twenty now mombers, drawn from the Dorchester and South Boston clubs. They intend to be vory rigid in their choice, and to admit none but those who would make desirable members. Salem. April 26th.

CANOES AND THE CANOE CONGRESS,

I am pleased to learn from Commodore Chase's letter, which I am pleased to learn from Commodore Chase's letter, which appeared in a recent issue, that the promoters of the Canoe Congress, to be held at Caldwell next August, have become charitably disposed, and made arrangements to take in Cauadians as members and having all the rights and privileges of their American cousins. Think this is a step in the right direction, for canoe padding and canoe building are nothing new in Canada: and I will here suggest to my brother canoeists in the Dominion that we turn out in full force next August.

As for canoe cruising with decked canoes in large open water, I have seen very little of it in this country. In our inland lakes and streams we feet tolerably safe in an open canoe, and for that

and streams we feel tolerably safe in an open canos, and for that are strong or the control seem and the control seem although saling is industed in the control seem and the control seem and the control seem and the control seem as birch-bark of the North American Indian as is conformable with brea-park of the worth American Indian as is conformation with the great requisites—speed and safety. I trust this subject, what constitutes a cauce, will be taken up and discussed at the coming congress. I am aware you have builders of fine cances in the United States, but I think the Canadian builders are prepared to offer strong opposition in that line. For myself, I should like to fleast the appresse square from the work best builders of building of buildings of fine. soe at the congress canoes from the very best builders of both Sociat the congress cances from the very best builders of both countries, and I would suggest that the committee baying charge of the call, shall allow Forest AND STREAM to donate a prize for the best cance exhibited at the congress. I intend to do what I can to induce the following builders to send a cance each; Stephenion & English, of Peterbore; Herald, of Riec Lake, and Gordon, of Lakefield, Nothing interests an enthusiastic cancelst more

than a fine cance, and the meeting must be made interesting in every way possible

to my way possible.

In describing how a cance should be propolled, the commodores say that the padolle or sail only may be used. Although Mr. Bishop used ears and outriggers on his paper cance, Marke Thereed, during his 2,500 mile voyage from the Gulf of St. Lawrence to the great southern sea, they were only used to break the monotony of constant paddling, and to bring futo action sets of muscles that were not used in paddlidg. Mr. Bishop scouts the idea of using oars as a means of propelling the cance, except in extreme cases, where long journeys are taken.

Commodore Chase very correctly remarks that in Canada the single blade paddle is almost entirely used, and these are made of ash, maple, and sometimes of coder. Light in weight, yet sufficient strength, are the requisites for a man that paddles ten or twelve hours a day C A Post

Guelph, Canada, April 13th.

A TEN DAYS' CRUISE IN '79.

THE next day, Tuesday, broke fine, clear and warm, without a breath of wind, and if we had entertained any idea of leaving, we should have had to have given it up. As the day proreaving, we should nave had to mave given true. As the day progressed the heat made itself felt, and with our awnings spread fore and aft we prepared for a "loaf." Nothing is easier than this aboard a yacht, provided the "loafer" has no nervous disease—a thing not common in the species—and can do absolutely nothing, and enjoy himself. The "capitain" and "Eben" scated on the starboard side of the cockpit, carried on's desultory game of poker, for half dollars the game, to the buge delight of numerous power, for his wonths the game, to the nulge tengine or influence urchins on the wharf close by. Some one of an uneasy turn of mind proposed that we should visit Goss & Sawyer's ship-yard, so having put off for a time the much-loved pijamahs, the "Cap." Eben" left their game, and joined the crowd.

All over the yard we went, from steam box to nearly finished vesel, and many interesting things we saw. This yard is said to be one of the finest in the country, and it undoubtedly has every appliance for turning out vessels at short notice that ingentify could suggest. The inside finish of the coasting vessels caused us no little surprise, as did also that of a steam serew tender for a no indices in price and dash of a steam series tender to a whaling fleet. Maple and mahogany panels, with rich plush seats formed a yacht-like cabin, which was in good taste, and showed that the coaster and whaler have their comforts as well as the yachtsman. Enormous timbers from the bending machine were being put in almost as soft and pliable as molasses candy, but soon Defing put in timost as sort and phantes monasses candy, our soon to harden, and take heavy blows from many a good sea, some to succumb to their force, others to last out year after year? Ill burned for the iron that is in them. Such is the gratitude of man that after the good old vessel has carried blin and his over many a wide stretch of water, through many a blow, and has, perhaps brought him his fortune, that he makes a funeral pile out of it and rakes what he can out of the ashes.

As it grew very warm toward noon, we wandered back to the yacht, and once more donned the light and airy costume of the morning. Some mortal suggested that we should take a bath, morning. Some mornin suggested that we should take natus, and before the words were fairly out of his mouth two of us were over the side, and paddling round in the shadow of the yacht. The water was delicious, and it was not long before all hands were disporting themselves round the yacht like so many tame porpoises.

There was some talk of going over the town in the after but the town is not excessively interesting or exciting. It is the surroundings which impress one with their beauty. The ship yards are unsurpassed, but otherwise Bath is like any other East-

Later in the afternoon, however, "Gasket" and "Ehen" bired Later in the alternoon, however, "Gastet" and "Enen" here a trap, and went off on a jaunt through the city's principal streets. "Sticy" and the "Infant" betook themselves to the port both and a sail on the river, while the "Captain" smoked, read and slept on board in solitary grandeur. All turned up in time for dinner with their labitual punctuality, and it was unanimously decided that we do" the town by raslight, as we were to leave the next morning "do" the town by gastight, as we were to leave the next morning.
D. V. We found the tramp ashore rather slow, however, and so
set out again toward the yacht with pleasure. On the way down
we listened to the "Bath band," which was rehearsing, and were
regaled with the latest popular music. The night was fine and
clear, but the cabin glass threatmend wet and bad weather, much orear, not the compages interaction were an east weather; man, for our disgust, as we wanted to sal the next day without fail. We were doomed to disappointment, as the wind next morning was heavy from the south-southwest, bringing with it fog and rain. It was a head wind to go down the river, and though we rain. It was a head wind to go down the river, and though we sent word for a tug, none approached. This was quite as well, perhaps, as we still pride ourselves on never having had to use steam since the yacht was built. The gusts tore up the river in heavy bursts, and the fog and rain shut us in like a wall, so that we could not see the opposite bank of the river. Well, there we

could not see the opposite bank of the river. Well, there we were, so we had to make the best of a had bargain. Reading, smoking and card-playing were the "divarshuns" left us, and to these we turned for consolution. The "Captain," believing in detaching oneself from unpleasant surroundings by the aid of one's inner consciousness, lit a cigar, took down "The Voyage of the Subbeam," and curled up in a corner on the starboard side. This seemed to strike the crowd as a good idea, and of them immediately followed it. The others were scated at two of them immediately followed it. The objects cauches were eased at the table, engaged in some sort of incipient gambling, for there is nothing that a man won't do—even if his principles are of a high order—if he should happen to become storm-bound. This we discovered in "it, on our way home from a two weeks' cruise, which was extended to three weeks when we were fog-bound as which was extended to three weeks when we were log-cound at Scal Harbor, and Hockland more than ten miles away. A siron fog-horn drove us almost wild, and we were reduced to shooting crows and trying to shoot a lamb which the owner offered us at a discount provided we killed it. The sportsman who undertock to slay the unsuspecting beast took the mate on shore with him, and, slay the unsuspecting beast took the mate on shore with him, and, according to the latter's account, seemed more inclined to shoot him than the lamb; but then sheep are by no means easy to get at when they were as wild as these were, for we could see them rushing gaily about from point to point, while R— vainly essayed to diminish the flock. Lunch made a delightful break in the day, and we made a decided hole in the grub stock. Thursday, the 2th, found us all on deck before 5 o'clock, a sight seldom seen, and therefore to be taken advantage of. One energetic member had been awakened by the noise on deck, and had second the rest, who, for a wonder, all turned out, and went

chargetes and the rest, who, for a wondered or, all turned out, and had aroused the rest, who, for a wonder, all turned out, and whether to work helping the erow at basisting sails and casting off from the wharf, Quarter of Saw in griding quietly down the river under all sail. No box was be perfectly except the crash of our gun, and the words of the pleasant. No box was to be heard, except the crash of our gun, and the words of the grid of the gr which woke the echoes for a few moments, and the rattle of blocks, as we gibed at each turn in the river. Once out of the river, our nose was pointed in the direction of home, and we made for Portland. The wind hung light at first, but freshered at about 9, and we ran in among the Islands, casting anchors in

Portland Harbor at 10.30 A.M., between the revenue cutters Dallas and the Grant. Steamers loaded with passengers, towing s initiarly freighted, were going down to the island to a great pic-nic. The schooner Tarolinta, E. Y. C., ran by, bound for Mt. Bosert. An efficer from the Dullas came alongside to take our name, port, etc., but could not be induced to come on board, as hade, port, etc., out coind not be induced to come on board, as he had to return and make out his report. Virtuous official Atabout II we adjourned on shore, and "did" as much of the town as was compatible with the heat; but it must be com-fessed that as ice-cream saloon had more attractions for us than all the places of interest. Having discovered that there was to be a variety show in the evening at one of the halls, we hought tickets, and then bent our steps to the yacht by a circuitous route, bound to take in all of the place that we could with the least in-convenience to ourselves. We sent an invitation to the *Italias*' officers to spend the afternoon on the yacht, and dilue; but, unfortunately, the government inspector was expected that after normandly, the government inspector was expected that after-noon, and they could not leave, much to our regret, as I trust they will understand if these lines should ever meet their eyes. The afternoon and evening were the most beautiful I have ever seen. The harbor was like a mirror and the sun setting be-hind the city threw it into silhouette against the yellow-timed

hind the city throw it into silhouette against the yellow-finted sky, making a truly brilliont sight. All the shipping was reflected in the water, the rays of the setting sun giving color to the surroundings, strongly reminding one of some of the pictures one sees of Venice.

Early in the afternoon the Fearless, E. Y. C., making quite a little flect. After dinner, we same, to the evident enjoyment of the erew of the Grant, who collected in her bow and listened. Several boats filled with Portland's fair sex seemed interested in our appearance, but kept at a respectful distance, probably remembering that though "music hath charms," still, "distance lends enchantment." chantment.

In the evening we went to the before-mentioned variety show and ran across an old acquaintance, who was here in his yacht and proved a great addition to the party. We spent a lively even ing, and turned in very near the "wee sma' hours." (To be continued.)

to improve its grounds, and arrange matches for the spring and

THE HAWKESVILLE CRICKET CLUB, OF CANADA.- The annua meding of the Hawkesville Cricket Club took place on April 7th, when the following officers were elected for 1889: President, T. W. Vardon, M. D.; Vice-President, D. H. Waught; Secretary and Treasurer, Hugh McCulloch; Committee of Management; President, D. 1899. nt, Vice-President, Secretary and Treasurer, and Messrs, A. Woodward, R. McMinn, J. W. Hilborn, W. R. Hilborn, R. Morrison, John R. Donald ; Captain, W. S. Hilborn.

-Mr. George Oxborrow, of the Young America Cricket Club, of Milwaukee, Wis., has kindly sent us a membership ticket for the season, for which we return thanks.

-The Times, of Philadelphia, is the best cricket daily in the Quaker City.

which are situated almost in the heart of the city, and only about ten minutes ride in the horse cars from the "down town" of Detroit. The ground covers about six acres, being only a part of the imperfectly level acres belonging to the Detroit Sporting and Recreation Company's grounds, the whole being fenced in the fecreation Company's grounds, the whole being fenced in, the Pentusular having leased their portion for a term of five years on very favorable terms. Oh! If we New Yorkers were only as snaver as these Western Inds, and could lease a ground as they have done for \$80 a year, and 100 season tickets every year thrown in, which they dispose of for \$6 each, thus netting a clear profit (including the use of the grounds) of \$300 a year. These grounds are divided into three plots, namely, one for cricket, one for base-ball, and one for archery, croquet, etc., in the center. A magnificent club house at one end, with every convenience for members and ladies. There is also a lawn tennis ground, which is though and used as a skating rink during the winter. Trees surround the grounds and a first-cluss three-quarter unite waking-track. In front of the grand stand thower gardens are being taxtefully laid out to greet the optic and mest organs of the clife of Detroit. The Peninsulars are going to creet another club house for their own accommodation, and when this is finished the grounds will be aboad of anything in America of its club house for their own accommodation, and when this is finished the grounds will be aboad of anything in America of its kind. Of course I do not know what the boys of the "Huh" are doing this spring. Mr. Calvert promises a "full house" and a tight game to any Eastern club that may fayor the Peninadars with a visit, and, I may add, Detroit is expecting one or more teems from the East this season. Mr. Calvert is convinced that it would do more for cricket in the West than they can do in five years. So let us hope the East will do something, now that three Western teams have visited Now York and Philadelphia. The "monifed crickets" of Detroit came down handsouldy when the P. C. C. went bast, and if only the New Yorkers would be lakewise. P. C. C. went East, and if only the New Yorkers would do likewise, I think the Western trip would be a certainty. New Yorkers.

REVOLVING IN CRICKET.

Editor Forest and Stream :-

Boston, April 17th.

Editor Forst and Stram:—

Thave noticed with surprise the several communications, both in your caterprising fournal and in one of your contemporards, relative to the action of the Staten Island Uricket Club at its annual meeting. All these articles would give the casual reader to understand that this club had innecently amended its constitution without accomplishing its object—in other worst, pinced itself in a false position. This view of the subject calls in question the samity of the club, as well as the read to bject in view. "Felix," in the sheet alluded to, believes it was intended as an "inforcement of the non-revolving doctrine." He says: "They intended to place obstructions in the way of 'revolving,' but overshot the mark;" but from recent inquiries I do not find that any one who voted for the amendment has, after reading "Felix," changed his mind.

The members who framed and offered this amendment, I sm credibly informed, are not antarousistic to "revolving" under "under" under "under "under".

reduly informed, are on antaronistic to "producine", i au creduly informed, are on antaronistic to "proper restrictions, and this new rule stricks me as a very product processing. It may, to be sure, prevent members of other cluss from using the Staten island grounds for practice with the various bowless of this club, and then playing in matteries against Quaker City.

Medical.

THEORY VS. FACTS.

A LL ESTABLISHED THEORIES are set used by solid facts. The solid facts in this case are, that the business interests of our fair city have been nore greatly enterprise, and the set of the

see samily that does not know its beneficial offects, would be difficult to find.

THE MANUFACTORY
is located on Mil street, from which emanates the preparation that is duly shipped to all parts of this country, and to sections of the globe over which the American Hag does not float. The business is splowidily systematical, and everything goes not quiet which the accountry that properties was done in that locality. Each department is overseen by competent persons. The items for bottles and for packing-hoses are commonsity surprising, and those who furnish these two articles alone have reason to rejoice at the decovery who have been cured by tals invaluable remedy have greater reason to rejoice. Hochester Exenting Express.

More Facts

More Facts.

String, III., Aug. 224, 1879.

We feel we must write something of the success of Hop Bitters. Their sale is thribble that of any other article of medicine. Hence we feel that justice to you and your Bitters to say that it is a medicine of real merit and virtue, and doing much good and effecting great cures.

Yours.

J. F. & H. B. Utley.

Ashlabulu, O., Nov. 16th, 1878.

Gents:—We have used your litters, and like hem very much.

Snyork & Harris.

Mirs. Shafts, Poles, etc. them very much.

Houseville, O., Feb. 11th, 1880.
I am very glad to say! have tried Hop littlers, and never took anything that did not as much good. Lonly took two bottles, and I would not take \$100 for the good they did me. I recommend them to my patients, and zet the bestrewalts from their use. C. B. Mærekn, M. D.

New Haren, Conn., Sept. 15th, 1878.

We take pleasure in giving you a notice, and a nice, strong one, as it (Hop Hitters) deserves it, whose it, and we know it deserves it,—The Register.

Wenong, Ill., Aug. 6th, 1879.

HOP BITTERS CO:—
O. Wingsate bought of us a bottle of your Bitters a fow weeks ago, and they did him an immense amount of good. We sell 24 dozen per week.

DENNY BROS.

Greenwich, Feb. 11th, 1880.

HOP Bittens Co:—
Sirs:—I was given up, by the doctors to die of scrotula consumption. Two bottles of your Bitters cuted me. They are having a large sale here.
LEROY HERVER.

Greenvich, N. Y., Feb. 12th, 1880.

Hop Bitters are the most valuable medicine I ever knew. I should not have any mother now but for them.

HENRY KAAPP.

Lone Jack, Mo., Sept. 14th, 1879.

I have been using Hop Ritters, and have received great benefit from them for liver complaint and malatial fever. They are superior to all other medicines.

P. M. Bahnas.

Ralamason, Mich., Feb. 24, 1850.

Hop Burners Mro. Co.—

I know Hop Bitters will bear recommendation bereather the street of the street of the birdest encomines, and give then predict for making cures—all the proprietors claim for them. I have kept them since they were first offeced to the public. They took high rank from the first, and maintained it, and are more called the street of the public. They took high rank from the first, and maintained it, and are more called yeep up their high reputation from the maintained from the majority of the street one before with any other patent medicine.

Physician and Druggist.

Kahuka, Ma., Feb. 9th, 1889. 'I purchased five bottles of your Hop Bitters of Bishop & Co., last fall, for my daughter, and am well pleased with the Bitters. They did her more good than all the medicines she has taken for six Years. WM.T. McClobbs.

Years.

The above is from a very reliable farmer, whose daughter was in poor health for seven or elpity years, and could obtain no relief until abe used Hop Bitters. She is now in as good health as any person in this country. We have large sale, and they are marking remarkable cures.

Süver Creek, N. Y., Feb. 8th, 1880. GENTS:—I have been very low, and have tried everything, to no anvantage. I heard you Hop Biters recommended by so many, I concluded to give them a trial. I did, and now an around, constantly improving, and nearly as strong as ever. W. H. WELLER.

Many vite compounds have been sold under the name of "bittera," but it is a comfort for the afflicted to now realize that with Hop Bitters at their command they can be cured.—San Francisco (Cai.) Chronicle.

If Lord Byron, Shakespeare Tempyson, or Lougiellow, all of them were to write, they could not meet the work they could not meet proper sufficient philological signification, nor language strong condight to express the wonderful power of strong condight to express the wonderful power of now so widely known as the best and pures this term manufactured, that it is, perhaps, superfluous to write about it. It is justly popular,—Centego Sing.

Zyseieaevsis ana Yassaaumkeag,

HE northern and eastern portions of the counties of Penobscot and Washington, in the old Pine Tree State, contain a remarkable lake region, unsurpassed in extent and diversity of scenery, affording variety for the sportsman who, with rod and gun, is willing to rough it for ten days. The everlasting hills and meadows are supplied in unlimited quantity with deer, black bear and ruffed grouse, and the lakes and rivers with duck, landlocked salmon and trout. The variety of routes this region affords is not the least of its attractions, and has only to become more widely known to be visited and appreciated by a large number of sportsmen who cannot afford the expense of long trips West.

Parties can leave Boston by rail at night, and next morning reach the pleasant town of Lincoln, Me., the most central point from which to reach the lakes. A charming drive of twenty miles to the town of Springfield brings you to Gowell's, at the head of Duck Lake, where you can find Indians and canoes. Crossing Duck and Junior lakes, through Junior stream into Grand Lake, all

Penobscot rivers. From this point many excursions may pade into the surrounding wilderness, or by lakes stendless in extent, and one can pass the time with t and enjoyment.

pront and enjoyment.
Still another route presents itself from Syseledobsis Lake, which is the one we have just completed. I subjoin a few notes from a journal kept during the trip, trusting they will be of sufficient interest to warrant their reading.

irusting they will be of sufficient interest to warrant their reading.

Through the genial landlord of the Lincoln House, Mr. David Stockbridge, familiarly known as "David," we secured canoes and a man to do general work, who proved efficient in the canoe and an excellent cook. Under David's good management we had the canoes and supplies properly leaded and sent on a head, and on the arrival of the train, Tuesday, Sept. 9th, he was in readiness with a first-class team to convey us to Gowell's. It had rained during the previous night sufficient to lay the dust, and we had a most agreeable ride through the green wilderness, over a good road, reaching Duck Lake about 3 P.M. On the shore of the lake is a club house, owned by Boston parties, under the care of Mr. Gowell, and twice a year they visit here, lawing fine success and exhilarating sport hunting and fishing. We shortly had the canoes affoat, loaded and under way. Our man Henry was in charge of one canoe, and "Brick Top," having been over the route before, was appointed guide of the squadron, and took the lead with the other canoe. Besides the two mentioned, our party consisted of Mr. E. V. Cross, of Lawrence, Mass., an expert disciple of "Izask," and a thorough sportsman, and Prof. Mills, well known in Eastern Maine as a "dead-shot" and taxiderdmist, and for his agreeable loquacity on hunting subjects, which adforded us much enjoyment and instruction. We paddled leisurely across the lake and entered its stream, nearly hidden by dense adders, and being exceedingly for his agreeable loquacity on hunting subjects, which afforded us much enjoyment and instruction. We paddled leisurely across the lake and entered its stream, nearly hidden by dense alders, and being exceedingly narrow and rapid we soon reached the beautiful, clear water of Junior, as the sun, sinking behind the high ridge on our right, was illuminating the entire surface in gorgeous colors, which we accepted as a welcome and good omen for our success. About a mile below the mouth of the stream we found on our left an excellent camping spot, and while some were engaged in gathering boughs and making camp the rest were busily employed in getting supper. David had accompanied us thus far for the purpose of being with us one night in the camp, and he proved a pioneer in the work.

Camp and supper were soon in readiness, and under the combined inspiring effects of juniper tea, camp fire and a feeling of freedom from all care, the Professor began a relation of some of his wonderful experiences by land and water. He had the field entirely to himself, and we listened long in admiration until he began a thrilling narration of his experience at Bar Harbor during a gale of wind, when we quietly dropped out one by one, and left him talking to the stars. We had an excellent bed, and slept tranquilly until the rays of the rising sun, shining in our faces, awakened us to a day of sport. While we were seared about the breakfast table an exclamation from the Professor turned our attention to the lake. His experienced eye had discerned in the distance

clamation from the Professor turned our attention to the lake. His experienced eye had discerned in the distance a flock of ducks appreaching us. We all made preparations for their reception, and began the day with seven black ducks, handsomely stopped by the Professor and "Brick Top." While Henry was gone to Gowell's, with David, we broke camp and were ready to start on his return. The day was warm and clear, and the six mile stretch of water before us was calm and transparent as glass. The numerous islands at the head of this lake, closely crowded together, somewhat interfere with its outline, but after passing them it expands into beautiful shape nearly two miles in width and the shores hand-somely wooded. Near the islands land-locked salmon are found in blenty, of good weight and game. Vose

lakes, through Junior stream into Grand Lake, all well-stocked with land-locked salmon, you have the choice of several routes, either of them offering sufficient attractions to render them enjoyable, and not to be forgotten. You may cross Grand Lake to the falls, and by a short carry enter Big Lake, thence into Long Lake to Princeton. Carrying by the mills a short distance you can continue your route by the St. Croix River to Calais. At Grand Lake Falls is unexcelled land-locked salmon fishing in the season. There Mr. Atkins, the agreeable fishing in the season. There Mr. Atkins, the agreeable and has had uniform success, sending fish from this stational always and has had uniform success, sending fish from this stational lover the country.

Another route from Grand Lake, some distance longer is through Pocompas Lake and stream into the beautiful Syseledobsis Lake; crossing a short carry into the chain lakes, headwaters of Machias River, down which you can reach Machias. In this region is one of the most remarkable watersheds in existence. The lakes—Chain, First, Second, Third, Duck, Unknown and soveral smaller ones—are nestled together in a comparatively small space, sall easy of access to each other by short carries. We have here the waters of Machias, St. Croix, Union and

crossing which a person with a canoe will have to exer-

crossing which a person with a canoe will have to exercise due caution when there is any wind. We took dinner on the beach, with this handsome view before us, and Vosc, noticing the peculiar formation of the point of land opposite us, drew from the Professor this story, which he told with thrilling effect:—
"Several years ago the enterprising lumbernen of Calais sent men into this region to secure the pine. During the season of rafting, men were employed in squads of three and four to pick up the scattered logs. One of these squads, while so engaged, went ashore on this point to prepare their breakfast. Just as they got it in readiness they discovered their batteau adrift, and one of them started to recover it, saying in reply to one of his mates, who urged him to eat his breakfast first, that he 'would get that batteau or eat his breakfast first, that he 'would get that batteau or eat his breakfast first, that he 'would get that batteau or eat his breakfast first, that he 'would get that batteau or eat his breakfast in h-.' He swam out to the boat, and put his hands on to it to get in, when he gave one despairing yell and went down. After several hours' search his mates recovered his body, took it back to the point, and tied it to a tree near the shore with a two inch hawser, and then started to the settlement to procure a coflin. They returned the next day, bearing the coflin, but found their mate gone and the hawser broken in two. They left the coffin and retraced their steps to the settlement, saying their mate had been dragged into the lake by a large serpent, whose

traced their steps to the settlement, saying their mate had been dragged into the lake by a large serpent, whose track they plainly saw."

From that day the point has been known as "Coffin Point." and the story of the man's disappearance is firmly believed by the Professor and every one about the mills below. The Professor confirms this story by finding the bottom of the coffin five years afterward, while there winter fishing, and using it to make a pair of snow shoes.

We passed into the lovely Pocompas Lake, apparently sprimitive and wild as when the Indian alone canced We passed into the lovely Pocompas Lake, apparently as primitive and wild as when the Indian alone canced its waters and hunted its majestic shores. Entering its stream, we passed up two miles and camped for the night. While supper was in progress "Brick Top" started on an exploring expedition on his own account, and shortly returned with the intelligence that we were on the right stream, but a few rods below Syseledobsis dam. This so relieved the anxiety of Vose and the Professor that they became at once animated and happy, particularly the Professor, who felt somewhat limited in time, having an engagement to deliver a lecture on natural history toward the close of the month.

Professor, who felt somewhat limited in time, having an engagement to deliver a lecture on natural history toward the close of the month.

Thursday morning was bright and warm. Soon after breaking camp we reached the dam. We found Mr. Ball here, one of the assistant fish commissioners, who has admirably arranged breeding houses, and, being an enthusiast in his work, is very successful. He also has care of the house owned by the "Dobsis Club," which club is composed of several prominent gentlemen of Massachusetts, who visit here regularly. Their catch of Innd-locked salmon in May was fully up to the average for several years, which is large. We passed the morning here, visiting the hatching works, and getting much useful information from Mr. Ball. He and his wife remain here the year round, twenty miles from any settlement, their mode of locomotion being cances in summer and snowshoes in winter. We left the dam, accompanied by them, about 3 o'clock, and started around Big Island and up the lake to our camping spot, selected for us while at the dam. We met here two gentlemen from Boston, returning from a cruise in Chain lakes, reporting excellent success. Reaching the head of Sig Island, we bade adieu to Mr. Ball and wife. Following their instructions, we trolled for salmon in both cances, and caught several beauties, some weighing five pounds.

We reached our camping spot about dark, and found it a dry, sandy beach. After supper we prepared birch bark torches, and lashing the cances together started around torches, and lashing the cances together started around

several beauties, some weighing five pounds.

We reached our camping spot about dark, and found it a dry, sandy beach. After supper we prepared birch bark torches, and lashing the canoes together started around the shore of the lake to spear any luckless fish we should see. Yose made a striking tableau as he stood motion-less in the bow with the spear poised aloft, the lurid light of the torches casting a brilliant halo about him, showing him in bold relier against the surrounding darkness. Saddenly he made a vigorous thrust, and in a second landed a huge sucker. So we fished for an hour, catching nothing but those big, listless fellows who gave up the ghost with a squack like a guinea pig.

Friday morning was rare and beautiful, even in this, our best season of the year in Maine, and the glorious prospect before us of water and wilderness was sufficient to repay us for our journey thither. After an early breakfast, Vose and Henry went up the lake to try the salmon, while the Professor and 'Brick Top' took the high ridge behind us. In two hours we were assembled about the camp fire comparing notes, with the following results: Five land-locked salmon, averaging three pounds; two salmon trout, weighing respectively one pound and one pound and a half (these last named are the handsomest fish that swims); seven partridges, one white-leaded caple, shot by the Professor on the wing, and one red-headed woodpecker. While the Professor was busily employed with knife and seissors preserving the cagle and woodpecker, we had camp broken and were in readiness to start.

were in readiness to start.

Pushing out into the lake, we had a beautiful scene

presented to us—six miles of perfectly calm water stretching away to the blue hills in the north, with a width of two miles or more, its shores accurately portrayed in its blue depths. We had no hesitancy in declaring this the lake of lakes in Maine. Its Indian title, Syseledolosis, is most significant, meaning "a lake with big rocks in it." The water is clear as crystal, and to a depth of forty feet we clearly discern great shelving rocks; in many places they would seem to rise abruptly before us, with little or no water over them, when in truth they were many feet below us. The lake was unusually high, and our catch of fish was limited in consequence.

quence.
We reached the head of the lake and our first carry

trath they were many feet below us. The lake was insusually high, and our catch of fish was limited in consequence.

We reached the head of the lake and our first carry after a delightful sail, and getting cances and higgage out started over a good road to the dam, about a mile distant. We had everything over in three hours, and finding sufficient water at the dam to float our cance into the lake above, we settled on camping there for the night and fishing the stream. While supper was in progress, Vose caught trout enough to last us several days, some of two pounds.

Saturday morning found us abroad early, and in readiness for the Passadumkeag range of hills beyond us. The maps erroneously give Syseledobsis as one lake, about wentry miles long, while in fact it is separated by a stream narrow and rocky, and navagable only from the dam to the lake above, called Crooked on the maps, which is about as large as Syseledobsis. We pushed across this lake to Porter's Landing, and made preparations to pass the day and night. Vose and "Brick Top" climbed the high ridge above us, the watershed between Sc. Croix and Penotecot waters, and proceeded to Mr. Porter's camp, receiving a hearty welcome from this gentleman, who, reared in luxury, prefers the solitude of the woods. Securing his hound, they went out on the ridge, running parallel with the lake for two miles, and letting the dog loose, returned to our camp by the shore. The Professor readily left his specimens and arsenic, and accompanied "Brick Top" in his cance to a station down the lake favorable for the entrance of the deer, while the other cance was placed at an equally favorable point above. We had been in waiting scarcely half an hour, when we heard the baying of the hound, gradually becoming more distinct, and apparently in a direct line with the point covered by the Professor and "Brick Top," Before we got our guns in readiness a noble buck was in full sight of us. Pausing only a second to suif the air about him, he plunged into the lake. We waited patiently

forts of our trip. But as we were all volunteers, we made the best of it with good grace.

Ar, Porter soon appeared with his team to convey our camoes and belongings across the three miles between us and the Passadumkeag River. After many breakdowns and several trips, we got everything in sight of the river about 4 o'clock, and were all tired and wet after our hard work. The rain ceased shortly after we got our traps into the woods, and we quickly had a rousing spruce log live, and dried boughs enough to give us a comfortable heaf for the night, which was duly appreciated by us all. We decided to remain at this point for a day or two, and as the river was unusually high we argued that the trout holes below would be flowed out, and our best fishing would be above us. The result proved our wisdom, as we caught during Monday nearly two hundred handsome follows, some of three pounds. During Tuesday we remained about the camp, fishing a little, sleeping a good deal, and at work loading shells for duck shooting below. The unmerous creeks and streams along the stream are an excellent feeding ground for ducks, large numbers and several varieties frequenting these places during the season. It rained heavily again during the night, but Vose's waterproof tent sustained the reputation of the maker, and we passed the night as dry and comfortable as if we had been at home. During the evening the Professor

ion. It rained heavily again during the night, but Vose's waterproof tent sustained the reputation of the maker, and we passed the night as dry and comfortable as it we had been at home. During the evening the Professor was engaged in packing the specimens preserved by him during the trip. They contained arsenic enough to poison the entire population of the township which we were in. Wednesday was cloudy and cold, with strong indications of more rain. We broke up our comfortable home in the woods and commenced our descent of the river, whose Indian name, Passadumkeng, meaning "Meadow River," is most appropriate, and if they could have extended its title to include "very narrow and extremely crooked," it would have been described completely. There is quite a current for its entire length, and its deep, dark water is full of excellent breeding and feeding ground for the trout. We reached the Taylor brooks about noon, and caught a few nice trout, while the rain fell no us in torrents. The mouths of these brooks are reputed places among a few anglers carlier in the season, and weep fished by distinguished parties, containing Judge Clifford, of the Supreme Court, and Senator Handin, of Maine, during May and June, with splendid success. We passed sevaral parties gathering cranberries, which grow on the meadows in vast quantities. The river in many places is very picturesque, and for a time we follow its crooked course far into the open meadow, turn suddenly about and enter the woods to continue for two or three miles, its width in no place exceeding one hundred feet. miles, its width in no place exceeding one hundred feet. These changes from meadow to forest are most agreeable. mites, its width in no place exceeding one fundred ret. These charges from neadow to forest are most agreeable, and break the monotony of the trip. The flora of this region, although somewhat meager, was learnedly analyzed by the Professor as we glided quietly along. We made camp early, and after a royal supper of broiled duek, parridge and trout, our wet clothes were forgotten, and we contentedly sought the shelter of our canvas

Thursday morning was bright and beautiful, and, after the cold rain of the previous days, was thoroughly en-

joyed by us all. We started early, having a day of hard work in prospect. We passed the mouth of Nicatous stream, which runs ten miles from the lake of the same name, and reached Grand Falls about noon. These falls pitch suddenly down the river to the lowland below, nearly three hundred feet. The water was high enough to enable us, with care, to drop down to the dam, but it proved a rough place for the canoes. The Professor and "Brick Top" were obliged to get out after a few rods and wade their canoe through the boisterous current. There is a good carry road on both sides of the falls, and we should have got by more comfortably had we carried the whole distance, about a mile. Taking out the canoes at the dam, a short carry took us to the calm water below, and getting a hasty dinner we were in readiness to leave for our intended cump on the shore of Saponic Lake, eight miles away. We had seen but few ducks above the falls, but made preparations to encounter them on our way down, as we heard a party who left a few moments ahead of us firing repeatedly. Judging from their excessive shooting, we concluded we should get nothing but cripples. We had gone but a few rods, when a handsome wood drake flew up from the grass ahead of us, which the Professor tumbled into the stream with a well-directed shot. In about five miles of our journey from the falls we shot five wood drakes, four black ducks and two blue-winged teal.

To any one in a hurry a trip down this river would prove most exasperating, as its fortuous course continues for its entire length, while the distance must have been computed in air line, as in traversing the eight miles to Saponic we were unauimous in the opinion that we had traveled twelve. The triver makes one more abrupt turn joyed by us all. We started early, having a day of hard

computed in air line, as in traversing the eight niles to Saponio we were unaulmous in the opinion that we had traveled twelve. The Frier makes one more abrupt turn to the right, and opens immediately into a lake of which we had no previous warning. It is nearly circular in shape, and about a mile in diameter, abounding in picturel and white perch, the trout being exclusively confined to the water above the falls. The settlement of Burlington, on its north shore, gives us our first intimation of returning to civilization. We found the party concamped near the spot we intended to occupy, and while we were getting camp in readiness the Professor was interviewed by them, and his conscious smile of superiority must have been blighting when, in comparing notes of the shooting, they brought forth two black ducks, having expended powder enough, as they admitted, to supply a company of infantry, while he silently pointed to our eleven with an air of pride he could not conceal.

lently pointed to our eleven with an air of 'pride he could not conceal.

After the excellent supper prepared for us had been fully discussed, the Professor was soon learnedly discoursing upon the different methods of taking fish, deer and other game, with our united parties as auditors. We listened with admiration to his excellent ideas, clothed in graceful language, until, in his entire absorption in relating his experiences, he got into repetition, and as he commenced to relate, for the fortieth time, his experience at lar Harbor during a gale of wind "most terrible, gen-tlemen, yes sir," we of our party quietly withdrew to our bed, leaving the other party spelibound at his thrilling narrative of events that only occurred in his imagina-

tion.

Friday morning found us early astir, as this was to be Friday morning found us early astir, as this was to be our last day out, and although we were but fifteen miles from the town of Passadumkeag, where we were to take the cars to our several homes, we had before us several rapids and one or two carries, for which we must make due allowance of time. We were across the lake at an early hour, and encountered at the outlet the first of the sward waids in our path. This vanid was short like early hour, and encountered at the outlet the first of the several rapids in our path. This rapid was short, like them all, but very rocky, and it required considerable skill to keep our frait craft clear of the white-crested rocks that stood up all around us, by which we rushed with railroad speed; passing one other safely we reached the town of Lowell. Carrying over the dam, a few rods below, we had canoes afloat again and in readiness to start about roon. Before leaving we called on Mr. J. Darling, whose home is here. We found him busily engaged in building a canvas canoe, several of which he had in his workshop completed. He has acquired a reputation as a builder of canvas and birch canoes only equaled by his workshop completed. He has acquired a reputation as a builder of canvas and birch cances only equaled by his reputation as a successful hunter and guide. No better man could be engaged for a hunting and lishing trip any-where in Maine, as he is familiar with all the lakes and

laking our places in the canoes for the last time, lating our places in the canoes for the last time, we reluctantly started for our destination, ten miles below. Passing in safety many rapids in quick succession, we arrived at Passadunkeag, at the junction of the river with the Penolscot, in good season for the train which was to break up our party.

We had enjoyed the best of health for the entire trip, and fell our budies and minds renewed by our pourly.

and felt our bodies and minds renewed by our rough experience, storing up the pleasantest of reminiscences, to be recalled during the long winter nights before us.

HISTORY OF NORTH AMERICAN MAMMALS.

THE announcement, which we are now enabled authoritatively towns and thoritatively to make, of the early appearance of Dr. Coues' proposed work on North American mammals, will be received with satisfaction by the public at large. Scientific men have been anxiously looking for the publica-tion of this work, and to that far larger class, who are interested in nature, but lack the time and opportunity to make a study of science, this great work will be especially welcome,

Happily, a recent act of Congress makes provision for the publication of Dr. Coues' work as a final report on the Zoölogy of the Hayden Survey, and as a considerable part of the manuscript is ready for the printer, it seems probable that publication will not be delayed longer than may be necessary for the completion of the illustrations,

many of which, we understand, have already been pre-

We are sure that all our readers will be much gratified at this information, and will feel glad to do all in their power to aid in the forwarding of so desirable a work, More than three years ago we published in these columns the circular reprinted below, with some comments on the desirability of the work proposed, and in the carnest hope that the readers of FOREST AND STREAM might come to the front as co-laborers with Dr. Cones in so good a cause. In this hope we were not disappointed,

We now reprint the appeal as a reminder to our old readers, as well as that our many new ones may see it. and we hope that before the end of 1880, Dr. Coues may receive from them many reports.

Any information should be addressed to Dr. Elliott Coues, Washington, D. C.

WAR DEPARTMENT, SURGEON GENERAL'S OFFICE,
WASHINGTON, March 31st, 1877.

CIRCULAR ORDERS,

No 1.

The attention of the Medical Officers of the Army is particularly invited to the following communication addressed to them by Assistant Surgeon Elliott Coues, U. S. Army.

It is hoved that their assistance and coliperation will be electrically in the control of the con

fully given for the reason stated and in the manner indicated by

By Order of the Surgeon General:

C. H. CRANE, Assistant Surgeon General, U.S. Army.

OFFICE OF GEOLOGICAL AND GEOGRAPHICAL SURVEY,
WASHINGTON, D. C., March 13th, 1877.
To the Medical Officers of the Army;—
Medical officers of the Army, and others who may be interested in the matter, are respectfully and carnesty invited to co-operate with the undersigned in the preparation of a work entitled. "His configuration of the work of the foregraphic of the published by the Government, or the properties of the properties of the configuration of the configurat

comment.

It is now twenty years since the bast general work upon the quadrupeds of this country appeared. The progress of our knowledge during this period renders the demand for a new treatise imperative. It is proposed to make the forthcoming "History" a standard solicitite treatise, covering the whole ground, and fully exhibiting the present state of our knowledge of the sub-

sel. The plan of the work may be onesy manumals according to cludes:—Lindes:—L

the latest and most approved views of leading therelogists, including diagnoses of the orders, families, genera and species. 2. The most acceptable nomenclature of each species and variety, including much anotationed description of each species and variety, including much anotationical detail, especially respecting the skull and teeth.

4. The enhorant technical description of each species and variety, including much anotationical detail, especially respecting the skull and teeth.

5. The "infe-histories" of the species, or an account, as full and complete which much remains to be it can be a substantial and complete as it can be made, of their habits. This is also a Lanter requiring much further study.

White the stretch sedestilities character of the work will be maintained, the "life-histories," being of general interest, will be divested as far as possible of technemities, and treated with a free hand, in popular style. The author has long been engaged in the publish at no distant day. His resources and facilities for the preparation of the descriptive and other technical portions of the treatists have been analy: His resources and facilities for the preparation of the descriptive and other technical portions of the treatists have been analy: his them has still, in common with the preparation of the descriptive and other technical portions of the treatists have been analy: his thin the still, in common with the missistence of medical and other officers of the treatists have been analy: his thin the still in common with the missistence of medical and other officers of the careet, and the major and a deteror of the careet, but which, it is hoped, may now be made fully available, which will be prepared to the various species found in any given forcers, but which, it is hoped, may now be made fully available, worked out only by means of observations made at those prepared to the various species found in any given forcility, not in many cases, represent a fund of information and common various stations, would gr

SOME SOUTHERN REPTILES .- The chameleon of the South is a very interesting saurian, and belongs to the family of Anoles. What its specific name is I am not naturalist enough to determine, but think it is A. opalimus. They are beautiful little creatures, and are met with everywhere in the Gulf States. I have often amused myself by the hour watching their playful gambols with one another, or the skill and agility displayed in catching flies and insects. Their normal color is a bright green, but they can change it almost instantly to dark brown, ashy grey, grey suffused with red, and all shades between. They change to these different colors when alarmed or angry, or when they wish to avoid observation. When in their joyous moods they protrude the skin of the throat in the form of a brilliant red frill or They are easily tamed, and soon learn to know their friends, evincing much pleasure when petted. They are very useful, also, and will keep a house free from flies, roaches and ants, if allowed to roam at will.

In one of my rambles in the scrub bordering the St. John's River I killed a snake about eighteen inches long. three inches diameter of body; tail, two inches in diameter, very obtuse-leaving me to infer that the reptile had lost a portion of his caudal appendage; head as large and triangular as a six-foot rattlesnake; eyes very large and brilliant, at least one half-inch diameter fangs, very long and large. The snake was very brilliantly marked with red and yellow on a black ground, and was killed in his tracks, either unwilling or unable to move. Was very savage, and fastened himself on the stick with which I killed him. Can any of your readers name the reptile? NAUTICUS.

NOT "EVERLASTINGLY."-In his note last week our correspondent wrote: "If 'Peregrine,' who chatted so enter-tainingly in your last issue," etc.; and he did not write, as the types made him say, "chatted so everlastingly, We make this explanation in justice both to "H. H. T." and to "Peregrine," and we hope that the blunder may not defer them from sending further contributions to our

MANY-COLORED SQUIRRELS.—Washington, March 12th,
—I read an article in FOREST AND STREAM of March 11th,
taken from the San Francisco Chronicle of Feb, 7th, in
relation to the ireaks of nature in changing the colors of
various birds the present season, and it brought to mind
the facts detailed below, which I think have never been
published.

the facts detailed below, which I think have never been published.

A gentleman named K——owned a considerable plantation in the county of Marlbrorough, S. C. His dwelling was some two or two and a half miles east of the Big Pce Dee River, and a short distance east of the planters of that section, he owned a body of land reaching from the sand-hills to the river banks, and the fibe planters of that section, he owned a body of land reaching from the sand-hills to the river banks, and the "low grounds," or river portion of the land, was most productive, and therefore most thoroughly cultrated. There was quite a large tract of woodland surrounding the dwelling, and here were to be found oak, hickory, beach, maple and gum, all furnishing food in great abundance for the common gray or "cat" squirrel, which could be found in very large numbers all over the plantation. Very few fox or black squirrels were ever seen in that particular section, but these were quite numerous in the pines and also in the cypress swamps, some distance away.

Some thirty-five or forty years ago Mr. K—— had presented to him a pair of milk-white squirrels. Where they came from, or of what species they were, I do not know. I never saw them, but I have heard them described as being of the same size and appearance of the gray, but their coats were milk-white, and something finer than that of the gray. Mr. K—— prized highly his new pets, and after getting them thoroughly tamed, gave them the run of the woods adjoining the home-place. When the season arrived, they selected a tree only a few rods from the dwelling, built their nest, and in course of time produced two young ones, also milk-white. Mr. K—— then "posted" his land—i. e., advertised it according to the law of the State, and refused to allow a gun to be fired on his plantation.

The squirrels were very profile, and in course of time produced two young marked with eccalet, they began to change their color, and from being pure white could be met with occasionally, marked with every possible A gentleman named K--owned a considerable plan-

could be met with occasionally, marked with every possible variation of black and white. I killed at various times at least a dozen thus marked. On one occasion I was hunting in the swamp on the west bank of the river, fully ten miles from the nearest point of the K— property, and came across one. He was sitting on a limb of a large pine, eating a nut, and although I tried very hard, I failed to get within shooting distance before he disappeared in a hollow of the tree; but he was so beautifully marked I determined to kill him, and so very cautiously approached within easy range, and seated myself to await his pleasure in making his appearance. It was near the maddhe of the day, and doubtless he went in for his noon hap. Anyhow I had to wait nearly three hours before he again came out, but this time I was ready for him, and soon had a bullet hole through his neck. His coat was just perfectly beautiful, being a deep, sparkling black, except the ears and the large, bushy tail, which were

snow white, save a small commingling of the black and

snow white, save a small commingling of the black and white at the root of the tail, and the lower part of the belly and inner edge of the flanks, which were a clear ash-gray; altogether one of the prettiest things I ever saw. Unfortunately my rife bullet had almost severed the head from the body. I saw other specimens almost as pretty as this.

I think they have almost disappeard now—at least, I have seen and heard of but one since the war, and this had been killed by a negro boy with an ex-army musket. I examined this one, and found the marking not near so pretty, or the color so distinct—in fact, the white was turning to ash and the black to brown—the consequence, I suppose, of wild breeding.

I suppose, of wild breeding.

II AIR_TRIGGER. suppose, of wild breeding. HAIR-TRIGGER

AN INTRODUCED SHELL—Haldwinsville.—While at Oswego, N. Y., in June, 1879, I found a small shell in great abundance on the docks, which was new to me, and which I could not assign to any American species. Dr. Lewis at once pronounced it a Bythinia, a genus hitherto unknown in this country, but was not quite sure of the species, and so sent it to Mr. G. W. Tryon, who identified it as B. tentacadada, Linn, It was in such abundance that I collected some thousands. A few weeks later Dr. Lewis received it from Troy, N. Y., and this spring I found it plentiful in the Eric Canal at Syracuse. It had probably come in water-casks to Canadian ports, and found it plentiful in the Erie Canal at Syracuse. It had probably come in water-cashs to Canadian ports, and thence been distributed by other vessels. It seems likely to increase and spread as rapidly as English sparrows, and is ather a pretty little shell, brown or yellowish, and intermingled in size and form between Medantho and Amuicola. Apropos to migrations of this kind, Thay say that I found two western unios at Syracuse (U. parvis and rubiginosus), while some eastern species were as clearly working their way west.

W. M. BEAUCHAMP.

TAME RUFFED GROUSE.—An Ontario, Canada, correspondent, who writes over the initials of "J. J. B.," has been moved by the communication of "E. S. K.," of Worcester, Mass., which appeared in a recent number of FOREST AND moved by the communication of "E.S. K.," of Worcester, Mass., which appeared in a recent number of FOREST AND STREAM. to give us, at second hand, the following incident, related to him over thirty-fivo years ago by one of his father's farm hands. He says: "I am the son of a farmer who was one of the earliest sottlers of this part of Canada—the old Niagara district. In old times peas were raised for feed, and were considered a good crop for clearing land for fall wheat. While James McDonald, my father's man, an Irishman from the "ould sod," was sowing pea-ground adjoining a thick undergrowth, a line ruffed grouse came out of the brush for the peas, and seemed well pleased with the food; so much so that when McDonald came up to where it was, it did not fly, but merely moved out of his way, as a common fowl might do. The bird returned the next day, and the man declared that before he had fluished the field, it came up to him and took peas from his band. Shortly after this, however, it disappeared, having, very likely, fallen a prey to some pot-hunter. The above account narrated to me when a small boy, made a great impression on me. It was my first lesson in game protection, and will not soon be forgotten."

PLGMACITY OF THE ENGLISH SPARROW.—Our correspondent, Mr. J. Otis Fellows, writing to us from Hornells ville, N. Y., tells us of the following extraordinary incident. He says: "A short time ago, I was walking with ny wife in one of the principal streets of this city, when a sparrow furiously attacked a stuffed oriole my wife wore on her hat. The oriole is very life-like, and was set up by Charles Benzinger, taxidernist, of this place. The sparrow was a cock, and very dark colored."

An Albinistic Robin,—This robin was killed April An Albinistic Robin,—This robin was killed April 16th by a friend, who kindly gave it to me. It presents rather an odd appearance with the following albinistic traits: Its tail is pure white, with a broad band of black across the thi; two of the secondaries of the left wing are partially white, the half nearest the tips being of the normal color. There are, in addition to these peculior markings, two white feathers in about the middle of the back. Otherwise this bird is not dissimilar to the ordinary ones seen about our door-yards.

Minicapolis, Minn. WM. L. WOLFORD.

THE BERLIN FISHERY EXPOSITION.

[From our Staff Correspondent,] BERLIN, April 22d.

HE opening of the World's Fishery Fair at Berlin THE opening of the world's rishery 1 and took place on April 20th, in strict accordance with the programme, and the city was in a high state of enthusiasm over the event which had so long been talked of and was now made a reality. As early as 8 o'clock the people began to assemble to see the invited guests arrive in their carriages, and perhaps to get a glimpse of the Crown Prince himself, the most popular man in Germany, and who, in presence of invited guests and exhibitors only, was to formally open the first "Internationale Fischerei Austellung" which the world has seen, the birth of which has been watched with so much interest lest it should prove abortive, but whose success was assured on the second day, when it was estimated to have been visited by 20,000 persons, who were by turns surprised and delighted.

One is struck at first by the beauty of the exhibition, and soon sees that this is the element which attracts so many ladies; for beauty and good taste are everywhere displayed in close proximity to the objects of interest to a student of the fisheries which are not in thomselves beautiful, while there are portions where the ornamental is the main feature, such as the grotto of rock work with openings on four sides, showing broad views of the Bay of Naples, while living fish swim in the pools beneath, and shalactites droop from the overhauging rocks, the great fountain of Neptune, with parterres of flowers, and the aquaria.

Berlin has a fine aquarium on the main street. Unter dern lindes a me aquarium on the main street, order Linden, and its Director, Dr. Hermes, makes a dis play of his transporting apparatus, live fishes, etc., and annong the latter we find a tank of small eels, perhaps six inches in length, which are labelled "male eels," and

play of his transporting apparatus, live fishes, etc., and a mong the latter we find a fank of small eels, perhaps six inches in length, which are labelled "made eels," and in a amounce stat the male is seldom larger, and that by the investigations of Dr. Syrski, of Trieste, it is now to possible to distinguish the sexes with certainty. This will be referred to again after a closer examination, and a more complete explanation may be obtained: but all is yet in a state of busy preparation for the jury of awards, and the American Commission, whose goods arrived so late, have been too busy to see anything, and hence no information on the subject of the sexes of eels is to be derived from them. They had their different departments in order just in time for inspection by the Crown Prince and suit through their great exhibit, and explaining the uses of the articles, would have suspected that they had been up nearly all night working like beavers to have them house in order in time for the opening. In the Department of Natural History, the finest display is made by Italy; but in this, as in all others, it is too soon to attempt a description of the articles, on account of the size of the exhibition being so much greater than was expected, at least by the writer, and the additional faster that there are many goods yet to be placed in position.

In the exhibit of the United States there are but few private exhibitors, the main portion being sowned by the National Museum, and it is therefore be recurred. There are also but few articles in the American exhibit to be sold, and these are the oil paintings of Salmo salar, 8, quimat, the common mackerel and Spanish mackerel, by S. A. Kilbourne; a Salmo salar, by W. N. Bracket; a shadow cance and a Shattuck boat. The display of angling apparatus is mainly made by England and America, the competition and where the rest of the world gets its fine tackle from, always provided that the rest of the world gets its fine tackle from, always provided that the rest of the world gets its

of obstacles to encounter. It is a matter of regret among the Germans that Prof. Baird did not come, and although it has been explained to them many times that the important work of gathering statistics concerning the fisheries now in progress in to them many times that the important work of gathering statistics concerning the fisheries now in progress in connection with the census of 1880, whereby it is hoped that it will not again be necessary to pay five and a half million dollars for privileges of questionable value, the work on the new National Museum, together with his other labors in the Smithsonian Institution and with the Fish Commission, all readered it impossible for him to leave the country at this time, still they regret it; and only a few days ago, at a dinner party, Hore von Behr, President of the Deutsche Fischerei Verein, proposed the toast; "Prof. Spencer F, Baird, the man who like done more in fish culture and to advance its interests than any other man in the world," and afterward added; "The only thing in connection with the International Fishery Exhibition which I regret is, that Prof. Baird could not do us the honor to be present at it." Next week, when all is in smooth running order and the catalogues are corrected, it will be possible to get definite information concerning the special features shown by each country, and perhaps to get a peep into the mysterious processes of fish culture in all these countries, gathered here to vie with each other in presenting their scaly products to the world.

FISH IN SEASON IN MAY.

Trout, Salvelinus fontinalis.
Salmon, Salmo salur.
Salmon, Salmo salur.
Salmon Trout, Salmo confinis.
Shad, Alosa.
Grayling, Thymmallus tricolor.
Land-locked Salmon, Salmo gloveri.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: Mate, Town, County: Means of access; Hotel and other accommodations: Game and its Scasor: Fish and its Season: Boats, Guides, etc.; Name of person to address.

-The angling season is in full blast, and the disciple of the gentle art is rewarded by fat creels and novel experiences, as is shown by the pleasant notes sent to us and published herewith.

Ocuossoc Angling Association.—The ice will soon leave the Rangeley lakes, and the spring season will then open. The club was never in a more prosperous condition than now. Its membership, which is limited to fifty, is full, and several applicants are awaiting va-cancies. There are about \$500 in the treasury, and no floating debt. The officers are: President, John II. Kimball, Bath, Me.; Vice President, Lewis B. Reed, New York; Secretary and Treasurer, James A. Williamson, New York.

RANGELEY LAKES.—Large preparations are being made in our Rangeley region this spring, and the fun will soon commence, as the lakes will be clear of ice by the 12th, and good fishing is expected early on account of the lowness of the water.

MAINE—Indian Rock. May 9th.—The ice left the Rangeley Lakes on the 7th. F. C. B.

Mangeley Lakes on the 7th.

Aug Sth.—Trout fishing opened with us the first of the month, and the disciples of Izaak have not been idle. The past week some fine baskets have been shown, one numbering nine-teen trout, weighing nine pounds, being 'high hook." A shad was seen in the fishway to-day, the first that has been seen in the Rashua for nearly forty years, when they were plenty. The Fish, Game and Gun Club held their annual meeting on the 6th—President, Dr. Edward Spadding; Yice President, V. C. Gilhuan; Executive Committee, A. W. Greeley, Aaron King and Gill, Shatmock; Secretary, Geo. H. Wilkins: Treasurer, Geo. F. Andrews, Attorney, E. E. Parker. A rifle club has been organized by some of our best shots, with Dr. Geo. T. Greeley as President. Their first meet was held this afternoon, which resulted in fine scores for new men with new rifles. The Ballard is the correct thing with them, the majority which resulted in fine scores for new men with new rifles. The Ballard is the correct thing with them, the majority being equipped with that arm. The glass ball club have weekly meetings. Edward Towne and Henry Paine carry off the honors, which are about equally divided between them. The interest in out-door sports shows a healthy growth, the latest thing being an archery club, which bids fair to become an institution among us. So mote it be.

MASSACHUSETTS.—One of the Boston papers reports that a string of nineteen line trout was taken by an accomplished artist angler within ten nilles of Boston a few days ago; and we presume that the artist is Mr. Walter Brackett.

-W. Holberton showed us a very handsome lot of trout from Long Island, caught on flies, and all wild. We can youch for the flavor of them from personal in-

vestigation.

FLY CASTING AT THE CONVENTION.—Escanaba, Mich., April 20th.—Why bar out such men as Green and Wood with the rod at the State meeting? It looks to me like small boys quarreling for dad's boots and vest, when the boots would come up to the arms, and the vest would be but a little above the floor. What can be done by them can be done by others, if they will go in and practice. It takes years to get up to a high standard, say ninety to one hundred feet, with 12½ foot rod. I think it can be done.

hundred feet, with 12½ foot rod. I think it can be done. A. F. Y.

A WIDE-AWAKE CLUE.—Rome, New York, May 6th.—There is probably no other city in the State that is so accessible to a great number of small and large trout streams as Rome. Thus far the trout season has been a most auspicious one; this is true to the extent of taking fish that weigh from two to six ounces as yet. Those of greater size do not seem to take a bait or fly. A good many large ones have been killed, but in comparison to the number taken of the sizes noted above, the larger ones are few. The successful fisherman still keeps on the small brooks, as the larger creeks contain too much water. The well-known sportsmen Cal, Link and Wm. E. Scripture, after whipping the surface of some of the smaller brooks for one day, brought in thirty pounds. For some years quite a number of the brooks that are tributaries to the Mohawk have been "fished out," This spring these have been restocked with trout from the State harcheries. This noble work has been done by the Rome Sportsmen's Club, a club which is one of the most active, vigorous and healthy organizations in the State, its rolls containing the names of persons who are of the most influential and respectable in this city. At their spacious and elegantly furnished club parlors last evening, the following officers were elected for the ensuing year: President, B. Whitman Williams; First Vice-President, Dr. A. T. Van; Second Vice-President, Hugh H. Jones; Secretary, Chas, F. Sturdevant; Treasurer, Ackley P. Tuller, Executive Committee: W. C. Wheeler, Henry M. Lawton, Wm. E. Scripture, Lewis Gaylord, Jas, Elwell.

Pennsylvania.—Betlehem, May 4th.—It is pleasant to know that, even in the cultivated portions of this State, Salvelinus fontinalis is not entirely extinct. A few days ago I saw a dozen handsome ones taken within twelve niles of this place. Of course, it would be unjust to the angling fraternity here to tell just where they were taken, and so that must remain a secret.

The "Redfish" Identified.—San Francisco, Cal., April 23d.—Editor Forest and Stream:—Through the kindness of B. B. Redding, fish commissioner, of California, I have lately been enabled to examine a specimen of the Idaho red-fish, of which species you published a figure in Forest and Stream, Nov. 13th, 1877, but of which no authentic example has hitherto reached the eastern ichthylogists.

included in the catalogue and the total catalogue and the seater in thithy logists.

As I suspected from your figure, this fish is one of the species of Alaska salmon, the Oncorhynchus nerka (Walbaum), Gill and Jordan.

Dr. Ginther remarks of this species (which he calls Oncorhynchus lycuodon):—Pallas and Richardson agree that this is a migratory species, which according to the former ascends the river entering the sea of Okhotsk in the month of May. It is equally abundant on the American side of Behring Sea, and known to the fur-hunters on the Yhkon River by the name of reddish.

Dr. Suchley speaks of it as Salmo cooperi, as be ing called in the Okinakane River "the little red salmon." It frequents this river and the lakes above it in immense numbers, its peculiar color actually reddening the bed of the river."

of the river.

of the river."
So far as we know at present all the fall-spawning, large-scaled (lateral line with 130 to 140 scales) salmon in the Columbia belong to this one species, although Dr. Suchley has made five or six out of it.
It is not impossible, however, that the "dog-salmon" (Salmo canis), and perhaps others of his species, may be something different.

something different.

Our expedition to this coast has been thus far very successful. We have already forwarded to the National Museum upwards of 2,500 pounds of specimens of fishes, representing about 200 species, thirty-five of which have been hitherto new to science.

DAVID S. JORDAN.

REMARKABLE FREAK OF A TROUT.—Vest Meriden, Comn., May Tith.—Editor Forest and Streum.—One of the most remarkable freaks of a trout that ever came to the notice of the writer occurred this week to Frank Stevenson, Jr., and George H. Wilcox of this place while trout fishing in a neighboring stream. Both were fishing in the same pool, with worms for bait, when the latter experienced a bite and immediately "struck," aparently sending the hook home, and he commenced reeling it in. In a moment his line slackened, and supposing it off, he began leisurely retrieving his line. While doing so Stevenson got a bite, and proceeded to land his fish. Mr. Wilcox, perceiving it was a large fish, dropped his rod and went to Stevenson's assistance, and with his aid it was safely brought to creel, but you can readily imagine the surprise of both, upon its being taken from the water, to find both hooks thoroughly imbedded in the throat of the trout, and both hooks and lines attached to their rods intact. So neatly both had captured the same trout at the same time, on two different lines. The trout was weighed on the spot, and touched the beam at a fraction over one pound.

at the same time, on two different lines. The trout was weighed on the spot, and touched the beam at a fraction over one pound.

It is supposed that the slackness of Mr. Wilcox's line, after he struck the fish, must have resulted from the fish having made a rush up stream as soon as it felt the hook, and as Mr. W. did not retrieve his line rapidly enough to discover that fact, supposed it off, and the fish being relieved from the pressure of the line, and being very hungry, was tempted to take the second bait. As the writer did not witness this himself, he would be loth to believe it did it not come from a thoroughly reliable source; but as I know both gentlemen to be truthful, I most cheerfully indorse their statement. Both lines were severed from their hooks, and the fish was brought home as above described.

A SIMPLE MINNOW NET.—Baltimore, May 8th.—As I hear so many hishermen complaining that they cannot get a net suitable to catch minnows, that is easily carried, I thought it might be of service to the fishing fraternity in general if I were to describe a net of my own invention that is easily carried in the pocket, can be adjusted in a minute, and has never failed to provide me with plenty of minnows. I take a bung or round block of wood of two and one-half to three inches in diameter, and bore four holes opposite to each other in the edge of it. I then insert a piece of umbrellar rib, about twelve to fourteen inches long, in each hole. The holes must be made deep and small enough for the wire to fit tight. The paragon wire is the best. I leave the end of the rib that has the little eye in it outside. I then lay the bung and wires on a square piece of mosquito netting, and stretch it and sew it firmly at the four corners to the eyes in the ribs. In the center of the bung I put a serew-eye, and in the center of the mosquito net sew a piece of string, leaving ends about eight inches long. Any straight, shiff sitck picked up on the shore serves as a handle, being made fast to the net by a strong piece of twine through the screw-eye, and with a piece of bread tied in the net with the string, and perhaps a small, flat stone to make it sink, it is ready to catch minnows. They will come over the net for the bread, and when it is raised up quickly, the resistance of the water causes it to belty, and the minnows will not get out. When bait enough has been taken, I pull the wires out out of the holes, drop the bung into the net, and roll it up on the wires.

St. Clair Flats .- Detroit, Mich., May 3d .- I think ST. CLAIR FLATS.—Detroit, Mich., May 3d.—I think your notice of sportsmen's resorts would be incomplete without a notice of our famous St. Clair Flats. Nowhere can the sportsman find finer tishing than there, or better or cheaper accommodations. Good boats, good punters and a first class hotel—the Star Island House, with rates but \$2 perday; very easy of access, and good fishing at the very door. The hotel is presided over by the genial Jim Slocum, who knows how to make one feel at home. The waters are broad enough for all, and will well repay a visit. I shall be glad to give any assistance I can. Address through Forest and Stream, Uno,

The Rennel.

THE NEW YORK DOG SHOW.

LIST OF JUDGES.

M ASTIFFS, St. Bernards, Irish water spaniels, clumber and cocker or field spaniels, fox terriers, bull dogs, buil terriers, pugs, dandie dinmont terriers, and Yorkshire terriers, and miscellaneous or foreign class: Hugh Dalziel, Esq., The Laurels, New Thornton Heath, Croydon, England.

Newfoundlands, Siberians or Ulum greyhounds, Scotch deerhounds, colleys, dachshunde, King Charles, Blenheim and Japanese spaniels, Italian greyhounds, black and tan terriers, Scotch terriers, skyes, and toy terriers: Dr. Gordon Stables, Surgeon Royal Navy, Twyford, Berks, England.

Fox hounds and beagles: Hon. John S. Wise, Richmond, Va.

Native English setters : S. T. Hammond, Esq., Springfield, Mass; Hon. John S. Wise with Hugh Dalziel, Esq.,

Pointers, imported English setters, black and tan setters, and red Irish setters: Hugh Dalziel, Esq., S. T. Hammond, Esq., Hon. John S. Wis

In despite of the postponement, the fourth annual New York dog show, which opened on Tuesday last, may be called a success as far as the mustering of the entries is concerned, and the general excellence of the classes. On Monday the dogs began to arrive at the Garden in goodly numbers, and by 10 o'clock Tuesday morning, the hour appointed for the judging to commence, there were comparatively but few absentees to be checked on the list. When the uncertainty of the coming off of the show is taken into account, the lateness in the season, and the hot weather of the past week, it is remarkable that there were not many empty pens. The arrangement of the stalls was entirely different from that of previous years, and a decided improvement in many respects upon the shows of the past. As we have already described all this in a previous issue, it is unnecessary to refer to it again. We believe, however, that the stalls for the large dogs are raised too high from the ground, and that a better view of the animals could be had if the floors were elevated only about eighteen inches. If this plan was adopted it would be more convenient for the exhibitors and less likely to injure the dogs by straining in taking them in and out. Many of the pens were draped and carpeted, several of them quite handsomely. Mr. A. E. Godeffroy, of the Neversink Farms, added to the attractions by having a large rustic house of unique shape erected at the west end of the garden, which was taste fully decorated with bear and deer heads, stuffed birds, and the furs of many of the American and European animals of the chase.

The attendance up to the time of our going to press has been exceedingly small, although there has been a fair sprinkling of the sportsmen of the country. The judging began at 10 o'clock each morning, and continued until 5.30 P.M., with an hour's intermission for lunch. We trust to be able to announce in next week's paper that the public has recovered from its fright and that the exhibition received the patronage it most certainly deserved. Until then we defer all detailed criticism of the

LIST OF AWARDS MADE UP TO WEDNESDAY NOON.

Mastiffs—Doos.—First, Charles C. Bull, Turk; second, Albert Hoysradt, Warwick; V. H. C., Dr. Albert H. Buck, Garm; H. C., Oliver K. Hand, Harold. First prize, \$20; second, \$10; third, silver medal.

Mastiffs — Bitches.—First, Albert Hoysrudt, Rab; second, J. M. Underwood, Queen; third, Richard Lehmann, Juno. First prize, \$20; second, \$10; third, silver width.

medal.

Mastiff-Pupples—Dogs and Bitches,—First, S. C. Hewitt, Brenda; second, R. L. Belknap, Venus; V. H. C., C. D. Arthur, Pluto. First prize, \$10; second, silver medal.

THE TRAINING OF FOXHOUNDS.—Pearisburg, Va., May 5th.—It seems to me that the foxhounds are very much slighted, as your contributors write almost altogether upon the subject of the bird dcg. I am a tyre in the breeding, rearing and breaking of hounds. I have been looking with an eager eye for something written on the proper mode of breaking foxhounds, how to improve their staying qualities, etc. Hope I may hear from some of your many readers who have had experince in something like a Virginia fox-hunt.

As the Nower are Superior in the formula of the control of the contr

As the Forest and Stream is read by many of the veteran fox-hunters of the Southern States, we trust that some of them may respond to our correspondent's re-

Sardis, Miss., April 10th.—Editor Forest and Stream:
—Having seen my first dog story copied in several papers, I thought I would give you another from the same source, but about a different dog. Since the death of the fire-making old pointer, another dog has become the associate of my friend, and he (the gentleman of whom I speak) was recently telling me how smart his new-made companion was. Last fall, when the birds were young, gentle and casily killed, my friend would go out once or twice a week and take Irby (his new dog) with him. He went so often that Irby got into the habit of coming to his office nearly every day for a hunt. Finally he called one afternoon, and my friend could not go; thereupon he informed Irby of the fact, but told him to call next day at 1 o'clock, sharp, and he would go with him. Irby went away sadly disappointed, and next day as my friend was sitting in his office picking his teeth and trying to think of some strong points in some of his law suits, and not thinking about Irby at all, suddenly in bounded the dog, almost frantic with delight, as much as to say, here I am, look at your watch. The promise was remembered by Mr. —, who upon consulting his watch found the hour was 12.5%; he turned to Irby and asked him if he wanted to go very badly. Immediately the dog gave a low whine, ran to where the gun was standing and then out in the street, and came to a dead point at nothing, stood a moment and then ran back in the office and took a seat by the fire until Mr. — could get himself rigged for the promised hunt. Sardis, Miss., April 19th.—Editor Forest and Stream at nothing, stood a moment and then ran back in the office and took a seat by the fire until Mr. —— could get

office and took a seat by the fire until Mr. — could get himself rigged for the promised hunt. This, like my other story, was told me for the truth, and I have no doubt but what 'its true, as my friend has not much of a reputation for "stretching the blanket," If he tells any more dog stories I shall surely entertain some fears for him. — CRICK.

A Suggestion to the Westminster Kennel Club for Forest and Stream: The sad and sudden death fr. William M. Tileston is a loss keenly felt by all knew him. Those who were associated with him in of Mr. William M. Tilestor is a loss keenly felt by all who knew him. Those who were associated with him in connection with the field sports to which he was so ardently attached, and for which he did so much through voice and pen and deed, will miss greatly his ready action, exhaustless enthusiasm and keen judgment. Gradually it will come to be recognized how strong and wide and healthful was the influence which he exerted upon those sports. It is nearly ten years now since I, together with hundreds of other of your readers, became requiring with Mr. Tilestor's deserted the gent the grant and the gent the second of the control of the second of the control of

together with hundreds of other of your readers, became acquainted with Mr. Tileston's pleasant pen, through the "Santa Monica" letters, which are yet recalled with interest; and the personal acquaintance that subsequently came about was of the same pleasurable character as that which existed between writer and reader in earlier days. Mr. Tileston was an open hearted, warm friend, a true and genial gentleman. To him the Westminster Kennel

Mr. Tilestou was an open hearted, warm friend, a frue and genial gentleman. To him the Westminster Kennel Club owes the high and recognized position it occupies to-day, when its exhibitions are unequaled elsewhere in the world, and attended by our very best people.

Mr. Tileston was passionately fond of dogs, and the points about them he did not know were hardly worth knowing. He was conceded by all to be one of the most fair and competent judges we have ever had, and he had equal ability to record his judgments for the aid of others. In his devotion to field sports Mr. Tileston spent much valuable time without remuneration, and often neglected to look after his own interests through his absorption in to look after his own interests through his absorption in He was suddenly taken away these matters.

these matters. He was suddenly taken away while at the place where he had been arranging for the forthcoming bench show, and his death by that terrible accident leaves a sorrowing widow and four young children with scanty means of support.

In view of that fact, I would suggest to the exhibitors of the Westminster Kennel Club show, which will take place on May 11th, the propriety of raising a subscription fund for the benefit of Mr. Tileston's family. I respectfully request a full expression of the views of the exhibitors upon this matter, and shall be heartily pleased to join with them in such action as shall worthily express our esteem for a worthy friend and our sympathy for his bereaved widow and children. for his bereaved widow and children.

very respectfully, GARRET NO. 1305 Fifth Avenue, N. GARRET ROACH

SOMETHING AROUT BREAKERS AND DOG BREAKING.

FIFTH PAPER.

THE dog should be taught, as we have already said, to obey the eye and the hand, rather than the A dog that will do so is invaluable in open grounds when birds are wild. But although we advocate a system of instruction in the first place, that will teach a young dog to quarter his ground with precision and take as much advantage of the wind as possible, yet we would at all times allow the youngster to make use of his discretionary instinct, and have a look for himself if he persistently shows any desire to reconnoiter any particular spot. It is a common fault with many breakers to think that they know better than their dogs the exact spot where the game is lying. Should the dog prove shy and refuse to beat, then an older companion must be made to show him the way, as most puppies have enough of the faculty of imitation to be led to follow. But after a few days out with the old dog, the youngster will have picked up enough of the idea of what is required of him, and then the old dog must be left at home, otherwise the puppy will fall into the habit of entirely depending on puppy will fall into the habit of entirely depending on his senior, and will do little else but follow at his heels. There is nothing so dispiriting to a youngster, one that cannot be expected to keep up with his much fleeter-field companion, than to see him always keep ahead and scent out all the birds. If this course is continued he will soon show a disinclination to hunt, as his natural cunning will teach him that it is of no use. From that noment you will possess a very uncertain animal, on whose working you can place no dependence, and who will beat or not, as his humor suits him. Should a rubbit start up, and the puppy show the least signs of giving chase, at once administer a severe rating, and have recourse to the whip. In case he should prove so unruly that he pays no

attention to the whistle, wait where you are until he has had his run out, and when he returns panting and gen-erally demoralized, lead him to the exact place from erally demoralized, lead mm to the exact place which the bunny moved and give him a scund flogging, which the burny moved and give him a scund flogging, and make him stay at charge until you see that he has cooled off and come to his senses again. Reprove him in this way on every repetition of the fault and of noticing anything that is not game, and he will soon give up working on a rabbit or a small bird. It is necessary to warn you to be careful not to interrupt him whenever he appears to be wireline tisker. necessary to warn you to be careful not to interrupt him whenever he appears to be winding birds. Give him time to locate them. Like every other faculty, his sense of smell will improve as he is given exercise and gains experience. Do not, however, allow him to contract a habit of puzzling with his nose to the ground, but urge him forward, and make him look elsewhere. He will then raise his head and eatch the scent of other particles and more or less directly appreach his game. Should he then crowd on too quickly check him by the word "careful," but still allow him to go on; he will then stop hesitatingly, draw forward and put-up the game. Now is the time for you to come in with the command "toho," which is quite uscless and sure to be disregarded if adopted before the disnosition to point is shown in some slight.

time for you to come in with the command "toho," which is quite useless and sure to be disregarded if adopted before the disposition to point is shown in some slight degree. From this time forward common sense will teach you how to act toward your dog. The youngster will either need encouragement or restraint. If the former, your task will be by far the most difficult one, for you will, to some extent, be obliged to let him run riot on the haunt. After that enjoyment the example of a steady dog will be of benefit in toning him down.

If you find your dog, from excess of delight and exuberance of spirit, less under general command than when his imitatory education was going on, and that he does not "toho" steadily at the exact spotat which you order him, at once attach a check-cord to his collar. It will diminish his pace, and make him more cautious and obedient. The moment you see him begin to feather get up quickly, without running, to the end of the cord; check him suddenly, at the same time saying "toho," if you are satisfied that game is before him, and that he ought to be standing. He will then come to his point, on which you must keep him. Encourage him to stand firmly. Go quietly alongside of him—pat him—drive a peg in the ground and tie the cord to it, then walk in front of the dog and move the game yourself.

Fointing is the natural instinct of the well bred dog, nd should your puppy be the offspring from a line of eld dogs you will have less trouble to make him stanch field dogs you will have less trouble to make him stanch than if his parents depended solely upon their records on the bench. We advise all dogs to be broken on game, not on little birds, for if this course is pursued, it will give the double trouble of having to unbreak them later on, and very probably ever afterward a desire will crop out at times, especially when the dog becomes tired or unwilling to obey, to point larks, small birds, mice, etc. There is nothing gained by training a dog to point anything else but game, as the less he knows of other birds the better.

There is nothing gained by training a dog to point anything else but garne, as the less he knows of other birds the better.

The owner of a dog cannot shoot over him too often to give him experience. Insist upon his being stanch. Neverallow your dog to secape punishment when he deliberately flushes his game. But always be sure that the birds were moved by the dog and not by their own inclination or the noise of your own talking. A stanch pointing dog is invaluable, as he can be taught to stand with birds fluttering up and lighting down in open sight without moving a muscle. Snipe often act in this way, as, in fact, does all other game at times. When the birds are acting so your dog should not press forward one step, check him if he does, and punish him if he persists. The teaching him to "drop to wing," that is, to charge whenever he sees or hears a bird rise, with the provise that he is not pointing at another bird, we can strongly recommend as a sure means of correcting the least unsteadiness. This plan will prevent his getting into a habit of blundering up birds, and cunningly pretending not to have noticed their escape.

We have already urged, in a previous article, that a young dog should be broken to drop to shot; it is therefore unnecessary to go over the ground again. This method, if at first adopted, will prevent his over thinking of running in, but should he ever acquire that villainous habit, it can be corrected by means of a check-cord, as already described.

Presuming that your youngster has found a bird, has pointed it stanchly, and that you have killed it, and he has charged as he should, it is ther for you to teach him how to go to the bird without wasting time, and to retrieve it in style. There is a deal more in this than most breakers think. You want to have your dog go straight to the bird, and with as little circling as possible; pick the bird

has charged as ne should, it is then for you to reach him how to go to the bird without wasting time, and to retrieve it in style. There is a deal more in this than most breakers think. You want to have your dog go straight to the bird, and with as little circling as possible; pick the bird up in his stride, or while moving; return to you and sit up with the bird in his mouth, with his head inclined upwards. To stay in that position till you say the word "loose," and not let him move until you have pocketed your bird and are ready for another rise. To do this, go to the dog, take him by the collar, and while repeating the command to "fetch," lead him to the lowward of the bird. Release him and allow him to pick it up, step quickly back to the place where you stood when you shot, and call your dog to you. Do this unfailingly whenever you see that the dog shows any inclination to rush blindly forward to retrieve, depending in a general scouring of the country to find the bird. The dog handled in this way will, even at down charge, soon drop into the habit of correctly locating the place where the bird has fallen. All dogs, properly handled, can be taught to retrieve handsomely, and when bad ones turn up, it is the fault of the breakers, who are either inpatient or very poor markers.

We now come to the mooted question of whether a dog should or should not be broken to point his dead birds. Our experience has shown us that as there is a difference in the scent of a dead, wounded, and an unwounded bird, we cannot see why valuable time should be wasted in having the dog point a bird that he knows is in a condition to be retrieved. Dogs that point "dead" are apt to become hard in the mouth. While waiting to receive the command to fetch, they prepare themselves for a spring, and upon being ordered on they pounce upon the bird, which they are apt to crush in their naturally powerful grip. A dog is less likely to mount a bird while in motion than when standing still; therefore, if he be allowed to go to the bird in an orderly manner, pick it up, and return without stopping where the bird fell, much time should or should not be broken to point his dead birds

will be saved, and the dog's ardor will not be dampened by unnecessary restraint. The plan of making a dog point dead has this evil consequence, that should he, when searching for the dead bird, come across and point, as he ought, any fresh game, on your telling him to fetch it, as you naturally will, he must spring forward and flush it, if he autompt to obey. Surely, this would tend more to unsteady him than the manner we have recommended o have him broken. Moreover, if you teach your dog to "point dead," you at once relinquish surely, unnecessorily, all hope of ever seeing him pick up, one by one, a scattered besy of birds, or witnessing the fine display of sagacity and steadhess required in such a performance.

There are many dogs to which it seems natural to be hard mouthed, and almost impossible to check by means of the whip. If, therefore, you find such a customer, the quickest and easiest way is to teach kin to retrieve the bird by the wing or head. This is easily done by means of a dumny stuffed bird, prepared with sharp pointed wires in its body. As dead birds frequently lodge in the branches of bushes or get caught in the briers, it is well to now and again drop one on the top of a high log or stump, and thus teach the dog to look for his birds also in high places.

When, after a few weeks, you find that the youngster has confidence in himself, and is likely to lunnt independently, take him out with a well-broken dog that is not likely to make false points; for if he commits such mistales, your pupil will soon utterly disregard his pointing. Select one also who draws upon his birds in a line, determined attitude. By selecting a slow old dog you will probably diminish the wish of the young one to follow him. On the old dog's pointing, catch the eye of the young one, call to the old fellow by name, telling him to 'toke.' The order will make the young one look round, and awaken bim to a suspicion of what is going forward. Then, carrying your gun as if you were prepared momentarily to fire, retreat, or mo

sin from illuding his game, which he might do while in the act of jumping over.

Althought the foregoing instruction has been described as being carried on in the open, the same directions are to be carried on in the cover, only observing that the dog should not be allowed to range out of shot of the gun. A method often practiced when working a stubborn wide ranger in the cover is to attach a small bell to the dog's collar; the ceasing to hear its tukking being the warning to the sportsman that his dog is pointing game. We merely recount this as one of the ways at times adopted for changing a badly broken animal into something like a useful one. The best way, however, will be to boil these articles down to suit your own case, and by constant companionship endeavor to make your dog as intelligent an animal as possible.

KENNEL NOTES.

NAMES CLAIMED.—Bessle—Mr. Fred. Masten, of Buffalo, N. Y. claims the name of Bessle for his liver and white ticked cocker spaniel bitch, by Mr. Charles Battey's Con, out of Mr. J. B. Har-

BOW SHOOTING IN NORTH MINNESOTA.

TEN years-years full of fun and adventure-has the writeren doyed that noble and most witching of all pastimes-archery half of this period, 'tis true, was during boyhood, yet not after the boy's usual method in bandling a bow, nor with those crude the ony susual method in handling a low, now with those crude implements made of supings or limbs weak enough to pull with the thumb and finger, and called in rustic parlance a "how "n arrer." The writer used a weapon of English patiern, and his preceptor taught him how to draw after the manner of the English, besides grace in attitude and every acquired elegance in form; also the holding of the how perpendicularly, and loosing immediately mean child laws. After the interval of the control of the form; inso the forming of the low perpendicularity, and rossing immediately upon a full draw. After two or three years of tul-tion he could bring down game, and killed large numbers of squirrels, birds, muskrats, besides plumping over chipmunks and the smaller fry generally.

The writer during the past decade has resided in North Minn The writer during the past decade has resided in North Minne, sota, doing duty as surgeon and practitioner, and while not busly engaged in prescribing the pollets of Esculanius, has devoted his leisure hours to how shooting, both in the hunting of wild game and also at larged practice. A band of Ojibway Indians, located at their reservation, which is in the immediate vicinity of our frontier town, hasafforded the writer a chance to study archery as it exists among red men, who are but deprayed and degenerate representatives of the native abortignes. Yet withit some are not unenviable experts in bow shooting, especially at the horter represe. Sevend thirty-flav, varies how are not such that. ranges. Beyond thirty-five yards they are not so reliable do not know that the cock feather, when turned to the right, will

do not know that the coca teather, when thrived to the right, will throw the arrow out of line.

The writer remembers one stalwart descendant of the great Pontiac who would have excited the admiration of every archer rpresent at the Chicago tearneament, cauded they have seen him not only for bis unusual poise and aplomb and masurpassable beauty of physique, but for his swift, easy, steady, unwaying action in drawing and loosing. This Ojibway athlete could equal the writer at the short ranges, but would have been compelled to accept second place when competing with him at any distance exceeding fifty vards.

The indians have a custom, in practice, of shooting a pointed arrow into a dead limb, thirty or forty feet from the ground, and then spring it out by using blunt-headed arrows, which when striking close beside the other does not fail to unloose the target shaft. The feat is to dislodge it at the first fire. If the first treher falls, he gives his place to another, and so on until the shampion brings it down. Gambling is common with them. The writer has been almost alone in his favorite pastime. Until

ast season, when by the newspapers and magazines people say that the English game was becoming popular, he could not be seen with his bow and quiver without being stared at as an object of questionable curiosity, to say the least. Finally two or thre-gentlemen procured bows, and a lady or two, though no one followed the pastime with interest sufficient to render them experi lowed the pastime with interest sufficient to render them expert at any distance, nor did it enable them to join with the writer in anything like even practice. Indeed there was danger of being jeered by the rough and vulgar. Only a whizzing shaft can most emphatically dissuade a tipsy moddler from such demonstrations. And here it may be said—in the experience of the writer it is true—almost invariably can you measure the mental califier of a man in his like or dislike of the now material pastime. If he has enjoyed social culture, and[s] intellectually refined, and is at all resthetic in his tastes, in the degree that he is so will be his each turns of Mirit. Muir.

This leads to a word about the exclusiveness of the National Archery Association's rules. Why should may archer be excluded, after paying his individual fee, when applying for a chance to compete for the prizes?

chance to compete for the prizes?

Now, the writer has had no opportunity to belong to any club, and he is led to believe that many expects could be found among, men who have lived two score years, more or less, on the "rug-god frontier," or were, perhaps, "on the rough border born," or an old mountaineer," who can speed the shaft with the lost—who would be well pleased to be present in Buffato next July. In California they are making arrangoments as they should be. Let the officers of the National Association emulate them in that therein a can be also should be the provisions shall ever allow the entrance of an ele-ment that may prove preduction in the host interest of my or. nent that may prove prejudicial to the best interests of any or

and an imay prove prejudicial to the noist interests of any or-ganization of true and carriest archers. Relow is recorded the best score at the Double York Round that the writer was capable of making, up to Nov. 1st, 1879'. Since then the snow has been too deep for such long-range shoot-ing, and practice has been kept up at forty yards. Score:—

| Arrows. 144 164 43 | Fords. 100 80 60 | 11its. 97 92 47 | Value. 3 5 Už | Tota 201 460 305 |
|-----------------------------|---------------------------|--------------------------|------------------------|---------------------------|
| | | | | |

However apocryphal the above may seem—the writer has infered that he is alone almost in practice—he can prove his points

At thmes speciators have been present, Besides, he has shot igainst rifle experts, and those who are not tyros in using the navy revolver. Shooting against the former at the equivalent point-blank ranges, with the latter at the same distance, viz., forty and fifty yards, winning in almost every trial with either of the above mentioned weapons. In this remote frontier town the above mentioned weapons. In this remote frontier town the stock to draw from in forming a troupe of enthusiastic toxophilities is meager indeed. Probably in time there will be several who may attain to a medium degree of proficiency. The above score, it will be seen, necessitates the use of "four figures," Not a few times did the writer full to reach their neighborhood, sometimes wanting a score or so to know them; again, solicy beyond 1,000. A bow was used which pulled a little less than fifty pounds; arrows were preferred weighing four or skx, and four cume flest when rigid enough to endure the recoil of the string, as the string, when loosed, passes its own linelyhile air rest, when braced—by two lineless or mere at the center—for every inchit throws by two inches or more at the center-for every inch it throws —by two inches or mere at the center—for every inch it throws the arrow out of line. Any one can see this by experimenting. Arrows lighter still would be better, but they could not endure such a violence of recoil. Could the arrows pass a hole in the exact center of the bow (an impracticable action), they would be subject to no strain whatever. Here is a point, with many others now agritated, which human langenuity can never displace. So, too, the proposed changing of the target figures. So long as the periphery of the target shall seem to decrease with increase of distance from the archer's eye, just so long will it be impossible to get a target whose face shall be proportionably suitable for all ranges. The champion of last summer's tournament must be correct in this, as be is logical and far-seeding in party every all ranges. The champion of last summer's tournament must be correct in this, as be is located and tra-seeing in nearly every other polar advanced, though opposed by current and worthy gentlemen who have a right to be heard. When we of America become the equals—when we can excel the heat English clubs—and can command our excellence without dancer of defeat, then, and not not litten, let us, for any reasons yet urged, change our valuations. When that time shall arrave, who can doubt but that each and every generous Briton among the gentlemanty roxonhilities of Albion will hasten to follow us without a protest.

North Minnesota is the sportsama's paradise. There are rush-lined lakes and winding streams. Localities abound where you may ind the multard in his hanta, and only you know about it. Here can you enjoy the linest Indian summer; and on the edge of some woodland tarn, or pratific lake-fice liels, ist and hear the quacking of water fowls by myria-ls, and the low, mullied thunder of blackbirds swooping down in unitions, and the note of the note of the note of the note of the note of the note of the note of the note of the note of the note of the note of the note of the note of the content of the summers and the note of the content of the sum of the note of the content of the note of the note of the note of the note of the content of the note of the content of the note of the content of the note of the content of the note of the content of the note of the content of the note of th

quacting of water fowls by myraids, and the low millied thun-der of blackbirds swooping down in millions, and the note of the great blue heron; and that sub-bass note, the watery sounding pump-stroke of the marsh bittern. About twelve miles north-west, and northeast of this town, all the long autumn, can be heard the honking of the wild geose, where thousands come to feed in wheat fields and fallow land.

More delicious Indian summer days can be found nowhere, Grouse used to be abundant; but that merelless slaughter called sport, in which scores of pot-hunters, armed with double breech-loading shot guns, aided by trained setters, carried on each senson, has so decimated them, that, in the not far future, this sportsson, has sourcemanned from the unit of the first first first possible many's king of all wild love trend; in the upland will be a thing of specific Tas writer-has killed over twenty the varieties of wild duels, and lound many other kinds. The one most abundant are mallards, and the brown scaup duck; golden and dark incount-black by overhead between suddown and dark in count-Black ducies by overneed between sundown and dark in count-less flocks, but none are larged unless taken on the wing. That is difficult, for they fly high, and are very rapid on the wing. No one seems to know where they pass the day, as they are not killed with other ducks on the usual grounds hunted over for water fowl. Wood ducks are quite plenty in September, and archees would find good chances to take them along narrows

winding, rush-lined streams.

One October day, with a companion, we remember coming upon a group of herons, twenty or thirty in number, in a lonely upon a group of nerous, twonty or thirty in number, in a lonely spot in the great northern forest that stretches away to the far-off Hudson Bay country. They were standing around a pool of dark, clear water, having a companionable time of it. The surface and the surroundings did not afford a chance to get within bow shot, without taking more pains and trouble than two tired hunters cared about, and they all made off in safety. But they were the largest and most formidable looking fellows we had ever were the largest and most formidable looking fellows we had ever seen. Did they but know their force in offensive tacties, they could have made it intensely interesting for us. An Indian was killed by a so-called sandhil crane in an instant, with one thrust of bis sharp bill, which pierced through the cyclail and reached the substance of the brain. A neighbor of ours once wounded a white heron, and pursued the Heing bird. When the heron saw white heron, and pursued the Heeing bird. When the heron saw that his enemy was gaining upon him, he turned sharply about, and came directly for him. His fine neck was arched for a blow. His liquid eyes glittered with a soft, yet deadly fire. A thrust with that long, hard, polished bill would equal a blow from a pondard. When neighbor W. felt the situation, he raised his gun, estimating the chances with a degree of trepidation not inconsiderable. But his blow was fortunate. It hroke the bird's neck, and closed the singular contest, which was not without a touch of the ludicrous. Throughout this region and northward, the water fowl come

Throughout this region and northward, the water fowt come to breed. They remain here until winter drives them southward. Wild rice abounds everywhere. In the spring time sheldcakes (Mergus americanus) are plentiful. Once, a male, was kilted a year ago—a beauty, by the way. It was just past molting. The body underneath was of the richest cream tint. The head, liver color, and glossier than burnished bronze. The slate wings and back were pencified as delicately as nature ever does her work. The upper neck was deep marroon. Those faded specimens shot during the full months show but poorly when contrasted with the governously plumaged king of all wild dack kinds. He weighed mure by eleven ounces than the largest redshead or convenience. more by eleven ounces than the largest red-head or canvas-back

more by eleven ounces than the largest red-head or canvas-back ever taken in this country. The writer struck a crow with a blant shaft severity yards away. The favorable element of chances often affords an archer much pleasure. A wing shot we desire to record in concluding this paper. After striking down a few fine birds over the decoys, the writer posted himself to await the duly flight of black ducks. Long, low masses of clouds lay above the horizon bar, cardinal and gold at their edgs. While the day or had been down nearly an hour. Cool, sweet breazes breathed softly from the dusky mendows, and gar-witching echoes of thoust blues canne from the an hour. Cool, sweet breazes breathed softly from the dusky meadows, and ear-witching echoes of forest bids came from the bordering woodlands. The whistle note of the widgeon followed the riverrunning hard by. It was a solitary spot, remote from rural ways—every surrounding approved by each wild water-fowl. Throughout the season ducks never fail to fly across a certain neck of hand, and the archer or rifleman has but to wait for the first hints of gathering darkness to get a shot at the honor returning flocks. Even after a successful day among the decoys a shot upward to close the day with is never omitted.

After patiently watching a full hour after sundown—they are

After patiently watching a full hour after sundown-they are slow in starting to-night—the first half dozen whirt by, well down, but too far to the right. The flight once begun, there will be hundreds before its over. They sweep past when it is so dark you cannot see their outlines. Presently, a shadow well ahead

indicates that in a moment more the supreme chance will pres Up goes the bow hand, the shaft is ready for the swiftest ent! Up goes the bow hand, the shaft is ready for the swiftest damw an archier ever makes, and perhaps the most perfect, both in the draw and loose. We have watched a fellow archer in design it. The clumsiestare graceful then. The long deep line of coming birds are overhead; they reach out right and left; they enver fifty yands from front to rear. Left drive: a shaft going up among them may find a way through, as in the "many holes in a "skimmor" seven times in ten usually does; but tonight it plumped itself through the breast of a handsome mate. How over here there when he fells with a though the through the press of a handsome mate. prompted itself through the breast of a handsome male. How overy nerve tingles when he falls, with a thud, as though weighing fifty pounds avoirdupois! "Tray," the liver and white pointer, picked him up and brought him to his master's feet, as proud and happy, and equally as eager for a tid-bit from the Eavery breast when both reach home. M. D. Tatest Man Mark Markel him. Detroit, Minn, March 10th.

ORITANI ARCHERS.—Hackensack, N. J., May 1st.—The Oritani Archers held their third annual meeting, May 5th. The following Archers held their third annual meeting, May 5th. The following officers were elected: President, Wakeman Holberton; Vice-President, Mass Hattle Van Beskerck; Secretary and Tressurer. Irving Wood; Executive Committee, in addition to the officers, Miss S. C. Hopper, Mrs. W. Holberton. The President reported in substance as follows: Active members, 31; club free from debt, with a balance on band; number of challenges sent out, 4, none of which were accepted. The club will hold practice meetings twice a week, and a monthly meeting for ladies' My. HOLBERTON. W. HOLBERTON.

NEW YORK ARCHERY CLUB.-The New York Archery Club have creeted their tents on the Lawn at Central Park, and prac-tice there every Tuesday, Thursday and Saturday aftermoons The club and its belongings make astriking addition to the seen evy of the Park. The picture formed by the tents, targets, gay pennants and the archery dresses of the contestants is picture. resome and beautiful

The club give a concert next Monday evening, tickets to which may be secured of the President, Dr. A. B. De Luna, or of the Secretary, Mr. Jas. W. Auten, Jr., 127 Pearl street, New York.

YOUNG AMERICA VS. MERION.—The first really important match Young America ex Mericos.—The first really important match of the scasson came of it at Stenton, Phila, on May Sth, between the first elevens of the above named clubs. Only one finings each was played, the game resulting in the victory of the home club by 237 zms. The play was commenced promptly at 11 o'clock, and Captain George Ashbridge having won the toss decided to take the innings. The two Isallys, however, were the only two of the Sterion team to make a stand, and the innings closed for the small total of 12. Dan Newhall and Baird were the first Young Managley attains as the southed the small cotal of 12. Dan Newhall and Baird were the first Young Managley attains as the southed the small cotal of 13. America, tastmen, and they settled all doubt as to the issue of the same, by running up the score of 61 before they were parted. It is unnecessary to particularize each individual play, but a sturpendous smite to leg, for six, over the fence by Van Renssalaer, and the fine bowling of Law deserve special montion. Annexed

season, Mr. D. J. Izaard, Secretary.

SARNIA CRICKET CLIU.—At the annual meeting of this Cundian clab, held April 17th, the following officers were elected, Honorary President, Hon. T. B. Pardec; Honorary Vice-President, Mr. Julius H. Bucke; Vice-President, Mr. John H. Jones, P. L. S.; Captain, Cavondish Nevilo, Treasurer, E. B. Walker; Secretary, Fred. Kittermaster; Management Committee, Mossas, Parker and Sibson, together with the officers. Honorary Members—Messrs, John A. Mackenzie, T. Gleeson, R. Girdlestone, Geo. Leys, E. R. Jones, J. F. Lister and Dr. Possesteri

THE LINDSAY SCHOOL CRICKET CLUB held their annual meeting THE LINDSAY SCHOOL CURGET CLUB held their annual meeting on Tuesday evening, when they organized for the coming season and elected the following officers: President, W. E. Tilley, M. A., Vice-President, B. S. Wanstone; Second Vice-President, B. Gulligan; Secretary, R. J. McLennan; Tressurer, G. A. Irwin; Managing Committee, D. Hampton, W. Smith, C. J. Logan, G. Bigelow, W. H. Dean.

TRINITY COLLEGE SCHOOL.-Fort Hope.-At a meeting of the T. TRINITY COLLEGE SCHOOL.—Fort Hope.—AT a meeting of the T. C. S. Cricket Club, the following officers were elected: President, Rev. C. J. S. Bethune; Committee, Messrs. Wood (Chairman), Perry (Sec.-Treas), Rioberts, Major Jones, Broughall. Matches have been arranged with Trinity College, Upper Canada College, Whitby, Cobourg, Peterborough, and Port Hope.

THE CRICKET CLUB OF MOUNT FOREST.—The following officers where recently elected for the coming season: President, J. F. Fleids, re-elected; Vice-President, W. H. Kingston; Secretary; Treasurer, R. J. Hewat; Managing Counnitice, Messrs. Fielde Kingston, Hewat, A. Lamont, J. H. Coyne, S. A. Dunbar, H. Yarlett, C. O. Connolly, and F. Pickering.

-The Hastings Club, of Canada, has organized for this year Mr. H. F. Sharpe, Secretary.

Our Letter from the West.-St. Louis, May 8th.-Cricket out

Our Letter firm the West--St. Louis, May 8th.—Cricket out here is, if anything, botter than one would expect. The Mound City boys are not only willing, but anxious to play any body or every body of cricketers they can got anywhere near. Unfortunately, however, there is no club nearer than Springfield (about 250 miles from St. Louis), and that organization is not a strong one; consequently, the cricketers in this city have difficulty in getting any matches unless they play club ones. They opened the season on St. George's day, Friday, April 254—English ex.All-comers. The Britishers proved the slayers by a score of 72 to 68. doubtless being patriotically inspired by the day. The Mound City Cricket Club is fortunated in having for its president such a true Cricket Club is fortunate in having for its president such a tru lover of the game as Mr. Geo. F. Neil, of Crystal City. The club will loyer of inegamous art Geo. F. Neihot Crystactory. International increase in numbers as the season progresses; what it needs, however, are matches with outside clubs. Mr. W. H. Clambers has therefore entered into a correspondence with the secretary of the Chicago Club, with a view of having a match sometime

of the Chieago Club, with a view of having a match sometime during this month. I have conversed with several of the members and they seem to think it the duty of the old St. Georges of New York to come out here and play them a return match for the one they lost in 1873—only seven years ago. Int I tell them the "Old Georges" are getting "thrown," hone or less, every season—and rather more than less, of late years.

Treloar, one of the best cricketers in St. Louis, is now on his way to England with Miller's Northwestern Team, and is expected to uphold the reputation of this city. The M. C. C. have an excellent ground in Grand Avenue Park, which they rent from year to year at a very reasonable rate; but are anxious to secure a permanent one. Some of the "old-une" inquired after "Giles, the steady old hoss," of the St. Georges, and wish they land him back in St. Louis; but the club's expenses are rather heavy, and, as the members only number between 93 and 100 times. heavy, and, as the members only number between 80 and 100 cinneary, and, as the memoris of a future to exercise gian to (including 40 active ones), they intend to dispense with the luxury of a "pro" until a more convenient season. The Forker and Stream is beginning to be known as a cricket paper out here, and its columns much liked.

Notes.-Central Park has a new attraction, the tents of the New York Archery Club.

The description of bow shooting in Northern Minnesota, published elsewhere, will be found entertaining to the general reader, as well as to the archer.

We shall soon lay before our readers the plan of a fall campaign among the mountains of Virginia, which promises to be an admirable opportunty for sport and sightseeing combined,

Northern Michigan will be one of the most popular sections of country visited by sportsmen this summer. have again and again referred to its rare attractions for the sportsman tourist, and we are glad to see that these attractions are becoming better known.

Among those who called at our office during the past week were : Mr. John H. Kimball, Bath, Me., President of the Oquossoc Angling Association; Mr. George D. Macdougal, of Montreal, Can.; Mr. H. B. Roney, of East Saginaw, Mich., Secretary of the Michigan State Sportsmen's Association; Capt. C. E. McMurdo, of Elvington, Va.; Mr. John Davidson, Monroe, Mich.; Mr. G. C. Richards, Chelsea, Mass.; Mr. S. T. Hammond, Springfield,

If we were to gather a convention of anglers we should take particular pains to insure the attendance of a goodly number of men with silvery hair. An angier is always entertaining when discoursing on his favorite pastime, and the older a man is, the richer store has he of memories and reminiscences. If you are a young man, and want a companion for your fishing tramp, get the company of some genial old gentleman; then you are sure of having a pleasant time, whether you bring any fish home or not,

We are in receipt of a series of three articles descriptive of Nepigon trout fishing, the first of which will be published next week, and the same number will contain also the first of a series of practical articles on black bass fishing, prepared for this journal by Dr. J. A. Henshall, who is facile princeps as an instructor in this branch of angling. With the trout and the black bass we shall not forget King Salmon. In short, the coming numbers of the FOREST AND STREAM will be of special interest to anglers.

THE TRUE HISTORY OF ALASKA GOLD MINING.

SITKA, ALASKA, Feb. 22d.

Editor Forest and Stream:

I promised you, in my last, an authentic history of the discovery of gold-bearing ledges in this vicinity, and of operations connected with them. To enable myself to carry out my promise, I have held interviews with Messrs. Helstead, Doyle, Mahoney, Haley, Sam. and Alex, Milletich and A. G. Cozian, all of whom have been more or less connected with the enterprise from its inception. I have read and examined records, deeds, contracts and letters, and believe that from the immense mass of information I have obtained, I can, by leaving out all history of disputes, be able to give you the history of the enterprise in condensed form. Each of the above men know more or less, but none know all of the story I shall tell you. All are well-known in this country, and their statements, many of which have been confirmed, are worthy of credit.

In the beginning, the Russian Fur Company had a contract by which they controlled this country, the Russian government retaining the right to take from them the control of any land in which mineral deposits were found. This will account for their hostility, if it did exist, as is here asserted, to prospecting in search of minerals, and to any enterprise which would tend to lessen their power or revenues.

From time to time reports were brought in from the mountains by Indian fur hunters, of marble quarries, and one such quarry was actually found and examined in Nagnashonskay Bay (about fourteen miles from here to the north and west). Very little attention was paid to these rumors. In 1855, the Russian Government sent an engineer officer named Darvehan to examine into the mineralogical resources. He spent two years in Alaska, visiting Kodiak, Cook's Inlet, Cross Sound, Peril Straits, Whale Bay, and most of the Aleutian Islands.

While in Sitka his time was principally employed, so say my informants, and from my experience with what is left of Sitka I can readily believe them, in the more agreeable pastimes of dancing and feasting, and very little was given up to prospecting. He never visited the range of mountains on which are situated nearly all of the ledges which have since been discovered. His report on the mineralogical resources was unfavorable, and from that date, 1858, to the date of transfer, 1868, nothing was done. The Russian Governor kept strict discipline, and no person was permitted to go into the interior. Mr. Helstead, a Swedish engineer, who is now employed running the Stuart mill, is my informant up to this point. He says that the Russian engineer, while prospecting the mouth of a creek which empties into a bay, which is now known as "Silver Bay," found some pieces of detached quartz known as "float," but did not prosecute the search for their origin.

In 1871 a soldier named Doyle discovered the first ledge of quartz known to exist in this vicinity. Mr. Sam, Milletich, a saloon-keeper, having heard the various rumors as to the existence of marble mines in the mountains, which, brought in by Indians, were more or less prevalent among the Russians, and passed on to be camp gossip among the soldiers, and knowing also of the indications found at head of Silver Bay, in the shape of "float," employed Doyle, a discharged soldier, to go on a prospecting trip. Doyle landed on the south side of Silver Bay, and on Round Mountain discovered a stringer of quartz. Subsequently, in the same employ, Doyle prospected Indian River, a creek about a mile to the eastward of Sitka, and found on its east bank a stringer of auriferous quartz, which Milletich undertook to develop, but it proving very narrow, and not rich, very little work was done.

Early in the spring of 1872, Messrs. Doyle and Frank Mahoney, both of whom are now here, and have furnished me with the information, resolved to prospect the creek which empties into Silver Bay. Fitted with pans and otherwise for placer work, they did so. Following up the creek to where it forked, about half a mile from the bay, they took the western branch, and washed out many pansful of the debris found in the crevices of the bed rock, finding in nearly all of the pans a very small quantity of free gold; not enough to pay. Coming down the stream, they discovered on the eastern Dranch the outcropping of a quartz ledge, which is now recorded as the "Haley and Milletich." They were unprovided with tools to break into it to any extent, and contented themselves with washing out "over a hundred pansful" of the adjacent soil, finding no gold. The ledge was composed of white and barren-looking quartz. and they concluded that it was of no value. They pro cured, however, a few pieces of rock and returned with them to Sitka. The rock was not assayed and they lost track of it, but I have been able to trace its disposition. This rock started Nicholas Haley.

A history of the progress of mining affairs in this vicinity becomes, to a certain extent, from this point an autobiography of Nicholas Haley, the soldier, prospector and miner, who has done more than all others toward developing the resources. In June, 1873, Haley, then a

United States soldier, arrived at Sitka. Soon after arrival he saw the rock brought in by Messrs. Doyle and Mahony, which was lying in the saloon of Mr. Sam. Milletich. He having had considerable experience in quartz mining, detected at once certain indications in the apparently barren white quartz which led him to believe that the rock was gold-bearing. Here and there were specks of black sulphurets, which contained specks of gold, so small, however, as to hardly attract attention. The specimen marked No. 1 in the collection I send you is of this character, and with a magnifier you will detect the gold.

Ascertaining from Doyle the approximate locality, he, accompanied by two of the officers of the post and a soldier named Ingard, started on a prospecting tour. The two officers camped at the head of Silver Bay; the two soldiers went on up the mountains-no easy task without a trail, as I judge by my own experience over what is considered a good one, since built. On his way to the "Haley & Milletich Ledge" he discovered, lower down the ravine, another, now known as "Bear Ledge," from an adventure of his with a large bear in the vicinity, during which, although he killed the bear, he got badly mauled. After thoroughly examining the vein, then known as the "Upper Ledge," he returned to the head of Silver Bay next day, and reported that in his judgment it was valuable. The party returned to Sitka without further work.

In the following December, Haley, with the same soldier and a working party of Creoles, again visited the ledges, having been fitted out by the officers, who thus acquired what is termed in miners' parlance a "grub stake" in his Having a ten days' leave of absence, nine were devoted to clearing away the trees and turf, and exposing the surface of the ladge, which proved to be "about eleven feet wide, between well-defined slate walls, trending northwest and southeast, and having near its center a seam of iron sulphurets about a foot wide," On the ninth day the first blast ever made in Alaska quartz was exploded, and from the rock thrown out and broken up by it about sixty dollars' worth of free gold was obtained.

Returning to Sitka on the tenth day, the sight of the gold convinced the officers that they had struck a good thing, and two or three days after they, with Haley, went to the ledge, and posted the necessary notices of claiming. On return to the post a company was at once organized, composed of United States army officers and Haley, and the latter, with a working party, returned to the ledge to develop it.

On Christmas Day, 1872, Haley with a companion went prospecting, and about a quarter mile higher up the caffon discovered another quartz ledge. Haley having his name on the ledge below, and not certain but that the newly found one might be an extension, posted a notice in the name of his companion, a soldier named Ingard, claiming

In the spring of 1873, Ingard having gone East and abandoned his claim, Haley assumed possession, and informed Major Stewart of the find and its location, and with Haley's consent Major S. took the necessary steps to claim the ledge in his own name, which it now bears, and an extension was at the same time claimed by Messrs. H. Clay Wood and Alexander Milletich, and the various claimants and parties interested, viz., Messrs. Stewart, Haley, Milletich, Cozian, Mahoney and Prince, organized a company to develop the mine; their copartnership deed dated May, 1873. Thus, in 1873 two companies, owntwo mines, existed, both formed ing of Sitka and army officers. And up to this date it is very positive that no "attempts had been made to float worthless stock." The owners, all men in moderate circumstances, put in what they could afford to examine nto the value of their property.

During 1873 the officers interested in the Lower Ledge having gone East, and abandoned their claim, it was left with Haley as sole owner, and Mr. Samuel Milletich bought in a coöwnership with him. After various vicissitudes this ledge was in 1877 sold to a San Francisco firm, who organized a company called the "Barranoff Island Gold and Silver Mining Company. Capital, one million dollars, in shares of one hundred dollars each," Haley and Milletich receiving one-third of the stock.

Undoubtedly the operations based upon this ledge are those which have drawn forth the animadversions of Prof. Elliott. As usual, when I differ from him, it is only in degree ; his assertions are well founded for about three quarters of their strength, but they are too sweeping. The stock is not "worthless," for the ledge is undoubtedly auriferous, and of considerable extent, no one knows how great, and a shaft which is down sixty feet is in good ore all the way, as I know from personal inspection; but I shouldn't like to invest in the stock while the capital retains its present dimensions, which are enormously disproportionate to the present developments. I will say that I think that at a more moderate price, and in the hands of parties capable of developing and desirous to develop the mine, it could be made to pay. It is easy of access, and so situated that fuel and water are very plentiful and c.nvenient.

In May, 1873, the Stewart mine was owned by the seven men named. From this date to 1876 very little work was done on the mine, none of the owners being capitalists (Government officers and miners). During the winter of this year five of the company, who held that the two others had forfeited their rights, sold the mine to a company composed of business men of Portland, Oregon, and the Alaska Gold and Silver Mining Company—capital, \$300,000; in shares of par value \$1 each was organized, Haley, the discoverer, receiving 15,000 paid up shares, and the other four 10,000 each, to which was credited a certain amount against future assess-

Since its organization, this company has made endeav ors to develop the mine; it has met with losses through mismanagement, and has had, as is usual, quarrels among its members, but at this date it possesses a steam 10-stamp mill, shops, cabins and full outfit. A tunnel is in over 160 feet, in good ore all the way. Another, 100 feet above it, is in 84 feet, and another is to be started 300 feet below, where a distance of 350 feet will prob ably strike the ledge as indicated by the shaft, mill, this month, in eleven days' work, produced bullion valued at about \$1,800, and has ready for shipment over fourteen pounds of amalgam produced from free gold alone, the sulphurets not having been treated.

During the years 1874 to 1878 Haley, having procured

his discharge from the army, devoted himself to prospecting, and upon the same range discovered many other ledges, of which those which are considered to be the most valuable are known as the "Haley and Francis," "Wicket Fall," "Witch" and "Last Chance," and other prospectors have discovered and located about a dozen more. The "Haley and Francis," "Witch" and "Last Chance" I have visited. The first two are possibly pockets, inasmuch as their trend is east and west, but both are very rich. From the first named the first blast threw out and exposed over \$300 worth of gold, some nuggets ranging in value from \$15 to \$20.

From the rock of the "Witch," which is decomposed

quartz, of which I send you specimen marked 4, Haley has nearly supported himself and large family for two years, he and his boys packing in bags the broken up rock, crushing it evenings in a large hand mortar, extracting the gold with quicksilver, and selling the amalgam. I have watched Haley at this work, and know that what I say is true.

Haley's "Last Chance" was, until 1879, the easternmost discovered ledge. During this year a number of other ledges of probable value have been found still further east on the same range. From one, the "Great Eastern." I procured myself specimens which, when assayed by Messrs. Selby & Co., of San Francisco, yielded \$175 gold and \$5.20 silver per ton, I have seen their assay certificate, and this specimen came from the surface, and showed no free gold whatever.

Now, Mr. Editor, I have taken great pains to thor oughly sift all of the statements I have collected, All of the parties who possess knowledge on the subject have been carefully interviewed. When there were discrep ancies, as in the matter of dates there sometimes was, I have got hold of letters and papers and straightened out the account. And I feel satisfied that you have in this paper the first and only authentic history of the development of this region up to the present date. I have not told you a thing which I do not thoroughly believe my self. Before leaving the subject, I will describe just how Haley gets his gold from the rock, which is mining on a small scale, as I saw it to-day.

Scene-Haley's front room, temperature way up, for on the stove, cooling by a brisk vellow cedar fire, stands a six quart pan, half full of apparently sand and water, actually powdered quartz from the bagful standing in the corner—which Haley has packed in from the Witch during the fall-water, and a few ounces of quicksilver. This mess he is stirring up with his bare hand, while I, with my briar root for company, sit in his rocking chair and watch and listen to his descriptions.

This rock he has powdered, or "pulped," in a big iron mortar, by hand, roasted four hours, with a sprinkling of salt "to kill the sulphurets," and is now amalgamating. About five pounds of rock, less a few rather pretty specimens on which free gold was visible, and which I appropriated and send to you, constitute the charge. When it was "done" (he couldn't tell me how he knew it was "done," it being entirely a matter of experience; but he could tell when the quicksilver had gathered up its affinity) he carried the pan to a washing tub, a third full of water, and washed, or panned it, by a circular motion, which looks easy enough, but is apt to result in a spill with a green hand, until at last nothing but the quicksilver remained. This he washed thoroughly in saucers of clear water, enveloped in a buck-skin cloth, and squeezed by means of a strong cord, which he wound round and round, the mercury spurting in spray through the pores, until but a little hard lump remained. He opened his buckskin, and there was a lump about as big as an ordinary bean, looking like tin foil; this was amalgam, and in it was nearly all of the amalgam that the five pounds of rock had contained. Not all, for had I not hurried him he would have re-

peated the washing and squeezing to save "waste," and had he retorted the amalgam he would have obtained somewhat better results than his home resources (which consisted of a spade, on which he laid and roasted for a few minutes the button) permitted. As the quicksilver passed away the button turned vellow, and he scraped from the spade twenty three grains of flour gold, which I inclose to you, as tolerable good evidence that the stories of gold mines near Sitka are not absolutely "fairy tales. I don't own any of this mine, Mr. Editor, but I wish I did. Flour gold is worth four cents a grain, and if five pounds of rock produce, with two hours' labor of one man, nearly a dollar, a ton of the rock is worth

It is probable that the sulphurets will yield as much more. Of course, Mr. Editor, I can't vouch positively for everything I have told you, but I can assure you that I myself believe every word to be true,

Feb. 23d .- The steamer is four days overdue, and her coming day is very uncertain, for we are having regular spring weather, rain and fogs and snow, which tend to make navigation hazardous,

During the month the temperature has averaged about 35 degs., but the snow that fell in January don't go. This has been the coldest winter that has occurred for thirty It is very evident that the season is backward, for the woods are becoming populous with returning birds. Fish eagles, which left us last fall, have returned. and innumerable ducks, which come in good time, as the venison is getting bad.

I find Coues' "Koy" invaluable. I have already identified as follows: Old wives, surf-ducks, mallard, harlequin, Canada goose, Hutchinsii, scaup, lesser scaup, Barrow's golden-eye, butter-balls, mergansers, and several grebes etc. Not having enjoyed very favorable weather for hunting, we have been compelled to seek other amusements, among which have been a couple of weddings of members of the Jamestown complement and of Sitka's. First, one of the crew led off; and on the 9th inst, one of the officers, Mr. Frank Guerton, was by the Rev. Father Metropolsky united to Miss Nija Kastromitenoff. who is a cousin of the wife of Prof. Elliott, a young lady of Russian parentage, born in Alaska, and one whom we were all glad to welcome into the service.

March 26th.—This letter should have reached you ere this, but for sixty days we have been cut off from all communication with the world The California, on her up trip in February, knocked her rudder off on Columbia Bar, and after a hazardous passage to Victoria has been there detained for repairs. She came through yesterday, and goes to-day.

We are having the pleasantest March Lever spent in the temperate zone, having had but four days which were not bright and warm; that is, it felt warm, although the thermometer did not go above 45 degs., and the snow goes off very slowly. The steamer's arrival was a godsend. We were out of most everything, including patience, but not including those watery walnuts, dubbed potatoes, which have during the last few days rewarded me for the battle I have given in their cause,

One note more about mining. By this steamer there goes down four bars, each weighing seventy-two ounces. of gold produced from the free gold, the sulphurets not having been treated, during about thirty days' work of the Pioneer Mill. PISECO

GAME PROTECTION.

New York Association.—At the last meeting of the New York Association for the Protection of Game, Mr. Wm. M. Fleiss, of the Committee on Amendments to the Game Laws, reported that the various matters referred to his committee had been carefully attended to, and he had no doubt that when the laws, as amended, should be printed, it would be found everything desired by the Association had been carried out. Dr. John W. Greene called the attention of the meeting to the recent death of Mr. Geo. C. Colburn, one of their most active mombers, and passed a high eulogium on his character as a sportsman and a gentleman. A resolution on the same subject was proposed by Mr. Townsend and adopted, and on motion of Dr. Stephen A. Main, the Secretary was directed to send a copy of it to the family of the deceased. President R. B. Roosevelt, Dr. Greene, Chas. E. Whitehead, C. Dubois Wagstaff and T. B. Baldwin were appointed a committee to attend the annual convention of the New York State Association for the Protection of Fish and Game, at Game Laws, reported that the various matters referred mittee to altend the annual convention of the New York State Association for the Protection of Fish and Game, at Seneca Falls, N.Y. A communication was received from the Secretary of the Long Island Sportsmen's Association, requesting the cooperation of the New York Association in endeavoring to have the State Association's convention for the year 1851 held on Long Island. After a discussion, the delegates to the convention were instructed to favor the holding of the convention of 1881 in the vicinity of New York.

MIGHATORY QUALL.—Boston, May 11th.—Editor Forest and Stream :—For the information of those interested in the importation of migratory quail, I send you the fol-lowing extracts from letters received from Mr. Braun, lowing extracts from letters received from Mr. Braun, being my latest advices. Under date of April 17th, he body and rafters, one at each end of every log, short-buy as many quail as possible, without limiting the price. This, as well as the restriction of the law for catching the birds, and the higher cost of the licenses, will, no doubt, make the quail very expensive; but you may rest assured that I shall do all in my power to secure it is the most delicious, as well as healthy bed that can be them. We have had Scirocco for the last ten days, and

not a single quail has been seen, as yet, upon one island. Let us hope that the wind will soon change, so that I can purchase and ship the quail as soon as possible." Under date of April 19th, he writes: "The first quail made their appearance this morning, but in very insignificant quantity. I shot only five. If this wind (Ponente W. S. W.) continues, we will see more to-morrow."

HORACE P. TOREY

MIGRATORY QUALL.—Rockland, Me., May 3d.—I have seen, in a Rockland paper, that the quail which I released last spring, and which bred here to some extent, had returned, and had been seen by a number of parties. I should be very happy to confirm the report; but the evidence I have received I do not consider relable enough to warrant publication. As soon as I learn for a certainty of their return, I will write you of the fact.

James Wight.

We hope soon to receive authentication of the return of these birds, and would remind others of our readers who are interested in the introduction of the birds, to gather such information as they may of the return of the quail this spring.

ONTARIO.—Welland, May 8th.—S. D. Woodruff, Esq., of St. Catherines, President of the Long Point Game Club, was on the 4th brought up before the Mayor of Welland to answer to a charge of shooting snipe out of season. He pleaded guity to the charge of having shot four birds, and was fined \$40 and \$5.50 costs. He was prosecuted by the Game Inspector of the County of Welland Game Protective Association.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR CAMP

GAME AND FISH DIRECTORY

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value; State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to addre

Address all communications to "Forest and Stream Publishing Company, New York."

HOW TO MAKE A CAMP.

HOW TO MAKE A CAMP.

BETHEL, MAINE.

IN some former issue of Foress And Stream the past winter, an appeal was made to practical funters to give information in regard to building camps, as I understand it, for temporary use in the wilderness. I will give my method in as few words as possible, so that my ideas may be reached and utilized, if desired:—

A water-tight camp may be made of fir boughs, or even hemlock, by making the roof steep, and lapping the boughs on thick, in courses, with the butt up. The form of the framework may be in several ways. I will mention only two: First, cut poles with crotch at upper end, ten or twelve feet long, say six or eight of them. Stick the top crotches together, and spread the bottoms to any desired diameter—according to the size of your party—in a circle; then commence to spread on the boughs, beginning at the bottom, and carefully and thickly lapping them to the top, leaving a parting between two poles for a door. This is also the Indian method, and is called a wigwam. Second, cut two poles seven or eight feet long, with crotch at top. Stick these in the ground, but down, as far apart as you wish the length of your camp to be; say, for four men, make your camp ten feet long, and more or less according to your unmber. The two corner stakes being fixed, cut a polo reaching from one to the other for a ridge-pole, then cut shorter poles to reach from your ridge-pole, then cut shorter poles to reach from your ridge-pole, then cut shorter poles to reach from your ridge-pole, then cut shorter poles to reach from your ridge-pole to the covering, be it boughs or bark.

This is what we call a shed camp, open in front, where we build our fire at our feet when we lie down.

and put them near enough together to hold the covering, be it boughs or bark.

This is what we call a shed camp, open in front, where we build our fire at our feet when we lie down.

Two of these camps made together, facing each other, form what we call a tight camp, by standing small evergreens up thickly at each end, and leaving a door at one end. These camps are easily and quiekly made, and may be covered with bark, if desired, of the white birch, at any time of the year, or spruce or hemlock in the season of pealing; viz. June or July.

For a more substantial lodge, find two large trees far enough apart for the length of your camp, cut notches in each of the trees as high as you wish your ridge-pole to be, say seven feet, more or less. Place your ridge-pole in these notches, and withe it solid to the trees. Is sure the pole is stout enough; then coll up a good heavy log for the back of your camp. Split firs or ocdar trees in halves to the desired length, and place them, the lower end on the log at the back of camp, and upper end on your ridge-pole, in the following manner: Lay two half logs flat side up, and another flat side down, lapping on each, and so on over the whole. Stand splits on end to cover end of camp. This is the same form as the temporary bough camp, and by covering two together, will make a very durable light camp for winter or summer. If for cold weather, throw on plenty of green boughs over the splits, to stop all air-holes.

Another home, or substantial camp, is made of logs notched at the ends, and col-housed together, cutting out door after the body is up, laying gable ends on top of the body and rafters, one at each end of every log, shortening the logs as you go up, until you reach the ridge-pole, and cobbling up the chinney-hole with smaller sticks in center from body of camp, and cover with bark or splits.

Cover the ground for elegping with fine fir or hemlock

splits, with a draw-knife and axc. Cut a straight-grained codar in four or six feet junks, split them in two with your axc, then into one incl. thicknesses with axe and draw-knife, which can easily and quickly be done.

J. G. Rich.

New Youk—Lowville, May 5th.—A few Wilson snipe and big yellowlegs have been killed by our sportsmen. I shot a fine goshawk recently, and last week I received a prize, a Florida galirude, the first that I have known of being taken in this vicinity.

II. W. H.

prize, a Florida galinule, the first that I have known of being taken in this vicinity.

Senker Gux Clui—The State Association.—Seneca Falls, N. Y., May 10th.—We are nicely located, with three spaceous rooms, richly furnished. For the entertainment of our friends nothing more could be desired. The Twenty-second Annual Convention promises exceedingly well. Messes, Hong, Parrish, Lawrence, Williams and Selbek are working like beavers, and nothing is left undone that will contribute to a successful meeting. The grounds (which are located within three minutes) walk of the main business street) are being staked out. Pens for 12,000 birds are built, and half the birds are here, with 1,000 to 1,500 coming on every train, and a fine lot they are, too! A grand stand, reporters' stand, benches and covering overhead for indees, secretary's office, etc., are being built, and much interest is exhibited by all our people. The valuable articles in the prize list are not overrated, and many gold purses speck for themselves. Fortunate is the man who wins W. E. McMasters' "Spring in Normandy," in double bird shooting. Our "spring in Normandy," in double bird shooting. Our "spring in Normandy," in double of all arge party from Brooklyn and New York. The Seneca (Mn Club most cordially invite the sportsmen of New York State to meet here May 24th, and promise that everything shall be done to make their stay pleasant. X. Georgia Norus.—Macon, Ga., April 26th.—We have an content of the members to manne content of the results of the prophers to prophers the prophers to manne contents. Chirch or one of the propher to prophers to prophers to manne contents.

York State to meet here May 24th, and promise that everything shall be done to make their stay pleasant. X. Georgia Norges.—Macon, Ga., April 26th.—We have a gun club of fifty members (Oemulgee Shooting Club), but as this is our second year, glass hall shooting Las lost most of its interest. Through the club's influence, one of our representatives, who is a member, has secured the enactment of a game law, which we hope will result in much good. Macon can boast of some very fine shots, and as our principal game is quail and doves, it behoaves us to protect these birds, and we now hope to have a large increase by enforcing the game law. A few weeks goo I made a visit to Eastman, in Dodge County—both namel after excellent and honorable men. I proceeded by buggy to the Oemulgee River (the samewe have here to hunt turkeys; but failed to bag any, though I saw and heard several—also jumped two deer. Spending the night with a saw mill man, I learned of a novel duck's nest. I mention my visit more to ask of this than anything else. The mill is located by a small pond, which is n a natural basin, the hills on all sides throwing the water into this basin, and here a small lot of summer ducks roost every night. One pair of these ducks have a nest thirty feet above the ground in a large poine tree, entering through a hole 4x6 or 5x8. Is this a common thing? I tstrikes me as very unnatural.

ARKANSAS IN WINTER.—Jacksonport, Ark., May 1st.—

ememing through a note as very unnatural.

Arkansas in Winter.—Jacksonport, Ark., May 1st.—In your kast issue, a very interesting article by "Dardanelle" struck my attention. I can indorse every statement "Dardanelle" makes, except one, with a qualification. It is true that malaria, and all which that implies, is provalent all over the lower portions of this State. The summer is the sickly season. After first frost, the tourist would have nothing to fear. It is true there are plenty of reptiles and insects. They are only troublesome in summer. The winter cold lays them. The winter climate is admirable—almost perfect. Our summers are too bot; the winter is our sporting season. The statement I can not indorse is in regard to musquitos. They are unusually numerous and attentive in every part of the State where I am acquainted. It is ten years since I have been in Yell County; the supply was in the excess of the demand there in those days. I think "Dardanelle" will cheerfully admit that most, if not all, the non-attractions of which he speaks, are applicable only to the warm season.

only to the warm season.

Only to the warm season.

Caranda—Montreul, April 19th.—There has been a fearful slaughter of ducks and geose at the foot of the Lachine Rapids. One man is credited with killing over a thousand hast week. They have actually taken carts up the lower Lachine road to bring them to the market, not being able to carry them otherwise. I was told this morning that all one has to do is to point your gun at the flocks as they approach, pull the trigger, and they cannot help getting lots.

manufacturer, because there is no sort of necessity for the retail desder; the exigencies of trade do not require limit; he is not a necessity, nor even a convenience, and hence there is no reson why I should pay his profit, because it is just as easy for me to deal with the manufacturer or imported directly.

Our country is cursed with the enormous number of "middlenen." It is perhaps more manifest in the dry goods trade than any other. When the goods pass out of the hands of the manufacturer they are handled by the commission merchant, the jobber and the retail dealer, and to each one of these the consumer must pay a profit; and it is wrong, because unnecessary. People everywhere foel and understand it could be adduced than the success of such houses as that of Lord & Taylor of your city; houses that buy directly from the manufacturers in this country and abroad, and so are enabled to sell goods without the additional profits of the commission merchant and jobber. A similar success does and will attend any other business where the effort is made to save profits to the consumer. It is this same principle which lies at the bottom of the "Granger" movement, and whatever may be thought of that body as a whole, this foundation principle is true.

But it will be urged. "You will ruin the business of the retail dealers in guns," Well, if he is mot a real necessity, he ought to be made to yield; and that he is a necessity can scarvely be shown. "But if you drive him out of business what will he do?" A gain, let me reply in general terms, and I leave the objector to draw his own conclusion. It is a crying, glaring evil of the times that men leave the country and rush to the cities. The result is that agricultural interests are neglected, while mereantile life is overcrowded. The consequence is that the whole land, city and country, suffer. It is well known that not only does the "backbone" of any country lie in its runal population, but that its prosperity is always in direct proportion to its agriculture. Let the nen

PATTERN AND PENETRATION.

HILLSBOROUGH, N. B., April 19th. HILLSBORGGH, N. B., April 19th.

VE left the bluebirds (true harbingers of spring) far
behind us, and got home to find all nature still
locked in the embrace of winter, ice and snow, and the
"gray goose" (characteristic, but less sentimental bird
of the season) dropping in upon the marshes in its
orther light, naturally reopened the gun case, in fact

northern llight, naturally reopened us, an end as theory.

The weekly advent of the Forest and Stream is a pleasing circumstance in our life out here, and I can almost imagine a gleam of delight in the eye of the great antiered moose head, over the gun rack in the ball, when it comes in with the Monday post. It may be, however, with less fraternal feelings since you abandoned your old

In looking over the numbers which had come through the winter, I came across an article on "Pattern and Penetration," by "Au Sauble," which recalled a very interesting contribution of last December, "Various

the winter, I came across an arrange of a compensation," by "An Sauble," which recalled a very interesting contribution of last December, "Various Guns and Gun Makers."

It seems to me that in both of these the writer omits elements or facts necessary for a full comparison, I am under the impression that most, if not all good makers buy their barrels in the rough, and in this respect are equal; hence the difference in the shooting of guns may depend upon the quality; and disposition of metal, and form of bore in all barrels of the same weight. We have a mathematical conception of a cylinder; but in the term choke have only the idea of converging lines. Now is it impossible to adopt in the common gun language, the elements of distance, and possibly force, in connection with the word choke, so that it may convey some intelligible impression? It strikes me this might properly be associated with pattern; and penetration—be associated with powder. If the foregoing inferences are true, all makers should be able to make the best shooting guns of a given quality. Style, action and shape are outside of this, and comprise taste, ingenuity and fit.

be associated with powder. If the foregoing interences flocks as they approach, pull the trigger, and they cannot help getting lots.

AUN ALTERIAN PARTEM—CHEAP GUNS AGAIN—Editor Forest and Stream—Several articles have recently appeared in your paper strongly consuring the practice of several manufacturers and importers of guns in selling guns at a considerable discount to those who use them. Now there is something to be said on the other side; will you allow me space to say it?

There are a very large number of sportsmen (perhaps the majority) who wish to secure the best gun that their means will allow, and who yes are unable to pay the light prices asked by most retail dealers. To this class I freely confess that I belong. Must we, then, content ourselves with an inferior arm because we cannot pay the 25 or 30 per cent. profit asked by the retail dealers. In such a course we should be shut up, if the advice or your former correspondents be followed, and manufacturers and importers be compelled to discontinue the discount to actual users of guns.

"But," say your correspondents, "it is a manifest injustice to the rotal dealer, which in the end must drive him out of business." Let us look a little closer at the matter before we assent to this as unanswerable. It is quite true that we must and ought to pay cheerfully for windever is necessary. In many lines of trade, middle men, so called, are a necessity; for example, I cannot order a suit of clothes of the manufacturer of casimeres in New England. His business forbids that, Nor can my tailor order his goods direct from the manufacturer of dealers or the profit of the jobber and the tailor, and I do so cheerfully because the necessities of the case require it. In the East, at least, there is no necessity that I should go to the retail dealer in guns.

I maintsin that if I can I ought to buy direct from the

more than I expected. I am not speaking "by the card," for I find my nose too near my thumb in deliberate shooting, and avoid it when I cam, I know it comes from holding too snug to the shoulder. When shooting quick, it is a light touch and go, and not felt; but a good gun is a good gun, and we don't want to see the pattern to know it. "Au Sauble" touches the true-spirit of investigation at the close of his letter of December 4th; but when he refers to the excellence of fitting in a Williams & Powell gun as a defect I fear few will agree with him in that respect. If it is a fault, it is in design, and loose fitting cannot cure it.

The fact is, all clese being equal, every man to his taste—drop action, or side action, the difference is a refinement beyond utility.

I knocked the right hammer off last fall, and for about two weeks carried a double gun to shoot a single one.

two weeks carried a double gun to shoot a single one.
I am now decidedly for hammers under deck; but still
divided in opinion between the "crop-eared terrier" and
cunning fox.

Shepody. cunning fox.

SHOOTING MATCHES.

MAINE-Peak's Island, Portland Harlon .- At a shoot of the Peak's Island Shooting Club, Friday, May 7th, for the Secretary's gold badge, Card's rotary trap, 18 yards, 20 single and 10 double rises, the following scores were made:-

A.G. Sterling shot 30 straight, the first consecutive 30 in or A.V. ACKLEY,
Scoretary Peak Island Shooting Club.

The State shoot at pigeons will be leid at this place in September, for the diamond badge, and any one having wild or tame birds for sale later in the season can address A. V. Ackley, Secretary Peak Island Shooting Club, Maine.

Mariboro', May 7th.—Glass-ball match between a feam of ten men of the Mariboro' Sportsmen's Club and a feam of ten men of the Lynu Central Sportsmen's Club, of Lynn, Mass., string of thirty balls, thrown from an extra swift rotary trap at 18 yards rise:-

Howe.... Pond.... Hudson. Beaudry Smith... Rugg.... Brush... Total.....

* Shot in place of Belcher, who didn't reach the grounds in sea son for the match.

NATICE PS. COCHITUATE,—Natick, May 8th.—The sportsmen met ut their grounds to-day, with the Cochituate Club, and had a match shoot at tenrotary and ten doubles. The visitors stated when they

Following is the score :-

| entered that they would carry off the honors, and so they did. **Pollowing is the score :— | WASHINGTON GUN CLUB.—Washington, May 8th.—The Washington Gun Club held its first meeting for practice last Thursday. The club is composed solely of anatours. Several members of Concress are numbered among its members. The club grounds are at the Holmend farm, about a mile beyond the boundary. The magnificent park of the Soldiers' Home is within a stone's throw of the club grounds, and the location is unparalleled for its nutural beauty and shooting advantages. The following is the score | largoscores, as the wind seemed very steady from south to wost, indicating upon the diat 7 to 8 o'clock. The light was good and the atmosphere of the clearest. Executive Officer Whiler called the match at 11.15 o'clock, and eight out of the nine saw the white disc come up for good buils at 80 yards. After funch the gentlemen started in at 900 yards. The wind had changed several points and became rather crattic, and assumed a decided "fish-tail" from the south. The long distance signat flags were variated eagerly. |
|---|---|--|
| NEW YORK—Fraubilin, May Tith.—The Oulcont Sportsmen's Club contest for gold badge was shot May Sith. Card's rotating rap: Rogardus rules; weather hot. The following is the score:—W. Itutherform. New Itutherform. | of the first shots; Card rotating (raps; 18 yards rise; 20 balis each:— Henry Pochler | There were no atmospheric changes to affect elevations, and wind gauges were tenderly nursed. Summer, Brown, Gerrish, Lewis, Wilder and Nichola all sent the leaden bullet well into the center of the bullsey on their first shot. The centiment retired to the long distance with elegant records for the day, and large scores were looked for. The trouble, however, began here, and the wind would not be controlled even by the best shets. Justesson again got an "unnecountable," as did Lewis and Nichola; Wilder saw a flock of "mags," and Nicholas brought the "black-bird" prominently before the spectators, who were numerous, Col. Farnsworth, of Fryeburg, Me., and Mr. Farnsworth, of Lovedlj. |
| SYRACUSE, May 4th.—The Second Ward Amateur Sportsman's Club, of this city, beld their weelty metal shoot. As E. H. Mann and Jacob Gebhardt had each won the medal twice, it was decided to have them shoot at twenty-five giass buils for final possession with the following result: E. H. Mann | CAPITAL CITY GUN CLUB.—Woshington, D. C., May 8th.—The match for two gold medals took place (bis afternoon. Card's retary trap; handleap rise; — Score. — Total. Levi Woodbury — 20 11 10 11 11 11 11 11 | both devotees of the title, were among the spectators. The match ended with Mr. Sumner as high man. The summary gives the leading scores out of the nine who entered: |
| E. H. Mann, after the above, shot at balls lying on his back, and broke five straight. He is one of the most promising shots in the country. MONHOW COUNTY SPORTSMEN'S CLUB.—Rochester, N. Y., May the.—Matches at 21yds; birds in good condition:— FIRST STRING. Mr. Hooker began by shooting at double birds. | H. L. Shepard | Capt. W. H. Jackson \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ |
| $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$ | Lev! Woodburry | William Gerrish. \$\begin{cases} 8005 & 3 & 5 & 5 & 5 & 5 & 5 & 5 & 5 & 4 & 4 & 5 & 5 |
| H. Walzer SECOND STRING. | —For information about the Louisville shooting tournament address T. C. Barbour, 166 Main street, Louisville, Ky. The dates are May 31st and June 1st, 2d, 3d, 4th and 5th. Mobile, May 6th.—The Third Annual Pigeon Tournament of the Gulf City Gun Club, postponed from April 28th, 36th and 36th, will positively be held on the 18th, 14th and 15th of May. The shoot will be conducted in accordance with the programmes pre-shoot will be conducted in accordance with the programmes pre- | 1900 |
| C. Young. | viously issued. G. W. TENSTALL, Chairman ex-Com. Gulf City Gun Club. Mississippi—Union Church, May 1st.—Match at glass balls; 18 yards rise:— Strigle Balls. J. D. McArn. Online Balls. J. D. McArn. Online Balls. | Boston, May 8th.—There was a large attendance to-day at Walnut Hill. The weather indications in the early morning gazo every prospect of a capital day for the sport. The wind indicating 3 o'clock rather strong and reliable, and the light of the best. The spectators were very numerous, and as the long-range rifference were out for practice, they had an opportunity to witness the long-range, mid-range and short-range shooting. There were |
| NR. Wilder | ### ### ############################## | eighty entries in the Everybody's match, and capital results were achieved. In the 509 yards match there were sixty-eight entries, and really brilliant work was done. At the beginning of this match light fleecy clouds produced a good light, but the wind had changed several points, and gave considerable trouble. It is a land windage, but Charless, Kirkwood and Richardson got 33 cents and windage, but Charless, Kirkwood and Richardson got 33 cents. |
| This was a sweestake shooting match for first and second prizes. Mr. Walzer took first prize. Second prize was not decided. Mr. Hooker | Address all communications to "Forest and Stream Publishing Company, New York." | out of a possible 55, and Nichols and Jewell 32 cuch. The summary shows what good results were obtained: O. M. Jewell. 5 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 5 5 4 5 |
| Mr., Walzer 1 0 1 1 1 1 Rochester, May 7th.—Annual pigeon match of Rochester Gun Club at Driving Park. A stiff northwest wind all day; birds strong, and two-thirds of them drivers to the right:— First match, 21 yards:— Michael | RANGE AND GALLERY. Massachuserts-Springfield, May 4th.—Scores made at the weekly meeting of the flod and Gun Rille Club, May 4th. Good light, with a fresh southwest wind during the latter part of the afternoon:— 5 5 5 5 4 5 4 5 4 5 4 5 4 5 4 5 4 5 4 | A. B. Archer. 4 5 5 4 4 4 5 5 4 5 5 4 5 5 5 5 5 5 5 |

AMATEUR RIFLE CLUB.—This old organization, having decided to send a representative on the American Team 10 Ireland, set about his selection on Friday last, according to the programme to send a representative on the American Team to Tream, see about his selection on Friday last, according to the programme already printed in the FOREST AND STREAM, providing a two days' test, the leader to be the selected man. Eight members of the club entered the competition; six of them completed their score. The first show was discharged at 11.30° clock, at the 800 yards range, and at that time there was quite a party of gentlemen round the fring points. Mr. Charles W. Minor, the secretary of the Amateur club, was in charge as executive officer; Col. John Rodine, captain-cleet of the team, was on the ground watching the work of his future subordinates; the contestants, Messrs. R. Rathbone, L. L. Allen, L. C. Bruce, W. H. Jackson, W. M. Farrow, N. D. Ward, H. Fisher L. Hephurn, were squadded on targets "Star" and "VI.," while a handful of other gentlemen shot on an adjoining target for practice. Later in the day Major Henry Fulton, chairman of the National Rille Association's Committee on Choice of Team, also put in an appearance. One hour and a half was spent at the first range, and then a recess for lunch was taken. The other distances were covered in a shorter time, and the en-Spenta Industriance, and there is telescond to the whole the other distances were covered in a shorter time, and the entire competition came to an end at 4.20 o'clock. Mr. Rathbone was suffering much from a cold, and though be made the good total of 47 points at 800 yards, he withdrew before completing the next distance. Mr. Hepburn made 67 at 850 and 66 at 800, but withdress the state of the drew after firing 11 shots at 1,000 yards.

The weather was most trying. The wind was a decided "fish-tail," blowing from the south in fitful gusts, which defice all cal-culation, and which rendered necessary a change of windage sometimes amounting to seven points between shots. The light sometimes amounting to seven points between shots. The lign was in the main good, though rather changeable, and clevations were very unsteady. The dampness of the ground also caused a mirage, which rendered accurate "sporting "impossible. Under these circumstances, the day's work must be regarded as excelent. While no brilliant score appears, all are good, and the tota made by the six men who completed their scores (of 1.1/9) exceeds by 4 points the total with which the team of 1876 defeated its lirish rival in the match shot on September 22d. It must also be renembered that those who shot on Felduy have had little or no opportunity for practice this year, and will not be at their best for a week or two, when the rust of winter will be worn off. this lack of recent practice must be attributed the rather formida-ble array of misses that appears in the record, which ran as fol-

The match of the second day was continued under atmospheric conditions somewhat similar to those of the previous day. The wind was from the north, but was steadier both in force and di-rection than before, and did not materially affect elevations. The light was stronger and a trifle more glaring, but less uncertain. The advantage of Friday's experience and the slightly bettered The advantage of rricay's experience and the signly bettered conditions combined to make a marked improvement in the scores. The team total of the six competitors was 1,181 out of the possible 1,285—an advance of 12 points over Friday's result. The highest individual score made was that of Mr. L. C. Bruce, who secured 201 out of the possible 225 points. The day's work is fully represented by the following figures:—

| L. C. Bruce | 900 1,000 | 5 5 5 4 5 5 | $\frac{5}{3}$ $\frac{5}{5}$ $\frac{5}{5}$ | 5 5 5 5 5 4 | 3 5 4 4 4 | 5 4 5 5 5 5 | 53 43 53 | 54-69 $45-66$ $3-66$ 201 |

THE RESULT .- The aggregate results of the two days' compet tion determine who shall represent the Amateur Riffe Club on the team. They are as follows:-

| | First Day. | Second Day. | Total. |
|---------------|------------|-------------|--------|
| I. L. Allen | | 200 | 393 |
| L. C. Bruce | | 201 | 394 |
| W. M. Farrow | | 198 | 393 |
| W. H. Jackson | | 200 | 393 |
| N. D. Ward | | 189 | 386 |
| H Fisher | 193 | 193 | 386 |

Mr. Allen explains that he shot in the competition purely for recreation and practice, and without any idea of accepting the position if he won it, and this fact leaves Mr. L. C. Bruce the winpecretation and presented and without any face of accepting the position if he won it, and this fact leaves Mr. L. C. Bruce the winning man. Mr. Bruce held the position of reserve on the team which went to Ireland in 1875, and in the fall of the same year he was a member of the team which defeated the Canadian marksmen at Creedmoor. He was chosen on the team of 1876, which shot the first competition for the Palma, but resigned his place in favor of Col. Bodine. He, however, again shot himself on to the team of 1877, and on the second day of the match with Sir Henry Halford's team he made his celebrated score of 219 out of the possible 25 points. Since that time, he has hardly fired a shotat long range until the present competition. He formerly used the Fulton position, but has lately adopted the improved back position, and uses a heel-sight on his rille. He is a native of Lexington, Ky, and is about thirty-one years old.

Rochester.—The following named gentlemen are elected as Directors of the Seventh Division Rille Range for the coming year: J. J. Rausch, George Eugert, Louis Ernst, Dr. Jonns Jones, Emil Ruchling, Fred, Miller, John N. Wettzel, John H, Wilson, C. P. Bromley, Joseph Eberling, George A. Begy, A. M. Koetb, C. P. Bromley, Joseph Eberling, George A. Begy, A. M. Koetb, C. P.

Bromley, Joseph Eberling, George A. Begy, A. M. Koeth, C. F. Lamb, Henry Nordan, Al. G. Wheeler.

—The first annual picuic of the Veieran Corps, Fifth Regiment N. G. S. N. Y., Col. Anton Meyer, President, will be held at Held's Hamilton Park, this city, May 17th.

West End .- The Columbia Rifle Range was opened on Tuesday, May 11th, for the season of 1880. An excellent opportunity is afforded by this range to all members of the National Guard rifle clubs, and to all lovers of the rifle in the vicinity of New York City, to take practice and compete in matches. The range A OTA CLTY, to take practice and compete in matches. The range is very accessible; it is within twenty minutes from New York by Erle Italiway; fare to range and return, 25 cents. Three matches were shot on the Ilhi inst., commencing at 2 P.M., and matches will be held every Tuesday and Friday hereafter during the season. On the IIth inst, the matches open were: First match for Sharps military rifles, 200 yards; second mutch, for Ballard mid-range rifles, 200 yards; third match Association Gold Medal, 500 yards.

A BIG FIVE HUNDRED BALL SCORE.—Franklin, Pa., May 4th.— his atterneon, before a large orowd, Otto C. Wilkins shot at 500

glass balls out of a Bogardus trap. The shooting was done with a repeating magazine gun, with R. G. Lambreton as referee, and H. J. Gorden as scorers. In the first hundred he missed the 17th and 58th, breaking 98 in the hundred. In the next hundred he missed the 50th ball only. The third hundred was the poorest of the lot, the 12th, 26th, 26d, 34th, 44d, 51st, 81st and 98th balls being scored as misses, in all 92 broken out of the hundred. In the fourth hundred the missed were on the 5th, 7th, 30th, 26d and 55th balls, and in the last hundred the missed balls. substitute of the third and the last hundred the missed balls were the 9th, 1th, 20th, 23th and 43d balls, making a total of 21 balls, or a score of 450 in the possible 500. The shooting was according to the Bogardus rules, and the referee writing of it, says: "His shooting was simply wonderful. After completing his score, he amused the crowd by putting holes in pennies, breaking lead pencils, or smashing anything any one was inclined to throw in the als. Lavas score, New York or the American State of the state of the same state of the same state of the same state of the same state of the same state of the same state of the same state. wilkins, with practice, will equal if not excel him."

MARYLAND RIFLE CLUB.-Ballimore, May 4th,-The score

At the annual meeting, April 17th, 1880, the following officers were elected for the ensuing year: President, Col. W. H. S. Burg-wyn; Vice-President, H. B. Coulsen; Secretary and Treasurer, J. B. Armstrong; Executive Committee, L. Deitrich, B. B. Lynch, T. J. Shryock, Dr. M. W. Foster, A. G. Alford.

The Pathyson Rife Range was opened for the season of 1880 on Sarurday, May 1st, rules of National Rifle Association governing. We shall be pleased to receive regular monthly reports.

WASHINGTON, D. C., May 8th.—The Columbia Rifle Association found a cloudless sky, a dancing light, oppressive heat, a dry air, and a feeble, uncertain breeze from 3 to 41 o'clock, awalting them on opening their fourth regular subscription match of the spring season. The four marksmen who entered had to work their passage, giving puinful attention to shifting windage and inctuating elevations, beside being sadly witted by the heat, which touched the nineties at 250, when the match began. Doctor Scott led the shooting at 800 yards and, after alternating between the owl and the faming of for four shorts, settled down to his task, and kept the white disc in steady play to the end, returing with 73 to his credit. Col. Burnsich and wretched luck at starting, netting only a total 89, which should have been two points better but for them on opening their fourth regular subscription match of the the mirage. During the 600 yards shooting the mirage died away under a freshening breeze, and the temperature became more endurable. Doctor Scott again led at this distance, dropping but two points, on his eighth and eleventh rounds, in the changing light, and again tailied 3. The Colonel shot in good style, his unfortunate centers almost grazing the optic, but luck was once more against him, aithough he tailied a good 71. At the last stage the fulling light and temperature put all the shooters on their mettle as to elevations, but the wind was kindly disposed, and the shooting of the leading contestants was of the highest rank, Colonel Burnside in particular shooting in first-class form to neutralize his opening red-bird. Indeed his initial twelve shots gave flattering promise of attaining a "best possible 74," but again the day's misfortune clung to him, and a marvelously close center, on his thirteenth round, followed by an unaccountable mage, on his last shot, which a trifle worse chance would have made a mantlet, damaged his otherwise splendid score. As it was, however, he ited the Doctor for 71. The shooting of Dr. Scott the mirage. During the 900 yards shooting the mirage died away made a manutet, dumaged his otherwise splendid score. As it was, however, he ited the Doctor for 71. The shooting of Dr. Scott was steady and close, his 217 being without an inner. His average in the four Dollymount competitions in which he has shared is now 2011, and it is not likely that the last competition, to be shot next Saturday, will change his lead. The following are the detailed scores of the two prize winners:—

| Dr.S. I.Scott | 8005 9005 1,0:04 | 5 | 5 | 5 | 5 | ŏ | 5 | 4 | 5 | 5 | 4 | 5 | 5 | 5 | 5 - 73' | 217 |

PRINCE EDWARD'S ISLAND .- The organization of the Prince Edward liffe Association has given an impetus to riffe practice in that locality, and though Thursday is the regular day, the range is in use almost daily. Some excellent scores are being made, and the ambition is to send a representative to Wimbledon.

V. L., Carson City, Nev.-1. W. H. Jackson divides his weight evenly upon both feet. 2. He stands in the most natural manner, see Perry's "Green Book," pages 84, 85, 3. He holds on to the buil. 4. Pulls steadily with the index tinger. 5. The score submitted by yourself is good for a beginner.

Mitted by yourself is good for a beginner.

J. H. R. Philadelphia.—A mutch is being shot open to "any rife;" military rifles used as such allowed two points. A, with sporting ride, makes 46; I, with military ride, makes 44, and with allowance counts 46. The competition is governed by N. R. A. rules, and nothing is said as to shooting off ties. Which one wins? Ans. The N. R. A. rules for an individual match at single distance decide by fewest misses, then fewest outers, and so on, and takes no cognizance of the handicap allowance. In this case it would seem that B loses.

MASSACHUSETTS YACHTING ASSOCIATION,

The following circular has been sent to all Massachusetts yacht

At a meeting of the yacht clubs, held at the Parker House, for At a meeting of the yacin claus, not at the Pareer House, for the purpose of forming an Association, and adopting rules and regulations to govern Union Regulatis, Mr. W. Lloyd Jeffries, of the Beverly Club, was chosen President, and Mr. Coolidge Barnard, of the Dorchester Club, Secretary. Vided, 1, Name-Massachusetts Yachting Association.

2. All Massachusetts yacht clubs invited to join Association.
3. Measurement—One-third or over-hang added to water-

line.

4. Allowance—Herreshoff tables adopted.

 Classification—For center boards, 1st class, 40 feet and under to 28 feet. 2d class, 28 feet and under to 22 feet. 3d class, 2) feet and under to 18 feet. 4th class, 18 feet and under. For keels, Ist class, 40 feet and under to 30 feet. 2d class, 3) feet and under to 25

feet. 3d class, 25 feet and under.

6. Ballast—No ballast to be shifted.

7. Sails—No restriction.

8. Orews—One man to every five feet of sailing length or fraction thereof.

9. Additional entries allowed in postponed races

defining entries showed in postponed races, ceretary to keep record of dutes of races and prevent, as far as possible, races of different clubs coming same day, the clubs to communicate with him before advertising their races. The clubs also to furnish him, as far as possible, with the measurement of their yachts.

11. Association measurer shall measure any yacht in ques

tion, in presence of judges of race.

If your club adopts these rules, and will join the Association

ase inform me, and oblige. Yours truly.

COOLINGE BARNARD, Mill street, Harrison Square, Mass.

Boston.—Your last edition spoke of measurement only as the main idea of the Massachusetts Yachting Association. If your correspondent, "M," can give some table to allow by, and some

correspondent, "M," can give some table to allow by, and some rule for his measurement, we should like to see it. The clubs represented were the Boston, S. Boston, Bunker Hill, Beverly, Duxbury, Quincy, Dorchester and Jeffries. The S. Boston and Dorchester clubs have voted to adopt the rules.

The two union regattas fixed for May 20th will be settled by the withdrawal of the Dorchester Club, although they decided first to have theirs on that date. Two open races within such a short distance of each other would both be well attended; and, as the Dorchester club always gives good prizes, theirs would likely draw many boats from S. Boston.

many boats from S. Boston.

At a meeting of the former club, held May 7th, Mr. H. S. Mann Mas decided Fleet Captain, in place of Mr. Geo. S. litee- gone west— —and Mr. Wm, Grey, Jr., was placed on the Regatta Committee in place of ex-Com. Barnard, resigned. Twelve new members were elected, and the Dorchester Y. C. is in a flourishing condition. MAINMAST.

YACHTING NEWS.

STEAM YACHTS FOR SALE .- The Herreshoff Manufacturing Company offer the Lefta and a smaller steam launch for sale. Both have safety coil boilers, and can be had at a bargain.

THE GLEAM .- On her recent trial the Gleam made sixteen miles readily, and the possibilities are that she can be driven up to twenty when her bearings are worn a little more. been sent to her owner, Mr. W. H. Graham, of Baltimore She has

YAOHTS' PHOTOS.—The enterprising house of G. W. Black & Co., 33 Washington street, Boston, has issued a printed circular, d'Anglaz, or the yacht's photos they have for sale, 1.1s proposed to add materially to their stock this year. Boston once more has taken the lead of New York. Photographers here are still asleepthough we have done our best to poke them up.

CIRCULAR YACHT .- Says the Oswego Times . "The Chicago Dry

Dock Company is now completing for Capt. Thomas Parker, Oconomowe, one of the queerest looking yachts that has ever been constructed. The craft has an 18ft, keel, a 15ft, beam and what is known as a saucer bottom, and when completed will draw but ten known as a saucer bottom, and when completed will draw but ten inches of water with a full load of passengers. She has but one must, which is located pretty well forward, and a mainboom that extends a considerable distance over her taffruil. She will have no gaff, and the mainsail will be attached only to the mast and tho boom. Then above that, from the topmast to the extreme end of the boom, will be what is known as a ringtail, the purpose being to aid in shortening or making sail.

YONKERS YACHT CLUB.—The spring regatta of this club was salled May 8th. Course from Biegam's dock up river to slake-boat off Glenwoo¹, thence to stakeboat off the Jersey shore, and back to start, then across to the Jersey shore again, and down river to Shefilin's dock, and return to start. Sail over three times. Distance, fifteen miles, giving a great variety of sailing. Judges, Messrs, Robert Fawcett, Ed. Connell and W. H. Veitch. Pinafore. in third class, not timed, as she had a sail-over. The summary is

BAY OF QUINTE YACHT CLUB.-The annual meeting they or QUINTE AND TO Experiment the treasurer was independently as the control of the Treasurer was independent of the treasurer was independent of the treasurer of the club list two first class, into second class and it third class yuchts, and one catimaran. Two yachts were sold out of and three added to the feet during the twelve months. Messrs. W. H. Bigger and J. L. Bigger have been elected members of the W. H. Bigger and J. L. Bigger have been cleeted members of the club. Aid. D. B. Robertson, Commodore, addressed the club, stating his desire to retire after two years of service, which was received with regret by the club. The following officers were then elected: Commodore, David Pitecathly, Dauntless; Vice-Commodore, B. J. Bell, Kathleen; Captain, William Pike, Sylviet, Secretury, R. S. Bell, re-slected; Treasurer, Morgan Jellett, Dauntless, re-elected; Measurer, S. T. Green, Zeiphy, re-elected, Megatta Committee, James Clarke (chairman), Hon. G. Sherwood, J. H. Starling, D. II, Robertson, E. Force, W. H. Higger, E. W. Davy, Thomas Wills, J. J. B, Flint and George Thompson.

Boston Notes.—In your last issue read Mr. James L. Little a owner of the Brenda; also fanthe, not Panther, the property of Mr. Alpheus Hardy, recently purchased from Mr. J. M. Sears.

If our correspondents will be a little more particular in the If our correspondents will be a fittle more particular it the chirography of technicalities and proper names, mistakes like the above would not occur. Compositors are unfortunately not always encyclopedize of everything under the sun.

OSHKOSH YACHT CLUB.-The Oshkosh Y. C. grounds presented lively appearance May 6th, the occasion of which was the unching of the following sloops: Carrie Morgan, Prospect Vineroth, Beatrice, Goodenough, and steam yacht Robert Brand Vineroth, Beatries, Goodenough, and steam yacht temert Brand. The latter is a perfect beauty, and has had litt, added to her length, and something very fast is expected from her. The sloops S. M. Hay, and Fifth have been sold to Green Lake parties, and will be taken away soon. The season is fairly open, and the spirit of yachting is making itself manifest to a considerable de-The yacht Niobe is reducing canvas by cutting down her

LONG ISLAND YACHT CLUB.-The officers for 1880 are as fol-LONG ISLAND YACHT CLUB.—The officers for 1880 are as follows: Commodore, Franklin Beames, sloop Marie; Vice-Com, G. H. Dilka, sloop Excelsfor; President, James R. Finlay; Secretary, Ellsworth Bond; Treasurer, F. Bates; Measurer, Geo. Crolius; Chaplain, James Edwards. Trustees—Wm. Oldham, Hiram Smith, W. H. Sawyer. Membership Committee—A. J. Seeley, Chas. Wetherell, R. Best, J. H. Sawyer. Regatta Committee—K. Keymer, James Nobles, H. Smedley, Wm. A. Daly, J. Lenox. The annual meeting was held May 6th. After the ordinary business was disposed of, the prizes won at the last regatta were presented, Elephan, Admiral Rowan, Excelsior, Jordanon and Tarans.

sented, Elephant, Admiral Rowan, Excelsior, Joralamon and Tarantella being the recipients in their several classes.

tella being the recipients in their several classes.

The annual regatta was fixed for June 15th next, at 10 A.M. In medium sized cabin yachts and open yachts, this club is very strong. Thirty seven starters came to the line last year, and this year it is expected that there will be more. At the conclusion of the meeting, ex-Com. Tripken was appointed a committee to prethe meeting, ex-Com. Tripken was appointed a committee to pre-pare suitable resolutions expressive of the deep sorrow of the club at the sudden and deplorable death of Walter Dixon. Mr. Dixon was well known as one of the old pilots of New York Bay, had been a member of the club from its organization, and was liked and respected by all. The resolutions, when engossed, will be sent to his family.

GOOD RUN.-The s. s. Lurline, Mr. Pierre Lorillard, arrived at Nowport, R. I., May 8th, twelve hours from New York

PROVIDENCE YACHT CLUB .- We have sold our old club house as the water was shoaling, and the gas works in the neighborhood were a nuisance, but as we are strong financially a now house will be built as soon as a good location can be decided upon. Our club is the largest and most enterprising on Narraganset Bay. Officers for the year: Commodore, Benjamin Davis; Vice-Commodore, Robert W., Jenicks President, Benjamin Stillwell; Secretary and Treasurer, E. F. Dustin; Measurer, A. M. Black; Trustees, Benjamin Davis, E. J. Anderson, S. W. Cameron; Regata Committee, D. Davis, E. J. Anderson, S. W. Cameron; R. E. Dustin, B. Stillwell. The Harvey J. Flint cup will be raced for in June, and the E. J. Anderson cup in September, of which matches I will advise von. as the water was shoaling, and the gas works in the neighborhood

THE CANOE REGATTA.—Rushton's canoe, offered as prize for the August Regatta on Lake George, is now on exhibition at Hig-ginbotham's store, Washington avenue, Jersey City. It is offered on condition of twenty starters in a paddling race, open to the

NOTES.—Tho season here will be a very brisk one. At Finsbury's yard business has been driving for some time past. The sloop Bille Mary, of Marblehead, has received a new overlanging stern, and about 4,500 lbs. of iron on her keel—another Illustration of the growing popularity of this idea. The casek schooner, kearless, has been "retopped," and other repairs. The schooner Romance has had a new overhanging stern, and other repairs, with about one ton of lead more into her keel. Shoop Vices to never house it is the vicinity is to have some unterstinos to Viva (a new boat in this vicinity) is to have some alterations to ber cabin. Schooner Helepon is to have some atterations in her cabin. Schooner Helepon is to have a new plank-sheer and a new standing room. Schooner Hebecca has had the hollow filled out on her bow, and a new overhanging stern; also has had her house lengthened. The sloop Rub is now fitting out.

At Brown's yard a fine new schooner yacht is on the sinely Although state and new sensoner years is on the snears. She is 221, 36 in overall, 16ft beam, 6ft, deep, and 5ft, on the water line, with LS00 list of iron on her keel. Her cabin is to be finished in mahogany and cherry. She is for sale. The schooner Meritor has received un entire new deek, and the sloop litter has had her has recovered in the development of the state of the state of the masthed squared up, oft. The schooner Creat is at this yard fitting out. Among the new boars on the stocks is one by the Reman Bross. A fine keep Isloop, 23ff. 10ng overall, 8ff. 9in, beam 3ff. deep. Sho will spread about 100yds, in her two lower sails. There are also quite a number of smaller boats to be launched this season.

NEW YACHTS .- Last Saturday there was launched from the New Yacuras.—Iast Saturday there was launched from the yard of E. Young, at Greenpoint, an exceedingly fine sloop yaelt for Mr. John G. Prague, of the Atlantic Y. C. She has been built upon lines furnished by Philip Edworth, and has his stamp all over. The successful sailing of the Elephant last year added much to the reputation of Eaworth as a modeler of fast yachts, small as well as large. In the new sloop for Mr. Prague we find much of the Elephant's form predominating, and as she is large enough to sail against such enecks as Vicen and Repina, the coming season will offer an opportunity for match sailing in this class never before equaled. If the Eleworth yachts are as successful as they seem to promise, it's good-bye to the clam shells, for the feature in the new sloop, as well as in matcher building at the same varden. in the new sloop, as well as in another building at the same yard in the new stoop, as wents in another building at the same yard for Mr. Cortwright, is depth and displacement—two points hitherto under the ban of public opinion, but now happily coming to the fore. Whatever the speed of Mr. Prague's sloop may be, he has certainly one of the handsomest and most stylish craft of her tonnage, both inside and out—a fact for which he has to thank himnage, noth inside and out—a tast for which he has to thank him-self, we believe, the outill and cabin decorations being of his own design, down to the smallest detail. As the yacht left the ways she was christened Fanita by Mrs. George H. Peabody, the pennant of the Atlantie Y. C. being mastheaded at the same time. She has been built under the superintendence of her owner, and is 50ft, over all; 42ft, w.l.; 17ft, beam and 6ft, bold proper; mast, 50ft, 6in, long; topmast, 24ft, 6in, including about 3ft, pole; boom, 3ft,; g.iff, 26ft,; diameter of mast at partners, 121in.: topmast, 7in.: boom, 7ln.: gaff, 5in.: bowsprit, 10x9in. at stem. 12in.; topmast, fin.; boom. fin.; agaff, fin.; bowsprit, loxin. at sem. and 20ff. outboard; hoist of mainsail, 4ff.; jib. 3ff. on foot. Lower sails of No. 7 canvas, made of 12in. cloths by Stuart, Full suit of balloon racing sails. Center-board, 13ff. long, with 5ff. 6fn. drop. Displacement, 21 tons; ballast, 13 tons of inside iron, The house and cockpit are very handsome in outline, the former 16in. high, with bright top. The decks are likewise to be kept bright. The waist has lecust stanchions, oak rad, and is almost 9in. high saniships. Two shrouds a side of 3jin. best galvanized wire. Topmast titted the bayer. Andrews 75 and 150 lbs. with 85 tins 4 and 150 lbs. Two shrouds a side of 31in, best galvanized wire. Topmast inted to house. Anchors 75 and 150 lbs, with 85 lins, 4 and 4 lin, chain, and a galvanized windlass on the bits. The sheer is graceful—about 12in. Keet, 17x18in., amidships of the "alligator" style Double frames of oak, 8x6 at keet, and 8x4 at head. Oak deadwood and keelson. Clamps and bilge streakes of pine; 24in, siding. Beams, pine, 4x5 in. Oak wales 8in, sided, and cedar plants, 14in. Two quarter-boats, 12 and 11ft, long. Rudder, 3ft, 6in face, with 7in, stock, and 3ft, 3in, wheel. A tlantic range No. O for galley. Cabin, 13ft, 6in, long, with 7ft, floor, and 3ft, 4in, head room; stateroom, 8x6ft. All trimmings of hard wood and brass, of very neat and original design. Raw silk cushions, plush velvet curtains, decorated crockery and cut glass-ware.

The Guendalen, a handsomeked sloop, will shortly be brought round to this port from Boston. She is owned by J. F. LoveJoy, who formerly sailed the Gad, of Boston, and Mr. Binner, one of the Fairy's crew of the same port. The Guendalen was built by Woods Bros., East Boston, in 1878, and is 31ft. 8in. in w. I., 35ft. over all, 12ft. beam, with 6ft. draft, and a wholesome is probable that she will be raced by her owners, who are thorough sailors.

A TEN DAYS' CRUISE IN '79.

(Courluded.)

RIDAY morning, on turning out, we found that during the light the B'anderer, N.Y.Y.C., had come in and anchored about a hundred yards away from us. At about 50 clock we made sail and slowly left the harbor. The wind was very light, and it grow beautifully less as we got outside, till finally we were becamed a few ailes of Cape Blizabeth. It was scorching hot, but there was nothing to be done but grin and bear it. Wetried fishing, but the only result of this was one duglish, which "Eben" landed on deck amid great applause. Along in the afternoon we were a short distance to the south and east of Cape Porp sies, which we finally made for and east anchor in the small harbor, if it is worthy of the name, at about 4.30. The cance was over the side almost before the anchor was down, and "Gasket" and the "Captain" padded away toward what appeared to be the town, followed by the other "boys" in the dunghy. All that we could discover was one man paliting a fishing schooner of about thirty tons, which he informed us was to be sold. After scarching in vain for some object of interest the canoe made out again, passing the dingly coming, and giving its occupants a shower from the paddies which caused the injured parties to immediately turn and give chase with the evident intention of wreaking summary vengeance on the heads of the offenders. Away flow the canoe toward the yacht, and after it the dinghy. A small Island lay between them and their utrinate destination, and toward it the canoe was headed, and the occupants landing, thereupon gave the attacking party a wet recoyltion. They decided to give up, and made for the yacht, hoping to cut of communication if followed by the canoe. They arrived some time ahead, and armod with mops and swabs, stood "prepared to repel boarders," but RIDAY morning, on turning out, we found that during the lowed by the cance. They arrived some time ahead, and arr with mops and swabs, stood "prepared to repel boarders," they had no easy time of it. The cances shot up under the bobst and the crew thereof "swarmed" up;into the bowsprit, the "C and the crow thereof "swarmed" up,into the bowsprit, the "Cap-tain" armed with a sponge. The fight was short but brisk, and the "tourders" having finally made a foothold on the deck, a truce was called, and all hands amicably retried to the standing room as the dinner bell sounded, and the belligerents retired be-low to attend strictly to business. Saturday, when we avoice, the falses of Shoals ranged dend ahead

Saturany, who we livouc, the issess Suoss ranged dead agrad about south one-half week, lifteen miles or more away. The wind, though fair, was moderate, the sky being clear overhead but cloudy to the castward. As we closed up on Appleidore, we saw what was at first thought to be a man-of-war at anchor off the island, but which turned out to be the United States training the island, but which turned out to be the United States training-ship Constellation. Our cruise was fast coming to an end, and we had to decline an invitation to remain for the "hop" next day in an hour or two the anchor was again lifted, and we swung round and ran out to the training-ship, gibing under her steen and salutine. Then, with our nose pointed for Cane Cod, away we fly under every rug, and before ionr put the "Shoats" well down on the horizon. Now came the tug of war. The cloudy appearance in the east brought us a cross sea and wind, the former catching her under the quarter gave her a roll which in time proved too much for the maintopmast preventer backstay, and snap went the hook, making the topmast bend like a whip, it was a good stick, however, and held. The leeward stay was immediately brought round and hooked and the stick saved, but not for long, as the roil axia passed too much, for both forward and after backstay hooke gave way with a simultaneous snap, making things fip for a few moments. The wind had freshened and the fog was rapidly coming up from the cartward, so balloon staysall and lib topsail are handed and come on deek to the relief of the topmasts. The small staysall was hoisted in place of the larg

a-weather, and just then the roy itting somewath we contain the awardner, and just then the roy itting somewath we contain the rocks which paradile or trained to Colassett's outer harbor dead ahead. With a feeling of relief we shide in over the but and anchor among a small fleet of fishing vessels, the fog shutting down until no state stais were furled. The sailing-master was quite with with joy, as he had been adrild of our bringing up somewhere on the coast where there was no harbor, which would have obliged us to keep of all night in the fog.

Sunday morning at 7 the skipper appeared at my berth for orders, renorting a time day and light breeze from the west southeast. This was fair for Plymouth, so telling him to make sail for that "rock-hound" spot with all speed, I turned over and snored that," so were not upon 10 when I again became conscious, and putting out my head, discovered that most of the "noble erew of this galinate back" had also come to, with the exception of the "infant," who makes it a point to skeep at least an hour longer that among eds. It was quite evident that there was not much morturnal artire, confirmed the suspicion by announcing a dead cain. We had managed to get a little way beyond Minot's Eight, and were then making little if any headway. We all lay quiety in our berthsand waited for breakfast, the bell for which brought us from our berths in statu que. This calm and light wind kept up

all day till we sighted the Gurnett Lights, when it freshened and and day fill we signifed the Gurinett Lights, when it ressented and carried us into the harbor of Plymouth in good style. We ram straight across the flats, the tide being full, and dropped our anchor in the mud near the wharves at 5 r.m. Carrying a warp ashore we brought her stern on so that a crowd of loafers on shore could have a fine view of the deck, and then furtled salls and spread awings so as to out off their view, much of course to these reliable. The next flow was should sall probability have shore could have a line view of the deeg, and tend furrel saus and spread awnings so as to cut off their view, much of course to their delight. The next day we should in all probability have gane out, but as there was not; the suspicion of a breeze and the sun was baking hot, we remained where we were. The Monument and Filgrim Hall were visited by those who 'bad not seen them before, but it cannot be said that the visit on shore was prolonged, every one showing a decided preference for being under the awning. The next morning at 6.30 we got under way and slowly made out of the harbor, bound back to Cohassett, to drop some of the crew. It took us, however, most of the day to got to lino the harbor with the light wind, before it actually fell a flat eaim. Here we found the Addie Voorheez, Capt. Abbot, our no one on board. As soon as the breeze came, next day, which was about noon, we put our departing friends into their cathoat, and with all ber duds spread the yacht was pointed for home, where we arrived and left our floating house with great regret. Thus ended our short but pleasant cruise, and we returned to business burned and browned and feeling like now men, all the better prepared to undergo the thresome daily grind of our professions.

NEW YORK AND JERSEY CITY CANOE CLUBS.

There will be one sailing and one paddling race on each day for each class of cances. Paddling race of the class of sailing cances will be started at 3 PM, sharp. Paddling race of the class of paddling cances will be started at 3.15 PM, sharp. Sailing race of the class of paddling cances will be started at 4.45 PM, sharp. Sailing race of the class of paddling cances will be started at 4 PM, sharp. Sailing race of the class of paddling cances will be started at 4 PM, sharp. The class of the second gain will be deemed the starting time. The time of the second gain will be deemed the starting time of every cance. The ourse is to be sailed once around, unless otherwise ordered. The rules governing the Staten Island and Idle Hour Regatus of 1870 will govern these races. The winner carries the whip one week, and must deliver it to the winner at the termination of the next race, or be suspended by the Regatus Committee for one month. No excuses for non-delivery shall be accepted. A walk-over shall be a race, but the cruises named above There will be one sailing and one paddling race on each day for cented. NOTES AND QUERIES.

WHIP-POOR-WILL.—Washinton, D. C., May 8(h.—Am glad to see your "Notes and Queries." Now perhaps I may learn what I have been wondering about in a razuc way, ever since when a boy in South Carolina I heard the whip-poor-will's nightly note, Who first gave to this bird its name? Where did it originate? Can any of your readers enlighten me on this point? WILL.

for and taken the second bottle she was able to it care of her own room and walk out to her nei bor's, and she has improved all the time sin My wife and children also have derived gr efit from their use. W. B. HATHAWAY, Agt. U. S. Ex. Co.

An Enthusiastic Indorsement.

Gents-Whoever you are, I don't know; but, thank the Lord and feel grateful to you to know; but thank the Lord and feel grateful to you to know that in this world of adulterated medicines them is one compound that proves and does all had vertises to do, and more. For the control of the compound that proves and does all had said in extent that the least excitement would make me shake like the gave. Last May I wan induced to try Hop Bitters. I used one but lebe but did not see any change; another did so shange my nerves that they are now as steady is they ever were. It used to thank on the steady is they ever were. It used to thank on the steady is they ever were. It used to thank on the steady is they ever were. It used to thank our writes this, and good as a steady is the seen of the steady Now, if you confinue to manufacture as bone and good an article as you do, you will accum-late an honest fortune, and confer the greate blessing on your fellow-men that was ever of ferred on mank nd. TIM BURCH.

Duty to Others.

Duty to Others.

Chambersburg, July 25, 1875.
This is to let the people know that 1, Anna Maria Krider, wife of Tobias Krider, alm obsessed to the people know that 1, Anna Maria Krider, wife of Tobias Krider, alm obsessed to the people with weakness, bad cough, drspessa, great debility and constipation of the bowels. I was so miserable 1 could hardly cat unything. I heard of Hop Bitters and was resolved to try them. I have only used three bottless and in My bowels are regular, my appelite good, and cough all gone. I feel so well that I think it my dury to let the people know, as so many knew how bad I was, what the medicine has done for me so they can cure i hemselves with it.

A Rich Lady's Experience.

A RICH Littly S EAPERAGENCE.

I traveled all over Europe and other foreign countries at a cost of thousands of dollars it countries at a cost of thousands of dollars it countries and disheartened, and was restore to real youthful health and spirits with less that two littless of Hop Bitters. I hope others may profit by my experience and stay at home.

A LADY, Augusta, Me.

A Lovely Chaplet.

A Lovely Chaplet.

A late fashion report says: Nothing can b prettier than a chaplet of hop vines in blossom at recent needled review says: Nothing can b better as a general removator of the health that plenty of Hop Bitters. They sid in all the operations of nature; toning up the weak stomact saksiting the food to become properly assimilated, and promoting healty action in all the or game. The dictatios of health, a like favor a right application of hops.

My mother says Hop Bitters are the only thin that will keep her from her old and severe a noise of paralysis and headache.—Ed. Ostery Sun.

Don't Use Stimulants.

Use nature's real brain and nerve food an nourishing tonic, Hop Bitters, that quiets to nerves, invigorates the body, cures discuse an restores the vital energies without intoxicating

Delevan, Wis., Sept. 24, 1878.
Gents-I have taken not quite one bottle the Hop Bitters. I was a feedle old man of when I got it. To-lay I am as active and red well as I didn't thirty. I see a great many the need such a medicine.

Monroe, Mich., Sept. 25, 1875.
Sits—I have been taking Hop Bitters for h
flammation of kindeys and bindder: it has dor
for me what four doctors falled to do. The e
fect of the bitters seemed like magic to me
W. L. CARTES

If you have a sick friend whose life is a but den, one bottle of Hop Bitters may testore the friend to perfect health and happiness. Will yo see that that friend has a bottle at once.

Paulding, Ohio, Feb. 2, 1880. Hop Bitters Co.:— Have used two bottles of Hop Bitters in n unity, and think them the best ever made. GEO, W, POTTELL, finaker,

KENDALL'S SPAVIN

The Most Successful Remedy ver discovered, as it is certain in its ef-cets and does not blister. READ PROOF

From Rev. P. N. GRANGER,

From Rev. P. N. GRANGER,
Presiding Eider of the St. Albana Districtor I will say that my experience with Kendalis, Spario Cure has been very satisfactory indeed.

Three or four years ago I procured a bottle or Jour agent, and with it cure a horse of lameyour agent, and with it cure a horse of lamebecame very lame and I turned blim out for a few
weeks when he became better, but when I put
him on the road he grew worse, when I discovered that a ring-home was forming. I producted as
than a bottle cured him so that he is not lame,
mether can the bundh be found.

Special to the Readers of this Journal!!

THE UNDERSIGNED respectfully invite an examination of this page, and promise that the time thus spent by any person interested in sewing, shall be profitably invested.

DO NOT BE PREVENTED from doing this because you think you know all about Sewing Machines, or imagine that one machine is just as good as another, or that the one you have is the best.

We freely admit the comparative merits of the leading machines now on the Market, but claim that

This Machine stands far apart from and ahead of all others in the World,

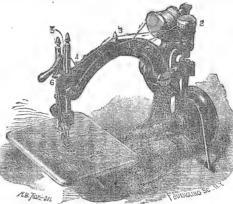

ON THE SIMPLE GROUND OF-

The CREAT DIFFERENCE and SUPERIORITY of its MAKE and LEADING FEATURES.

To make this apparent, we submit the following Illustrations showing different parts of the Machine:-

Fig. 1—Descriptive Cut of the "Automatic."

The Spool is placed in a horizontal position on Spool pin, from which the thread is unwound, without revolving the spool, by Pull-off; the thread is then taken by the "Automatic Tension Device," and perfect seams obtained on all the various kinds of material, with any size of thread or silk, without depending in the least upon the judgment, skill or experience of the operator. This cannot be truthfully said of any other Sewing Machine.

Most of the movements of this machine are rotary, the reciprocating motions being produced by eccentrics, and a very high rate of speed being consequently attainable — as high as three thousand stitches per minute—with perfection of ease and light running, and without the slightest detriment to the machine, or to the regularity or strength of the seam. No other sewing machine can approach it in this respect. It is absolutely silent and unequaled in durability.

The Term "Automatic" or "No Tension," was never used in connection with Sewing Machines until we introduced this Machine in 1875. The popular favor awarded to it instantly caused other Companies to imitate the phraseology of our advertisements. No person who takes the trouble to investigate can be deceived by such a course, but unfortunately for themselves, many persons do not investigate, but allow themselves to be prejudiced.

Fig. 2-Showing manner of obtaining correct length of Stitch.

To make length of stitch required, move the handle of Stitch Regulator till the proper number appears through the opening. It is impossible to do imperfect work, and accidental ripping is entirely avoided.

CHICAGO LAWYERS IN THE BRITISH WILDERNESS

God never did make a more calm, quiet and innocent recreation

E pity the man who would not gladly travel a thousand miles for the sport we are now enjoying. The scenery, the climate and the fishing continue to fill our bodies with vigor and our spirits with enthu-

We had long heard of this as a famous trout stream and in no respect are we disappointed. If the traveler on the Hudson admires its Palisades, we look in admiration on towering cliffs two hundred feet high; if other fishermen glow with enthusiasm in capturing the trout of Northern Michigan, or Maine and the Adirondacks, we are landing those which, in a nobler stream, grow to far larger proportions. A single trout landed yesterday would fully furnish the head of the family table of any of our friends, and our saddest thought is that we are so far away as to render that impossible.

Our party is organized with a view to do ample justice to the attractions of this northern wilderness: James L. High, John Lyle King, Joseph E. Bonfield and myself, lawyers, and Lorenzo Pratt, Esq., who, though not technically a lawyer, has mingled sufficiently with the profession to entitle him to associate in the ranks established by good old Father Izaak of "anglers and very honest men.

Why s it that lawyers are such fishermen? There are two parties now on the river besides our own, and nearly every member is a lawyer. To atone for the two non-professionals, two of the lawyers from Louisiana have brought their wives, said to be the first white women who have ever ascended this river. We have found the same thing true in other trips.

This river being the outlet of the lake of the same name lying about forty miles north, is one of the most important streams on the north shore of Lake Superior, and except when contracted into narrows or rapids, is from fifteen to thirty rods wide, and for about ten miles of its length it widens into lakes varying from half a mile to two miles in width. Most of the good fishing is in the upper half of the river, and much of that is of such a character that no experienced angler would think of fishing it. The good fishing lies in the pools, rapids

and other short stretches, which would aggregate prob ably four or five miles of river, within which the fisher man should confine his efforts.

For years we had had this trip in expectation-not ac complished on account of the reported difficulty of reaching here, and the time occupied in going and returning. But having set our hearts on coming this season, diligent investigation revealed a practicable and speedy route, and the trip has developed less delays and difficulties than we had feared. The trouble has been that in order to reach Red Rock, at the mouth of Nepigon River, it is necessary for the steamers to ascend Nepigon Bay, nearly forty miles, thus carrying them farther out of their course than they are willing to go. But now two steamers of the North Shore Line stop regularly at Red Rock, and by arranging to meet one of these at Sault St. Marie or Duluth the whole trip is made easy and delightful. It is probable that the accommodations for next season will be more complete and better under-

Like ancient Gaul, this journey was divided into three Like ancient Gaul, this journey was divided into three parts—the first by rail to Duluth, the second by steamer to Red Rock, the third, which is the only one which now concerns us, is by birch bark canoes, which are the inseparable companions of sportsmen on those waters. In just three days after leaving Chicago we were on this river, which, though flowing through an unbroken will-derness to-day, has been regularly traveled by the hardy agents of the Hudson Bay Company long before the first white settler arrived in Chicago.

white settler arrived in Chicago.

THE INDIANS.

From the various wipwams, as well as from the Mission two miles up the river, the Indians flocked about, not thrusting their services upon us as guides, but judiciously waiting to be engaged; and when the six were selected they commenced getting the canoes in readiness and packing up the camp equipage and supplies, while we were discarding the garments which Chesterfield considered the true test of an English gentleman, and substituting those which would better answer our present purpose. It was a handsome sight—our three canoes working up the rapids, the Indians shouting and whooping, apparently chaffing one another in their rude Chippewa dialect, and as they disappeared around a bend in the river we less romantically followed the track across the point, and in a few moments were joined by our Indians, when we learned that they must stop for breakfast. To those unfamiliar with Indian ways, it may seem a little strange that these simple children of nature should not have breakfasted, as usual, several hours before. It was a lucky thing that High's letter to the Company's agent had not arrived, as expected, three days before us. For if, as could easily be demonstrated, no Indian within two miles of the poot, capable of acting as a guide, had breakfasted at 11 o'clock, and all in anticipation of a contingent breakfast as guide to five unheralded sportsmen arriving late the evening before, what must have been the result had the vision of these possible breakfasts in expectation, or contingency, been opened before a larger number of these innocent wards of the nation? But once in a cance the Indian appears at his best. He knows just what he can safely do and what he can not what rapidle her tirough; howswift a current he can pole her up, and how many awkward white men he can carry in her without letting any of them tumble out. He is also good in an emergency. The first day out our largest cance, valued as carrying our respected friends High and Pratt, and also as tra was and the swift water another with a new was in the swift water alove, we was in the swift water another up, and how many awkward white men he can carry in her without letting any of them tumble out. He is also good in an emergency. The first day out our largest cance, valued as carrying our respected friends High and Pratt, and also as transporting our principal commissary supplies, ran upon a rock and stove a hole in the bottom, through which the water rushed in furiously, half filling her before she could reach the shore. She was emptied instantly, turned on the bank and quickly inspected. The bark covering was torn off over a space at least two feet square. Of the four Indians in council, one started into the woods with an axe, another built a fire and prepared the pan of pitchy compound which they always carry, while the others, with their knives, cut away all the damaged bark, and then moved the ribs and lining until a regular hole was exposed, through which a man might easily crawl. By this time the first cartsman had returned from the woods with an ample supply of birch bark, which they did in the passion of the contest. The rapid current and the frail of the cance, leaving a wide lapping of the bark on every side. Then they replaced the ribs and lining, bored little holes all along the edges of the original bark, into which they drove wooden pegs, and finally, after a liberal smearing of pitch are added, and the frail craft is launched as seaworthy as ever, and rides as beautifully as though she were built by a worthy master, and might long 'laung' at all disastor."

There is an Indian legend to the effect that once the birch trees grew perfectly smooth and straight, and with the case of the same concentrol, or our lining would be crossed and entangled, and both fish problems.

no branches till near the top. But as the Great Spirit—Nana-Bijoo—was going through the country, to see whether everything was as it should be, he found that the Indians were too lazy; so he took a bunch of willow twigs and whipped the birch trees, bringing out knots all over them, thus making it much harder to build a cance. This is the only thing which the Indian has against his God, and for this he has never quite forgiven him. But aside from a few good points in woodcraft and watercraft, it is difficult to find anyone who has ever had much to do with the Indian who has much faith in him, or in the prospect of doing anything for him. In his native state he is a heathen. Brought into contact with the white race, he at once contracts their vices, and cannot be taught their virtues. His last condition is worse than his first. The Jesuits have sustained missions along the north shore for over two hundred years, and what have they accomplished? His destiny is like that of other inferior races—to die out before the superior, and because they are not, except in rare instances, capable of civilization.

THE PERFECTION OF FISHING,

pable of civilization.

THE PERFECTION OF FISHING.

Saturday morning, as the Indians were breaking camp, Bonfield and myself ran out in the smallest cance to a riffle opposite the point, where we had raised several fish the evening before, and anchored in the stream. At almost the first cast a two pounder rose to his fly, and in another moment I had his mate running down stream at the end of my line. Before I had landed my fish Bonfield had hooked his second, and while he was plunging him Pratt came to the point and shouted to us to come him, as they were ready to go on. But after weighing my fish, and finding that Bonfield had at least five minutes, work before him yet, I naturally throw my fly in again, and quick as a flash out spun the line as a noble fish struck out for the middle of the river. This was encouraging to us, but discouraging to the others, who had set their hearts on pushing ahead. Pratt, at the point, was reinforced by High and King, who exacted the promise that we would come in as soon as we had landed our present fish. While we were thus enjoying the first really fine fishing on the river they were suggesting all sorts of speedy methods, not content with giving the lively creatures their legitimate enjoyment of the angler's skill. Bonfield, on landing his second fish, considerately placed his rod in the boat, lest another cast should anchor him to a third, and then all the energies of the party were concentrated upon my expeditious capture of what proved to be a three and a quarter pound fish. Then, reluctantly, we joined the other cances, fearing lest another stopping place might not develop as ively sport and our piscatorial appetites sharpened to the keenest edge by this taste of the famous fishing on this far-famed river.

At noon we pitched our camp at the edge of a small far-famed river

At noon we pitched our camp at the edge of a small waterfall, the large pool below which promised well. From 3 to 4 o'clock the whole party whipped this pool in every part, and with every variety of fly. We tried the shallow water and the deep, the swift water and the quiet, the eddies and the swirts, the center and the crapids and rocks opposite—but all in vain. Not a single trout showed his glittering side, or even deigned to inspect the feathery cheat which we lightly drew over the surface of the water.

Bonfield and I were in agony, and our sorrow's crown of sorrow was remembering happier things. Feeling that

Bonfield and I were in agony, and our sorrow's crown of sorrow was remembering happier things. Feeling that our only hope now was in the swift water above, we made the short portage around the falls, and worked our way upward toward a broad and handsome rifle, where for at least forty yards the roughness of the rocky bottom was duplicated at the surface of the swift water six feet above. Across half its breadth the current was rapid as a mill tail, and the united efforts of our Indians at their setting poles were required to hold the canoe in position. Only when they could get them wedged into revices between the rocks could they succeed in holding her against the sweeping current of the full river, rushing toward the falls.

ably escape. High and King, from their cames on the opposite side of the river, alternately applicated and chafful us, while the Indians sounded the whosp to, our signal for attention and encouragement. Bouffeld would succeed in working his fish toward the boat, when off, havould so again like a shot, and mine would seem to take the signal and carry out the line with the familiar zip so dear to the angler's car. The finest music in the world is rived to the angler's car. The finest music in the world is rived to the angler's car. The finest music in the world is rived to the capture of the course is that of a well-made trout rod, held with all the pressure it will safely bear. For the true enjoyment of both we need a light canoe and a rapid, rolling river. But our fish scened impressed with the importance of the occasion, though possibly not touched with the state of the occasion, though possibly not touched with the approximation of the occasion, though possibly not touched with the approximation of the occasion, though possibly not touched with the properties of the state of the care and the first look they would turn and dark away as though discerning an evil omen in our auxious eyes. Finally, Bonfield swung his his toward the low of the canoe and brought up his fish, which William skillfully netted at the same time disclosing the dangerous fact that the movement had crossed my line; but huckly a short and brought both of the rip thus far, and the scates were strongly applied. Bonfield had four and a half pounds and I had three and five eights.

From that time until sunset one or the other was almost constantly employed with a trout of two pounds or upward. Twice Bonfield had four and a half pounds and I had three and five eights.

From that time until sunset one or the other was almost constantly employed with a rivout of two pounds or upward. Twice Bonfield are win his fly, saying that hwas satisfied; but the sight of my bent rod each time proved too great a temptation, and in a few casts a three pounds an broke the single octice of materies and some consist.

Conquerors are sometimes vamiglorious: Bissell, let us drink to ourselves." Bonfield wanted to have two camp fires lighted, one on each side of our fish, and sit up all night looking

selves." Bonfield wanted to have two camp fires lighted, one on each side of our fish, and sit up all night looking at them.

Thus might have ended a glorious day; but Nature now claims our attention. Our camp faced the north, as befitted the direction of our wanderings, and suddenly; a bright aurora was displayed before us. The whole northern heavens were lighted brilliantly, and belts and bands and streamers of electric light shaped and unfolded themselves before our delighted eyes, and faded slowly ways to give place to new forms of fleeting glory. Soon these changeful, uncertain phantoms began to shape themselves into more regular outline and distinguishable substance, and forming into a grand aerial procession from below Cassiopeda's Chair on the right, ranging nearly to mid-heaven, and then down far beyond the last star in Uras Major. They moved in bright array across the sky, like the hundred spokes of a grand celestial wheel, slowly turning toward the west, new shafts of light ever springing up in the east as the first sank to the western horizon. The postical longing of the heart hes always been said to be toward the east, but with us traveling northward all the dedicts of water, forest and sky seem to allure and inspire us still toward the north.

In Camp on Nepigon River, Aug. 24th, 1870.

(To be continued.)

refined and cultivated gentlemen, who were formerly the slaveholders, and large skaveholders, and who controlled the sentiment and politics of the South; and now, since the fortune of war has gone against them, they have buried the hatchet, and will be found ever ready to smoke the pipe of peace with their Northern brethren, and will go as far as any men toward maintaining the honor and glory of America. An apt illustration may be found in the pleasant intercourse and relations which exist between your correspondent, who was one of "Lee's miserables," and a neighbor, who was a gallant Union soldier, settled here since the war. Both of us are keen sportsmen, fond of dogs and guns, and during the hunting season we are together in the fields and forests after partridge, pheasants who controlled the sentiment

dogs and guns, and during the hunting season we are together in the fields and forests after partridge, pheusants and wild turkeys, and when night comes we have a pleusant chat over the last number of Forest AND STREAM.

The region to which I call the attention of your readers is the southerstern part of South Carolina, between the Combahee and Savannah rivers. In November, 1861, the battery in which your correspondent was a commissioned officer was sent from Richmond and reported to General Lee at Coosawhatchie, and was assigned to duty in the district above mentioned, to guard the Charleston and Savannah Railroad from any raid from the direction of Port Royal. There we remained during the winter and spring of 1882, stationed for the greater part of the time on one of the inlets of the sea separating the mainland from the far-famed "Sea Islands." Our military operations during this period were of no importance, and we lad nothing in the way of fighting beyond an occasional from the life-limea. 'Sea Islands.' Our mintary opera-tions during this period were of no importance, and we had nothing in the way of lighting beyond an occasional masking of a battery against one of the "Lincum gun-boats," in which we frequently came out second best. In our first rencontre with these monsters we lost all In our first rencontre with these monsters we lost an our tents, and being unable to procure others, we had to spend the whole of the winter under the spacions canopy of the gigantic live cads of that country, or in brush huts. The climate, however, was so mild, resembling that of Eastern Florida, that we experienced no inconvenience from our loss putil the approach of support venience from our loss until the approach of summer.

There being no enemy to fight, we had no difficu-

that of Eastern Florida, that we experienced no inconvenience from our loss until the approach of summer. There being no enemy to fight, we had no difficulty (two of its who were sportsame) in obtaining leave to hunt or fish, every day or so. In this delightful way we passed the time. We had carried with us from Virginia a rifle and a double-barrel shot gun; and although what is known by sportsamen as "shot" were not to be obtained for love or money, we never failed to procure abundance of powder and lead from unexploded shrapnel, the lead from which we manufactured into bullets for the ritle, and slugs for the shot gun. It was by mere chance that we discovered what a sportsman's paradise we were in. The Confederate commissariat being proverbially lean, I proposed one day to go out with one of the men, who was an excellent huntsman, to see if I could not find game. So off we went into an extensive forest, bordering on one of those dismal swamps which constitute a distinguishing feature of the South, which here, as elsewhere, is made intricate and difficult of access by reason of the countless parasitical vines, many evergreen, which cover nearly every tree, and which with the peculiar gray moss hang in festoous from branch to branch, lending that weird and sombre cast to the scene which is so impressive.

impressive. Observing that there were one or more nests in nearly every free covered with vines, I requested my companion to pull one of the vines which ran up to the most promising looking nest near me. He did so, and out ran a squirel, which I shot. We continued this operation, nest shaking, for some time, until we had secured as many squirrels as we desired, an opossum, and two or three raccoons. On our return toward the camp we discovered a large covey of partridge (Ortyx virginianus) on the ground, and having no dog, and being hungry for such delicious game. I thought myself justified in firing on the ground, and liaving no dog, and being hungry for such delicious game, I thought myself justified in firing at them on the ground, which I did, killing about half of the covey. Having some excellent cooks, upon our return to camp we were in a few hours enjoying broiled partridge, roasted opossun and squirrel stew, with appetites only possessed by men who had been confined to hard tack and salt pork, and living in the open air. It should have been stated that the squirrels we killed, and which abound in this region in immense numbers, were the fox-squirrel, and principally the Carolina gray squirrel (S. Carolinensis), which is rather smaller than the gray squirrel of our Northern States, and its flesh is much more highly esteemed. more highly esteemed.

terminated our first day's hunting, which af-

more highly esteemed.

Thus terminated our first day's hunting, which afforded us, though the game was small, as much exquisite enjoyment as the Rocky Mountain hunter experiences from the killing of a fierce grizzly, or the lordly bison. Subsequent excursions in the forests and on the streams disclosed nobler game in great abundance, of which I will hereafter give you a detailed account.

The next few days were employed by us in reconnoitering the country on the mainland between Bee's Creek and the Combabee River. The greater part was in swamps and original forest, interspersed by magnificent rice and cotton plantations, owned mostly by wealthy planters, whose residences were generally on the rivers and inlets, with Landsome lawns running down to the water's edge. All were supplied with pretty and well-built row and sail boats, moored in safe places. But we seldom saw a house which was occupied by the owner or his family. They had nearly all left their houses deserted, and gone to the interior to what is known as the "pine barrens," or to one of the neighboring cities.

The cotton grown in this section is known as the "Sea Island" or long staple, companding a higher price than any other; and the rice is said to be of heter mailty.

one of the neighboring cities.

The cotton grown in this section is known as the "Sea Island" or long staple, commanding a higher price than any other; and the rice is said to be of better quality than that raised elsewhere. Many of the rice plantations, which are all on the streams, were in a high state of improvement, although the modes of culture scemed to be very primitive, and some had been in operation since colonial times. Many of the owners bear names known to fortune and to fame, identified with the history of their State; and the owner of one beautiful plantation I visited on the Combahee River bears a name rendered illustrious by an ancestor who signed the Declaration of Independence. I entered many of these descreted homes, and was struck very forcibly by a fact which sheds a world of light on the political opinions and prejudices of these people. On the walls of nearly every house was hung a portrail or engraving of John C-Cathoun, just as we generally see in Virginia houses the picture of George Washington.

The vegetation of the district bears a strong resemblance. Josian II. Bissell.

tention has been so frequently drawn, the most striking being the magnificent magnolias, palmetto, live-oaks, bay, yellow jasmine, etc. Of the fauna I will write more particularly hereafter.

North Side, Va.

NORTHERN MICHIGAN.

DLACK RIVER rises among a few small lakes in the northern part of Michigan, winding for many miles through a wild, unbroken country. It empties into, or more properly runs through Black Lake for a short distance, along the northwest portion of the lake, leaving it as its outlet, running for a distance of about twenty miles, emptying into Cheboygan River a few miles above Cheboygan City. The water is a clear, transparent black, and is one of those narrow, rapid streams peculiar to northern Michigan. It is passable for steam tugs for about five or six miles from its mouth to the foot of the rapids; these extend about five miles, and run, not as a turbulent, boiling stream, but as though the water was thoroughly oiled. There are many rocks and boulders in the stream, but few of which stir up anything like a warm reception. These rapids can be run with a light boat with much enjoyment, but with these, as with all others, it is best to have some one experienced to manage affairs. For about three nuites above the rapids to Black Lake has to be made by conveyance, carrying boat and outfit from Cheboygan to the bead of the rapids, where the road terminates. Here everything is dumped from the wagon; boat lameched, stocked with tents, guns, provisions, and all the necessary fixings for a few days' enjoyment away from everybody but your own company. From this lauding place you will have a pull of three niles up as beautiful a stream as Northern Michigan is proud of. What is peculiar about the shores of this stream is the hurd wood underbrush and the lack of pine and cedar with which most of the streams are lined, and also the absence of the sand and mart. On the route from Cheboygan to the head of the rapids, you will pass a few farms beautiful a stream as Northern Michigan is proud of. What is peculiar about the shores of this stream is the hurd wood underbrush and the lack of pine and cedar with which most of the streams are lined, and also the absence of the sand and mart. On the route from Cheboygan to the head of the

apology, as I'am well satisfied it is a nucli more excel-lent country than it has credit for being, and the time is not far distant when this territory will be opened up by railroads and will be thickly settled.

From the kinding of our boat above the rapids we had an excellent sail. Yes, I say we had an excellent sail up that crooked and beautiful river. Our old friend, Dave Smith, made the discovery that the wind, which was blowing quite steadily, was directly up our course, and-he rigged up as handsome a sail as one would wish to look at. Cutting three poles, one about ten feet long for a mainmast, and two shorter, one for a cross pole at the top, and the other extending diagonally across the sail for support, and with a bed quilt for a sail, we were as elegantly fixed as a squaw in a red shawh, no hat and barefooted.

At Black Lake deer and bear are quite plentiful, and

t Black Lake deer and bear are quite plentiful, and

soleganity fixed as a squaw in a red shawl, no hat and barefooted.

At Black Lake deer and bear are quite plentiful, and fishing excellent.

A slight snow had fallen the night before the first day's hand, and all were up bright and early, each anxions for the first shot at a deer or bear. We had no hounds or dogs of any species (which manner of hunting for deer I desire to be recorded as being decidedly opposed to).

Taking separate directions in the woods for a still hunt for anything that might accidentally or otherwise stumble over us, but a short, time clapsed before the sharp crack of a rile signaled something in danger. In about ten minutes another in the same direction, and then another, followed by a fusilade of a number of shots in rupid succession. All hands made for the direction of the firing as rapidly as possible, learing that one of the party must certainly have by that time a "hot box." Coming in sight of the gentleman with the Winchester, he was discovered with knees bent, arms at elbow slightly extended, butt of gun on ground, and when within short hailing distance a "Hallo! what's the matter?" came from one of the party. No answer, Again, "Hallo!" no answer. Upon coming up to him, found a very white face on a very shaky individual; an empty gun, and a dead doe a few yards from him, indicating one good shot. Upon becoming sufficiently composed to talk, found he had knocked over the doe, killing it the first shot, and had walked up pearly to it when a slight rustling ahead attracted his attention, and there stood a buck, with head and tail up. He fired at and slightly wounded him, the red spots on the snow proving this. Scarcely had the snowle cleared away when up came another buck from the opposite direction. A shot produced no change in the deer's course but a halt; another shot, and then the balance of the shells from his chamber and three or four snaps with an empty gun, and a deed doe a change in the deer's course but a halt; another shot, and then the balance of the shells from his chambe

this year take charge. He is a very pleasant gentleman, and one whose well and neatly spread table, under the supervision of his handsome daughter, all will remember who have stopped for neals at Marcelona.

On the inland route, at the head of Crooked Lake, are a couple of smaller hotels and a couple of "floating palaces," i. e., large flat boats deeked, roomed, carpeted and fitted up in shape to be towed to any point on the inland route parties who charter them may wish; and on Crooked River there are a couple of primitives.

At the head of Indian River we came to our old and true friend, Capt. Dave. Smith, at whose place I make my headquarters, and whose equal in the woods I have never net. Go there; stop with him; he will take care of you, and well, too.

At the head of Mullet Lake 'a new building has, gone up, which looks large enough for a senside house; and thence on across Mullet Lake into Cheboygan River, passing the mouth of our Black Eake.

MY TAME OWL.

MY TAME OWL.

Editor Forest and Stream:—
Noticing some letters in the paper recently about owls, I want to give my experience in taming one. Some time since I wrote a letter about a tame starling, At the time we kept Jack (the starling), we were never without something in the house that belonged to species supposed to be wild, and impossible to tame, but my mother never gave up until her kindness and love for these wild creatures overcame their fear; and they would soon come at her call and feed from her hands. We have kept a young leveret, a hedge-hog (Erinaceus europeaus), a woolly rabbit, and the tame starling, all at the same time, and it was fun to watch a big, tawny tomcat sitting on the broad window sill, with eyes dilated and tail quivering, yet not daring to spring at any of them. I presume we were never without a hedge-hog in the kitchen. My home was the manager's house in a large mill, and sometimes beetles and such insects would find their way into the kitchen. Dick would keep the place clear of them, and sit watching for them as eagerly as does a cat for nice.

nice.

I grew up from boyhood with the love of such animals and birds strongly ingrained in my naturo.

In the happy courting days, the younger brother of the family where I visited caught a young owl and brought it home. The girls, of course, were scared at the fussing, spiteful young thing. How to feed it was the question. I was a fair shot, and had a strong-shooting 10-gauge Manton gun. Around the old mill sparrows fairly swarmed, so we easily got young sparrows and mice for him.

ing 10-gauge Manton gun. Around the old mill sparrows fairly swarmed, so we easily got young sparrows and mice for him.

He grow famously strong of wing and a fine bird, and soon began to know my voice, and unless some one opened the door of the out-house or kitchen where he was kept, he would commence such a hissing that would surprise any one not knowing him. If one of the family opened the door he would instantly sweep along the hall, without a sound, into the room where I was quietly taking to my lady friend, and drop on my shoulder. If we pretended not to notice him he would turn his head to my ear and let out a gentle hi-s-s. Sometimes we would say: "Well, what do you want?" He would stick his head around to my face and give another gentle hi-s-s. Sometimes we would tease him by taking him before a large mitror—up would go his feathers in an instant, and a hi-s-s, almost like a growl, would greet the ear, but he became too smart to get fooled that way, and when I took him to the mirror he was instantly on the lookout for sparrows. When he was on the right shoulder, I would pull a sparrow quietly out of my pocket, hold it up in the left hand so that he could see it in the glass. He was around to that shoulder and the sparrow in his beak or takons as quick as a flash. Often, before I could turn around to see him, he was or the right shoulder, along the hall, and into the cage. One sparrow at night generally satisfied him. I supplied him with small game for nearly a year. To me he was ever gentle, never scratching, or pecking me, even though I did tease him a little. The mother of the family died, the brother was a difficult matter to have the ovyl properly fed and cleaned, and they disliked putting him in a stranger's hands who did not understand him, so he was taken to a taxidermisk, who killed and mounted him. I married soon after, and one of the principal ornaments of my first nest was the togue. He was a handsome bird, admired by all who visited us in our new home, and certainly looked larger than owls

A VOICE FOR THE SPARROWS.

Editor Forest and Stream :-

Editor Forest and Stream:—
I am no ornithologist, and iside from a lively interest in birds as harbingers of spring and beautifiers of our fields and woods by their presence and songs, know very little about "then. But it seems to me all this big talk about "the sparrow nuisance" is decidedly far fetched; the "professors" to the contrary notwithstanding. It would seem that the treatment of Passer domesticus does not accord with the proverbial friendliness of the American people toward foreign visitors. It is unseemly and wrong, because the English sparrow would not consent to act as a vermifuge for the Park Commissioners, to breathe out threatenings and slaughter through the medium of exterminatory laws.

breathe out threatenings and slaughter through the medium of exterminatory laws.

In the village where I live the sparrow has been a resident about four years, and in that time (I say it unblushingly) I have learned to love him. And who with any admiration for bustle and stire could help loving this brisk, eleery little fellow? He is not beauliful, but there is a staid respectability about that sober, mottled coat that commands a certain degree of deference from thinking reople. In midwinter, when the snow is deepest and the

air coldest; when even the hardy snow-bird thinks twice before venturing out then the sparrow is in the height of his glory. His ummusical but not disagreeable "theet, tweet," rings through the frosty air with an irresistibly exhibitanting effect, and in passing back and forth between my business and home I have starred the compact little flocks from their foraging grounds in the snow; and at their startling "whire," up would; come my came with an instinct born of a little field experience, and I would almost imagine myself covering a bevy as they whisked over the nearest wall.

Sparrows may destroy fruit, but I never noticed them working on mine, and have never heard any complaints from my neighbors in that direction, although! I have seen them often in my yard in considerable numbers. The nearest approach to fruit filching that ever came under my observation was one day last winter, when I noticed a flock vainly pecking away at some frozen apples left hanging on a neighboring tree. But they acted as if they were working under protest, and soon gave up. That they are omnivorous I know, not from dissection, but observation. They will eat anything, and the sweepings of a restaurant are "muts" to them. Good scavenegers are they, and the sportsmen of Alexandria made a mistake when they offered a bounty on their heads; for unless a marked change has come over that ancient "burg" since I visited it a year ago—it is as dirty a place as hies unquarantined.

The question now will be, Which is preferable, the small boy armed with a pot-metal guu loaded with mustard seed shot, scouring the streets of Alexandria for a pot shot at the sparrows, or the birds rhemselves?

In the face of all opposition I boldly assert that the sparrow has not yet been proven a nuisance in the full sense of the term. Flaws may be picked in his character, no doubt, but the same may be said of any bird, and so long as he is non-migratory, giving us the benefit of his cheering presence during the winter, when all the other so-called native birds little stranger.

Dansville, N. Y., April 23d.

Spring Field Nores,—Cleveland, Ohio, May 5th.—Editor Forest and Stream:—I killed a Kirtland wardler yesterday—male bird, in perfect plumage. So little is known of this—one of the rarest of wardlers—that I hasten to give the result of my five ninutes' observations. I found him in a patch of bushes and briers. When I first saw him, he was perched on a low bush, and several times made sallies after insects, returning to the same perch. At no time was he over two feet from the ground. He was more like a small tycatcher than a warbler in his actions, and for quite a while I took him to be one, paying no particular attention to him. A short flight, a change of base, and an in-flycatcher-like hop after alighting, sealed his fate. His nicasurements are: stretch, 9; length, 5.89; wing, 2.75; tail, 2.55.
My record of arrivals this spring, differing somewhat from one from this place which you printed a short time ago, I send a copy, mentioning only the results of my own observations.

H. E. Chubb.

The vernal migration of birds to Nova Scotia has been The vernal migration of birds to Nova Scotia has been characterized this spring by very unusual occurrences. The peculiar weather had, no doubt, much to do with this; for, owing to its unusual severity from the first to the third week in March, we did not observe the wild gees going north before the 21st. A few days of nid weather then brought large numbers to our eastern shores, but during the last week of the month a relapse to bitter cold winds and hard frost took place, which had terrible effect upon the poor geese, rendering them so Awahoose, Awahoose,

weak and tame that numbers were killed, some even without the aid of powder and shot. Quantities were sent for sale to Halifax, some selfing as low as 25 cmts apiece. The spring of 1880 will long be remembered on our coast, for the most remarkable visitation of wild geese known in the memory of the present generation. The cold weather continued without intermission, accompanied by one or two heavy snow-storms, until April 19th, when the thermometer rapidly rose, and the weather became mild, and, to the astonishment of the most observant, Halifax and its neighborhood was visited by such a concourse of fox sparrows (Passerella diaea), song sparrows (Melospiza melodin, robins (Tardias migratorius), snow birds (Invoe hyemalis) and a few others that the very streets of the submys were literally covered with them; all apparently busily searching for food. A naturalist friend, who lives just on the outskirts of the city, assured me that be did not think there was a single foot of ground in his garden that was not occupied by one or more birds of the species mentioned, the fox sparrow exceeded all others in numbers, and it would be no exaggeration to say that within an area of one square nile there were several thousands.

Such a concourse of migratory birds we have never seen before, either in Europe or America, and it reminded us, more than anything else, of one of those gatherings of storm-blown birds which every few years, about the month of October, alight upon the Bernaudas, when the cedar trees and grassy slopes appear alive with myriads of feathered forms.

We make a few extracts from our own notebook, some

We make a few extracts from our own notebook, some of which may be of a little interest to our readers: April 17th, took male Portana noviboracences near Milford, Conn. This is the earliest record that we have of this species in this latitude, and we should be glad to learn if others have found it earlier.

April 26th.—Observed in Central Park male and female

April 20th.—Observed in Central Park male and lemale Cardinalis virginianus. A male of this species was reported to us a week earlier, but we are not quite certain as to the identification.

May 1st.—Pipilo crythrophthalmus, Mimus carolinensis and Ictirus baltimore.

According to our limited observations this spring, most birds are about eight or ten days in advance of the Cardinalis virginianus.

usual time.

That Shower of Words.—I have been under the impression myself until this spring, from many assurances, that, as mentioned by "J. C. L.," such showers do occur; but upon examination I am satisfied the belief is erroneous. In front of our State Capitol building, extending from the flight of stairs at its entrance to the main street, is an asphaltum walk about sixty feet wide by two hundred and flfty feet long, with quite an extensive grass plot on either side. Extending around the State House, raised about five feet from the ground, is a terrace. Noticing a few mornings since, after a brisk shower which had fallen during the night, a great many worms on the walk I followed a number of their trails, and they all lead to the grass plot. I then examined the steps and terrace and found a few on the first step, which is only a couple of inches rise from the walk, but none on the balance of the flight or the terrace, which to my mind conclusively exploded the "shower" business.

Columbus, O.

TAMING RUFFED GROUSE,-Our correspondent "G. W. "writing from Maine, briefly relates his experience with ruffed grouse in captivity. He says :-

with ruffed grouse in captivity. Ho says:—

Two years ago I caught a cock and hen partridge in
the fall. I kept them in a common poultry cage, and
they became perfectly tame so as to feed freely from my
hand. I let them go after keeping them about one year,
It is very easy to tame the birds if they are properly fed,

PRAIRIE CHICKENS DRINKING .- Our readers will remember that some time since we published under this heading a note from a correspondent, "N. W.," of New Bedford, Neb. A somewhat more detailed account of the circumstance having been sent to Prof. S. F. Baird, he has kindly forwarded it to us for publication. It rends as follows :

New Bedford, Neb., Nov. 9th, 1879 .- A flock of nine New Bedford, Neb., Nov. 9th, 1879.—A flock of nine prairie chickens flew down, lit on a sand bur in the Plante River, and after looking around for a few minutes walked into the water and began to drink. This they did in rather a peculiar manner. They would open their bills and act just as though they were raining a bire out of something solid, and would then hold up their heads to swallow; but not as high as barn-yard fowl generally do. They stayed on the plot about half an hour, and at times were within thirty feet of me. They were very deliberate about drinking. At other times have seen huge flocks of them on the sand flats drinking just before sunrise and just after sunset, but was never able to get nearer to them than thirty yards.

nearer to them than thirty yards.

Does the Gray Squirrel, Lax up a Winter Stone?

—Febrishurgh, Vt., May 8th.—"Sharpeyes," in the last Forest and Stream, doubts, very justly as I think, whether our common gray squirrel lays up any store for winter. It is the opinion of wood-lunters here that they do not, for what chopp to ever found their store? and who that has frequented woods in winter where these squirrels were living, has not seen where they have dug under the snow for fallen nuts? Our hunters think that they starve out in the winters of poor nut producing years. They are apt to be plenty in the summer and fall of a year following a season when there were many nuts, but if this fall's nut supply is short, there will be almost no gray squirrels the next year. The red squirrel has more resources—the pine and hemlock cores hold a store for him always ready to his paw. John Burroughs, indefatigable writer as he is, is not always infallible, as for instance when he asks in some of his earlier papers:

"Who ever saw a squirrel in winter?" Who that has handled winter woods has not seen the red and the gray?

FLY-FISHING FOR BLACK BASS.

FIRST PAPER.

HAVE, heretofore, conlined my remarks on black-bass angling almost exclusively to natural bait-fishing, and have endeavored to instruct the notice in the use of the most suitable tackle for that method before taking up the subject of artificial-fly fishing. I have also, I hope, been instrumental in causing some fellowangler to discard his long, clumsy and ungainly rod and coarse tackle, and to substitute more delicate and elegant in plements, which, while adding a hundred fold to his own pleasure, has, at the same time, enabled him by precept and example to assist in elevating the noble sport of black-bass angling.

own pleasure, has, at the same time, chaod min's precept and example to assist in elevating the noble sport of black-bass angling.

And now, if I can persuade the expert bait fisher to advance still further, and can induce him to mount the top round of the piscatorial ladder and take up the flyrod, my object will have been accomplished, and my fondest hopes and carnest efforts in behalf of the black bass as a game fish, will thus happily end in fruition.

Artificial fly-fishing holds the same relation to bait shing that poetry does to prose, and, while each method will ever have its enthusiastic addiffers, only he who can skillfully handle the comoly fly-rod, and deffly cast the delicate fly, can enjoy the asihetics of the gentle art. As the lover naturally "drops into poetry" to express the ardent feelings of his soul, "with a world ballad made to his mistress' eyebrow," so the real lover of nature and the finny tribe as naturally takes to fly-fishing, and finds liquid poems in gurgling streams, and pastoral idyls in leafy woods. leafy woods.

THE BLACK BASS FLY-ROD,

liquid poems in gurgling streams, and pastoral loyls in leafy woods.

E. In a paper on rods, several years ago, I made the statement that the American trout fly-rod was the very perfection of lishing rods, and that all other rods should conform as nearly as possible to said model or typical rod, commensured with the manner of service required for them. Uponthis principle, an honest and well-made frout-fly rod, weighing from eight to nine ounces, answers admirably for black bass fly-fishing; and, fortunately, a suitable rod of this character can be procured from any first class maker; but I would caution the new hand against the many cheap rods now in the market.

A good rod can only be obtained at a fair price.

At the sate of the would here enter my protest against he ighthat and "withhiest" trout fly-rods, weighing from six to seem ounces, being used or recommended for black bass fishing. Such rods are but toys at the best, and only admissible for fingerlings or trout weighing from a half pound downwards. I know that some angles maker a boast of using such rods, but it is on a par with some gunners who rush to the extreme in light shot guns, and claim that a sixteen or twenty bore is capable of as good general execution as the larger gauges. Now these are both palpable fallacies, as great as that of "sending a coy to mill" in the "History of the Four Kings," as many have found to their cost.

I am a great stickler for extreme lightness in rods when compatible with strength and nation, as all who have read my previous papers on black bass minnow-rods will affirm; but there is a certain limit in weight that must be observed, so as to conform to and preserve other and equally sensing large and the prevention of the consumed in the operation; nor do I envy the general descention and osed up condition of the flaxors and extension of my arms that would ense at the close business do have any my the general descents of my arms that would ense at the close business do have a rod suitable weight the largest bass of a b

quate means.

I have a Leonard split lamboo fly-rod, weighing eight ounces, which I find "fills the bill" exactly in all ordi-

nary black bass fly-fishing; but while in Florida I used a

nary black bass fly-fishing; but while in Florida I used a twelve feet, twelve onnce ash and lancewood fly-rod, made by Abbey & Imbrie, or at least by their predecessors, Andrew Clerk & Co., ten years ago, which I found none too heavy for the large bass of the waters of that State, and, in fact, there were times when I wished for an additional ounce or two in weight.

A trout fly-rod, then, weighing eight or nine ounces, and about eleven feet long, is just about right for ordinary black bass fly-fishing; but where the bass run large, averaging nearly or quite three pounds, a somewhat heavier rod, say ten ounces, and six inches added to the length, will be found a more suitable and pleasanter rod to handle, though the eight ounce rod will do even here for one who is an expert fly-fisher, and who does not mind a little extra straining of the brachial muscles.

But while an onnce nore or less hardly seems an appreciable quantity in the abstract, yet when added to or taken from a fly-rod, like the fraction of an inch as applied to a man's nose, it makes a very great difference in practice and reality; and in the former case it is better to have an ounce too much than a half ounce too little; for, like the Winchester repeating rifle when tackling a grizzly, it gives one a confidence in his resources which adds materially to the zest of his sport.

Cynthiana, Ky, May 10th.

J. A. HENSHALL.

NOTES FROM VIRGINIA.

THE spring of 1880 will be long remembered by sportsmen in this district for the unusual and almost supprecedented influx of duck and snipe. Great quantities of both have been killed on grounds where hitherto they have been but rare visitors, and certainly never counted as forming part of the game list of the locality.

most unprecedented influx of duck and snipe. Great quantities of both have been killed on grounds where nitherto they have been but rare visitors, and certainly never counted as forming part of the game list of the locality. One gentleman of my acquaintance must have killed at least fifty comple of snipe and over forty ducks on his own and the adjoining plantation alone, which beneath the shadow of the "beaks of Otter," is entirely a new feature added to our sporting year. The unusual mildness of the winter was of course the prime cause of this change of flight, and our afraid, unless there is some other agency at work, few of us will live to see such amouther shower of feathered emigrants.

The gun, however, has been long consigned to its case, and the disciples of Izaak have commenced operations, and as time or opportunity permits, every trutt theorman, either with bait-box or fly-book, betakes himself to the hollow gorges and mountain valleys, where the crystal streams foam and tumble from their aeriad springs. The forests on the mountains have now burst into full leaf. The calmea, the rhododendron and the dogwood relieve the deep green of the ivy thickets and the sombre cypress. The warm sun has pierced the deepest and blackest pools, and the winging worm of the bair fisher must now give way to the feathery charm.

I have lately ridden for seventy miles along the eastern base of the Blue Ridge, fishing some streams and stopping to gossip on trouting matters as I crossed others, and the universal accounts of the one correspond exactly with my personal investigation of the other. There is an immense supply of this year's fish everywhere. Large bags and small fish have been the order of the day in every stream. I fished a day and a half on what is perhaps our best river, with one hundred and twenty-live ish as the result, but so small in size that I shall certainly leave it alone till next year, and go further affeit to satisfy my piscatorial appetite.

Last year, on the same stream, it took a favorable day an

now pretty well limited to two or three of the Piedmont counties Great enthu issm, however, prevails along the course of one or two of our most beautiful streams, and the talk around the blacksmith's shop and the village stores is all of March browns and red hackles, of "thumpers" and "whalers." The fish laws are carried out to the letter, and the mountaineers daren't slip a bag or a net into the creek now to save their lives. Two of them tried it on in a sequestered glen the other day, but were reported on and promptly marched down to jail amid the icers of their companions.

tried it on in a sequestereat great the velocity reported on and promptly marched down to jail amid the jeers of their companions.

"You drop a net into that ar stream, you darned rascal, you," says the mountain magistrate (himself a keen fly-fisherman, and elected with a view to that), "and dawg my skin if I don't hev you grinnin' thro' then iron

fly-fisherman, and elected with a law a law and adding my skin if I don't hev you grinnin' thro' them iron bars in a hurry."

Few people are aware that there is a waterfall in Nelson County, Va., nine hundred feet high—one leap of two hundred feet is a clear fall without a break; the retwo humbred feet is a clear fall without a break; the remaining seven hundred are a succession of leaps, varying from forty to two hundred feet, but pausing on narrow ledges that, from the read which winds along the side of the opposite mountain, are scarcely noticeable. The grandeur of this fall, made as it is by a stream of considerable size, may be imagined; and the strangest part of the whole thing is, that I question whether its existence even is known of in Virgmia cities, except by those who may be connected with the neighborhood. Very few bass were caught, to my knowledge, before the lat of May, on which day the close time commenced. The late scason, opening on July 1st, is, of course, principally relied on for sport. There is every reason to expect better bass fishing than ever, in the higher reaches of the James this fall. The fly proved a great success there

in September last, Gen, Wade Hampton killing some-thing like six hundred to his own rod in three weeks, near Dagger Springs, Ringwood, thing like six hunur near Dagger Springs.

MICHIGAN GRAYLING .- The grayling season in Michigan opens June 1st,

VERMONT—Ferrisburg, May 8th.—Bass are beginning to bite, and have greatly increased in numbers since the passage of the protective law of 1874, wherever it has been enforced.

AWAHOOSE.

THE RANGELEYS.—The Eastern Railroad has made the following schedule of rates for excursion tickets from Boston to the Rangeleys and Moosehead and return:—Rangeley, \$12.50; Rangeley Outlet, \$13.75; Indian Rock, \$15.25; Upper Dam, \$11; Middle Dam, \$13; Mt. Xinco (Moosehead Lake), \$15; Dead River, \$13; Forks of the Kongeley, \$13 Kennebec, \$13

MOOSEHEAD LAKE,—Patrons of Moosehead Lake and vicinity will be pleased to know that the ice left the lake on the 10th inst, and before many days clapse the trout on the 10th 1885, and before many bays cappe the trothing carnival of that reg, on will begin. Extensive hatching houses were erected on the lake in September last and have proved a great success. Fifty thousand trother ceently hatched, will be ready to turn into the waters of the lake in June, which will increase the fishing facilities of the place, and add new attractions for its many

visitors.

Under the bold face of Mount Kineo stands the Kineo House, a convenient center of attraction to the sportsman, and where he can fill his camp bags with provisious before starting on the many tours through the cicturesque rivers of Maine. Thus early has Maine begun to restock her waters with salmon and trout, learning by the lack of early effort in sister States the necessity of the hour.

The Republic of the Main House Hous

to resource ner waters with samon and trout, learning by the lack of early effort in sister States the necessity of the hour.

T.S. S.

TIM POND—New York City, May 14th.—Etitlor Forest and Stream:—I have just received the following, which seems to have items of interest and information to the multitude of readers of your increasingly valuable paper, which for years has shad no superior as a gazetteer of dats, science, literature, and healthful annisement. The letter is dated at Eustis, Me., and reads as follows. T.

"Friend T.: Have not been to Tim Point for several days. When I was there last the ice was breaking up, and I expect thate before this it is all gone, and probably the trout bite sharp. I have never seen partridges as plenty in the spring as this year. Everywhere I go I see them, and people generally speak of how numerous they are. If they are lucky in their resting the chickens will enliven the forest this fall. Deer and caribou are very plenty; having had an open winter, with little snow, they have escaped the usual massacre by the natives. My bear traps are not set now, though bruin is busy killing, sheep near our houses. When I was at the pond last I found where a hunter had killed and dressed a deer in the door-yard of my camps, and put the head on the corne of one of my camps. Government has given us two kinglished. He has good teams. Dr. Hill, of Biddeford, wrise he will be here in a few days with a party of friends. He comes early to escape the flies and get altend of the rush The party with him last autumn came later. Have no heard from Col. Hayden lately. He spent the winter in Kansas City, and is better in health, as his army friend. Massachuserts—New Bedford, May 14th.—But few catches of trout have been made in this vicinity. and withe few catches of trout have been made in this vicinity. and with the given here in the content of the party with the party of triends. He was the party of triends. He will be given be the mide in this vicinity. and will be given be well as the down the conte

MASSACHUSETTS—New Bedford, May 14th.—But fee catches of trout have been made in this vicinity, and those mostly just coming out of salt water, near the mouth of the brooks. Of sea lishing there is an abundan variety—striped bass, tantog, scup, bluedish, etc. Severa tautog were caught in this vicinity last week weighing over nine pounds—one fourteen and one quarter pounds Striped bass fishing at the Vineyard and Noman's Law will soon be in order.

Bolton, May 14th.-Mr. R. Barrett has a large cistern of Bollon, May 14th.—Mr. R. Barrett has a large extern or running spring water in his kitchen, in which he ha kept two tame, pet pickerel, and has had much amas ment in seeing them catch flies and other food whe placed on the surface of the water. A few days since h tound both of them dead. Pickerel No. 1, being a trif-the larger, had caught the other by the head, and so ceeded in swallowing him about half his length, but coulget him no further, and, owing to the curved form of heeth, he could not disgorge him. In this condition things, pickerel No. 2 was suffocated, and pickerel No. died from exhaustion.

died from exhaustion.

ADIRONDACKS—Boonville, May 10th,—I have just re turned from Forge House, Fulton Chain, Brown's Trac where I had three days' very good lishing. On May 51 Lenght a speekled trout in Nick's Lake; dimensions follows: weight, three pounds; length, twenty inches girth, eleven and a half inches. This trout was in lie condition. Along with this I got several fine trout from to one and three quarter pounds; all those with ba and light rod. Also caught six good trout on the rapid Moose River, with Ily. I think by the 26th inst. Ily-ils ing will be good, as the trout are getting on to the sw water; that is, if we don't have very heavy rains. Four the lakes and streams very high, but falling rapid! Very hot; regular July weather, but no flies. R. F.

TROUT IN THE ADRONDACKS.—Letter received fro E. E. Brown, Saranac Lake, states that the trout fishin in the North Woods is good, and, in fact, never better this address is Saranac Lake, and he is a good and reliab man, and thoroughly posted in the North Woods.

EZELWRIEL.

New Jersey—Red Bank, May 17th.—The fishir, season has commenced in the North Shrewsbury Rive I took the first striped bass this A.M.; weight, two and half nounds. Will. half pounds.

MAIN POUNDS.

WHENTUCKY NOTES.—Mill Spring, May 14th. — Anglil has been exceptionally good in big South Foor Cumberland this season. Winter mild, and spewas good as early as January. Strings have been for and the average weight much beyond that of last a year before. We had begun to think that our favor afforded no black bass larger than three pounders, but such have been comparatively fingerlings on some

this year's strings. A couple of slatherers in a few min-

this year's strings. A couple of slatherers in a few minutes took six fron one pool, with hait, ranging from three to fire pounds honest weight, and after losing a very large pike secured a thirty-six incher by dispatching him with a pistol-ball after he threw up the sponge.

J. W. McHister, of Stanford, Ky., the youngest National Bank president in the United States and a recent convert to the refining persuasion of angling, has made a score in points of numbers and weights which thrusts the professors hopelessly rearward for the scason. Our Legislature acted liberally with the Fish Commission, and a revived fish law inspires a hope that hot times are in wait for malefactors. A close season for some of the central streams has a roused a recklessly repellions are in wait for malefactors. A close season for some of the central streams has aroused a recklessly rebellious spirit in many whose indulgence in scining and other violations promises fun and profit to Messrs, Grab, Snatch & Keepem, of the legal profession.

A "hauling over the coals" of one or two parties will satisfactorily demonstrate the beauties of the

stature, and quickly awaken a reverence of the stature, we warm the law. The sooner the better, say we, and we warm to lisey and others that our tender-hearted Soverno has seen thus early exhausted his enormous stock of pardons.

EENTUCKIAN.

Mt. Sterling, Ky., May 13th.—Fishing has been better than for many years, owing, I think, to much high water that prevailed all winter. Bass fishing affords fine sport, "New lights " abundant, with an occasional California salmon, the result of the plant of 1878. Bass are now on their beds hatching. Prospects good for fine partridge shooting (O. virginianus) next fall, as there are more brooders about the country than I have known for ten years, but our leatherheaded Legislators have pa-sed a bill making closs escand until December, 1881, in Scott, Clark, Flenaing and Montgomery counties. I don't know why this (Montgomery County) should be included, without it is to give the netters and pot hunters full sway, to the exclusion of a few law abiding sportsmen. VAN.

the exclusion of a few law abiding sportsmen. Van.

** TROUT IN TENDESEE—Nashville, May 12th.—Genuine brook trout have been taken in the headwaters of Harpeth River, a tributary of the Cumberland. Col. John B. McEwen, of Williamson County, is the authority. Ho took one there last week weighing three-quarters of a pound, and says that he has heard of others being taken, and that he believes they are quite abundant higher up the stream, but owing to the dense undergrowth, snakes and the wild state of the country, no one has ventured there to fish for them. They are not indigenous to our waters, but are the result of a lot of fry procured from Seth Green in the month of February, 1859, and placed in the streams.—Lick Creek, Turnbull and South Harpeth—take their source from a subterranean lake in Williamson County, the waters of which are exceedingly oold, and where these timid, delicious fish have taken refuge and propagated. propagated.

propagated.
Another interesting statement from the same authority is that this summer there has appeared in countless numbers a fish hitherto unknown to him. He has called them forked mouth suckers, in contradistinction to the common white sucker, and on account of the peculiarly shaped mouth, which is like a cross. In color they are similar to our bass, and average in weight from two and a halt to four pounds. They are a very quick-actioned fish, and took the hook voraciously, one man whom he knew taking between forty and fifty pounds in about one hour. This last statement, and the one concerning the subterranean lake, deserve scientific investigation. As authority, Col. John B. McEwin stands preciument in As authority, Col. John B. McEwin stands preëming this country.

Iowa—Keokuk, May 10th.—It may interest some of your readers to know that shad have been seined here, at the mouth of Des Moines, this spring, weighing from one to one and three-fourth pounds.

F. W.

He is Right.—Brockville. Ont., Canada, May 4th.—Mr. Van Sielen's observations, in No. 13, of trout striking at flies, out of water, with their tails, remind me of my own conclusions on the same subject. The first time I have seen trout jump or strike at my flies was in June, 1872, at or below the great falls of the Grand Metis River, P. Q. I had occasion to hook one particular old fellow, who had been striking two or three times at my fly, not only when it struck the surface of the rather foaming water, but also when the description. only when it struck the surface of the rather forming water, but also when the fly was quietly moving. I al last hooked and landed him in this way: he struck again with his tail at the fly, which effort drove him a foot or two behind his prey, and then turned, like a flash, and hooked. He weighed over two pounds, and I believe he exerted his maneuvers for the purpose of drowning or drenching the fly, so as to make sure of his succeeding bite. I have seen the same action of trout on Lake Sure bite. I have seen the same action of trout on Lake Superior waters, and that always when the fly was thrown below little rapids on calm surface, but never when I how with the current down. In that case the fish hooked directly. I had concluded that the fish attempted first to drown the winged victim, because they returned at once to bite, after making a violent splurge at the fly on the surface. Leaving the fly quietly where it then was, the trout invariably returned and took it.

Are my conclusions correct?

V Cape Cod as a Resort for Sportsmen.—Probably no section of country on the whole Atlantic Coast can furnish so many varieties of game and so many enjoyments to the sportsman as good old Cape Cod. Speaking of Cape Cod—I mean the uncivilized part of it, if I may be allowed to use that them, meaning the pharacter of the

Cape Cod.—I mean the uncivilized part of it, if I may be allowed to use that term, meaning the obstracter of the country and not the condition of the people.

Take it from Middleboro down the Cape, and any person, no natter where he has traveled, will find many things that will interest him. In the first place, he is heartily welcomed by the good old honest Capers, some of whom have not seen a city for twenty years, and are never so pleased as when listening to the traveler retailing out his budget of city news.

To the traveler visit ing the Cape for the first time the people may seem to be too avaricious, but after he has made one or two visits, and sees on what the people depend for their daily b read, he feels happy that he is able to help increase the little pile that is put away for the dark days that some times come during the winter. In fact, he is happy to be immong a people so homest and simple, and he wond ers if they would remain the same were the association is changed.

But these associations

are just what make the people so peculiar. The mon the greater part of them, living, as they do, the hardy lives of fishermen, regard life in a far different manner from what most of us do. They are always ready to help one another.

The towns on the Cape resemble each other very The towns on the Cape resemble each other very much. A hotel, which is guerally pretty confortable, but not as good as a private boarding house; a livery stable, which is the most profitable investment in the town; a public library, a town hall, and anywhere from four to six churches, form the public buildings of a town on the six churches, form the public buildings of a town on the Cape; and then there is the post office, but it is hardly a public building on account of its size. The majority of the buildings are of the most ancient type. But taking things as they are, I feel confident that no one who visits the Cape for pleasure would have anything changed. As repards prosperity, the Cape is fulling behind a little each year. The fisheries have of late years been but a poor investment, both to the fishermen and the owners; and the course resouls because ratified that fortunes

poor investment, both to the fishermen and the owners; and the young people, becoming satisfied that fortunes are not to be made at home, strike out for the large eitles, and with the exception of an occasional visit, soon forget their native land. The farming on the Cape, with some exceptions, is, of course, a failure, so that, taking into account all these drawbacks, it is no wonder the country is making little progress. But what the Cape lacks in prosperity is made up in the natural advantages offered to sportsmen. I have had the pleasure of visiting the Cape year after year for the past eight years, and I have not had a dull season's sport during all that time. The scenery on the coast is wild and picturesque; the fishing is good, and considering all in all, the Cape, as a sporting ground, is first class, as good, if not better than Prince Edward Island.

Hish Culture.

THE NEW AUGUSTA FISHWAY.—The now fishway in the Kennebec River, at Augusta, Me., has just been completed, and the river, it is hoped, will again be restocked with the Salmon once so pienty there.

The fishway has been built under the personal supervision of Everett Smith, Civil Engineer, of Portland, Me., and several important changes and improvements made in the original plan, whereby a great saving in cost has been effected, as well as rendering the fishway more efficient. Mr. Smith regards one improvement especially as an innovation in regards to fishways that is of great value, and one applicable to any form of fishway or any dam. The fall at the Augusta dam is about 18 feet, and as this is the first or lower dam it forms the key to the Kennebec river, as regards the ascent of fish. From the West end of the dam a massive crib pier extends down stream, and the space between this pier and the canal wall is filled by the fishway, which is about the shape of a diamond in its general exterior form. The head of this protecting pier has an elevation of 12 feet between them to insure safety to the fishway, from the shape of a diamond in its general exterior form. The head of this protecting pier has an elevation of 12 feet above the dam, to insure safety to the fishway, from logs of ice during the great freshets to which the Kennebec river is subject. The water for the fishway flows from the river above the dam by a passage through the head of this pier. This passage may be closed by a drop-gate; there is a waist-way across the pier, and still tarther along is the flume from which the water is delivered directly to the upper portion of the fishway by means of gateways occupied by iron swing-gates.

These gates are so arranged, that when one is submerged it may be closed and the next higher one opened, Thus the water may always be delivered gently without any "head." The fishway is three stories lapid, and the interior divided into a series of chambers through which the water flows in a uniform descent, where making the

any "head." The hishway is three stories high, and the interior divided into a series of chambers through which the water flows in a uniform descent, twice making the entire circuit of the structure, which it finally leaves at the outlet. In making a descent of eighteen feet the water flows an extreme distance of 594 feet, although, as measured by the center of the current, the distance is considerably less. The floors are paved with stone, which serves to load the structure, to retard the current of the water flowing over it, and to present to the fish a bottom resembling the natural bed of a striam.

At the lower end of the flume there is a wasteway, and and the water flowing from it unites with that flowing through the fishway at its outlet. The volume of water is thus increased at the outlet in order to attract fish to enter the fishway. The fish, after entering the fishway at its outlet, will ascend the current that flows therein, until the flume is reached, whence they pass to the river above.

The Rennel.

THE NEW YORK DOG SHOW

INCE the institution of dog shows at Newcastle, S INCE the institution of dog another.

England, in 1858, up to the present time, there has never passed in review such a splendid lot of sporting dogs as that exhibited during the three days of the bench show of last week. This fact was universally acknowledged by all the American critics present, and heartily indorsed by both of the visiting English judges, who said that even in their own country no such sight had ever been witnessed. The non-sporting classes were also above the usual average of similar exhibits, and with two or three exceptions showed plainly the advance made since the initial shows in 1877. Almost all the old leading breeding kennels, that are scattered over the length and breath of the land, had entered their typical representa tives, and in many cases their owners accompanied their favorites to insure their being shown to the best advantage before the eyes of the judges. Many of the crack dogs however, were not in bench show condition, the

lateness of the season, and the unfortunate postponement, having something to do with their not appearing in first-class trim. Conspicuous among the absentees were the dogs of the St. Louis Kennel Club, whose collection of pointers is acknowledged to be the finest in Amer ica. It was found, early in April, that this kennel would be unable to put in an appearance, and as several of the dogs in the first place had been entered conditionally their withdrawal was in no way connected with the change of dates. Faust had engagements that prevented his coming, Jaunty was due to whelp on May 5th, June ten days later, and Clytic the latter part of this month. Jessamine gave signs of coming in season, and she was to be bred to Bow. This only left Lassie and Zeal, which it was deemed not worth while to send. J. H. Whitman, of Chicago, was also not represented, and several other noted kennels were not in condition to show

The building is well adapted on many accounts, as the high roof gives plenty of ventilation, so necessary for the comfort of visitors and the welfare of the animals; and as clear weather provailed, the skylights remained open, somewhat abating the stifling heat of the first day. As we have already said, the arrangements for benching were good, nor did the judges suffer from the usual delay caused by an insufficiency of keepers to lead out the dogs during the judging. But before going further, we may remark that in our opinion it should be an imperative rule that all dogs should be led into the ring by keepers. and by keepers only. A dog will show to much better advantage in the hands of his master, and a well known owner commands more attention than a uniformed attendant. Therefore the dog that is led by an uninterested stranger is at a great disadvantage, and the frequent passing by of splendid animals can generally be traced to this cause. It is the more necessary, too, that this reform should be adopted, that the exhibitors can hold the proper authorities to an account, and oblige them to rectify such mistakes as occurred in the judging of class 29, native English setter bitches, when Mr. Well's Dido was taken from the ring without even a simple mention, and the rejudging of the whole class had to be gone over again. As it was, the fault was placed on one of the employes of the Committee, and the error at once properly re-tified, the bitch then receiving the third prize. But if the owner had been exhibiting the dog in question, and he also had mistaken the directions of the judges, he would have had no redress, for it appears that the keeper,

would have had no redress, for it appears that the keeper, in the din of the barking and howling, did not hear that he was to move the dog to the further side of the inclosure, but carelessly withdrew her from the ring.

This was not the only class that had to be rejudged, as a protest was entered by several of the largest exhibitors to the awards given in Classes 19, 20, 28, 32, 33, 31 and 40. After talking the matter over, the Board of Appeals entertained only the protest applying to Class 40, in which Mr. John Davidson's Byron, a red and white dogs were ordered back into the ring. Admitting the erroneous award in this case, we consider the precedent of rejudging a very bad one, and ishould be discouraged by those who do not desire to see our shows turned into bear gardens, just because Mr. Jones or Mr. Robinson thinks that he is aggrieved. Believing this to be a very important matter of consideration for managers of future shows, and wishing to place before our readers in as simple a manner as possible the rulings on which the two above named classes were rejudged, we cannot point out the

shows, and wishing to place before our readers in as simple a manner as possible the rulings on which the two above named classes were rejudged, we cannot point out the difference in a clearer way than by first introducing Rule 10 of the show, which is supposed to govern both cases: "The decision of the judges will be final in all cases, except where mistake, fraud, misrepresentation or collusion can be shown; in any such case the committee of appeal must decide all questions, except those of merit, and the dog may be rejudged." It will thus be seen that there was just ground for rejudging Class 29, because one of the dogs had been taken from the ring by a mistake of an attendant; but we utterly fail to see upon what sufficient grounds Class 40 was rejudged, as Rule 10 plainly states that the decision of the judges shall be final, and they alone to decied upon the merits of each entry. That they did decide and award Mr. Davidson's dog the first prize is on record, and they should have adhered to it. Therefore, the rejudging of this class was a very weak performance, and the creating of an extra first prize for Mr. Davidson's entry inconsistent.

consistent.

As we have already stated, the general arrangements As we have already stated, the general arrangements were excellent, but the blot on the show was the admission of many mangy animals, and the neglect to have a proper veterinary inspection of each animal as it was presented for admission. We believe with Stomelenge that as large sums of money are annually spent in rearing and feeding dogs with the express purpose of exhibiting them, it may be admitted with argument that it is desirable to conduct these shows in a way most likely ogive satisfaction to their supporters. This is not done if careful and competent owners are to have their stock exposed to a disease that is contagious. We know of several of the most noted breeders in the country who refuse to make their entries solely on this account.

several of the most hotel offectors in the country with fe-fuse to make their entries solely on this account. That much dissatisfaction was expressed at the judging has now been heralded through the land. But we can only reiterate what we have already written on the sub-

ject. It is to be presumed that every one that places his animal in a bench show, or runs him in a field trial, is aware that the dog is intended for competition, and that there are to be judges to pass on his merits and failings. That the exhibitor should know the names of the judges is of paramount importance. Once knowing their names, he can determine for himself whether they are fitted for the position or not, and whether they will be perfectly unbiassed in their decisions. If he resolves that they are

not, he should not enter his dogs, there being no obliga-tion for his doing so. But if he does enter his animals he thus accepts these individuals as fit persons to judge his entries, and thus binds himself to abide by their judg-ments. If, then, he adopts the latter course, and finds too late that he has been wronged in a willful manments. If, then, he adopts the latter course, and finds too late that he has been wronged in a willful manner, he would show more spirit, good sense and manliners by quiedly submitting to the injustice which he has no power to remedy, and ever afterward refusing to enter his stock in any show or trial conducted by the same management. Therefore, let gentlemen of universal experience fill the list of judges their names should be amounced when the entry roll is open. Then will the exhibitors commit themselves morally, and either courtesy or a sense of shame will oblige them to quietly abide by the decisions of the judges whom they have practically accepted.

We are pleased to state that these opinions have received the hearty indorsement of many prominent exhibitors, the Live Stock Journal, of London, and that of the eminent authority, Mr. Yero Shaw, who states that as they exactly represent his views he reproduces them for the benefit of his readers.

The judging of the entries was spun out through the three days of the exhibition, and on the last day the special prizes were awarded that are noticed further on. MASTIFES.—The first three classes were devoted to what is known as the national dog of England. They were not a representative lot. Our preference in the dog class was in favor of Dr. Albert H. Buck's Garm, V. H. C., who was more massive in shoulders, with good body and younger than his two mates who received the first and second prizes. We also liked Lehmann's Caesar much better than the winners, although he was poor in color and received no notice. In the bitches, Lehmann's Juno.

younger than his two mates who received the first and second prizes. We also liked Lehmann's Clearn much better than the winners, although he was poor in color and received no notice. In the bitches, Lehmann's Juno, an animal of splendid size, rose superior to the first and second choice. Mastiff puppies contained several promising youngsters, but puppies are always dangerous and unsatisfactory things to judge and criticise, as they alter so much.

so much.

St. Bernards.—Godeffroy's rough coated Marco, by Macdona's Pasha, out of Prince Solms' Minca, deservedly received the blue ribbon. He was an animal of majestic form, of lion color, with yellow and black markings, and a typical dog of his class. The second and third are also excellent specimens. It was a class to be proud to win in. Only two entries marked the rough coated bitch class, Thorne's Sheila coming first. The smooth strain were a fair lot, especially those of Haine's kennel. Judy, belonging to this owner, orange tawny and white in color, of good size and substance, with excellent legs and feet, received first, with Weighell's Maria a good second.

Neweunnumber This way, grand class, opportunities.

in color, of good size and substance, with excellent legs and feet, received first, with Weighell's Maria a good second.

Newfoundland, —This was a grand class, one of the best in the show, and in looking at McCormick's Charlie a lover of this breed had a thoroughly typical dog to study from. This winner of first was of the black type, so fashionable now in England; a splendid animal, with absence of the faulty curl on the lend. Pryor's Charley, second prize, we did not like as well as Alexander's Plato, atthough he had the pure "Cato" coat. The latter, who was very highly mentioned, was a grand animal, but delicient in coat, as it was too curly. Meier's Turk, V. H. C., was a very representative type of the Landscer Newfoundland. He was the only one in his class, and he received in his recumbent position the ovation which the great actiet's picture has won for him the world over. Being cow-hocked was his principal fault. Our remarks above on puppies may also apply to this class, but we consider them at best but a poor lot.

SIERIASN.—Another of the grandest classes in the show. They were all very large and powerful, but some of them showed too much of the mastiff and too little of the hound. First went to a fine black and spotted dog. Van Schade's Sultan. Second prize, Keller's Lyon, also to a good dog, but not of as good form as lirst. This old stager won last year. A third prize, extra, was begged by the judge, Dr. Stables, for Mrs. Rutan's Rex, a remarkably fine animal, who promises later on to come to the front in any show. Dr. Marshall's Bosko, a mouse colored dog, received first, with Colt's Rosette, a pretty and shapely bitch, as second. We rather fancied Bartlett's Viscount, a splendid dog of good color, grand depth of chest, with nusfels in him quarters and shoulders showing power evited mention, but though an excellent animal there was deficiency in loin to place him alongside of the winners.

DECRHOUNDS. - This class of now more ornamental than DEERHOUNDE.—This class of now more ornamental than useful breed of dogs was mainly filled up with excellent specimens from the kennels of the two neighbors, Messus. Dana and Barlow. As a rule, however, the whole lot had bad feet. Danas iron gray dog. Glen, and Barlows grayish brindle, both excellent in coat, received first and second. But taking the class from a deerstakker's point of view, we were particularly well pleased with Howard's Moidart, which was deservedly very highly commended. It must always be remembered that the dog that is strong in neek and combines power of body and legs, is the only one for practical use. These characteristics marked the Howard entry. Howard entry.

ome for practical use. These characteristics marked the Howard entry.

CHAMPON POINTERS, LARGE SIZE.—Howe's well-known winner, Rex, in the absence of the St. Louis Krennel Club's Bow, received the prize in the dog class, while Whitehead's Fing gathered in the laurels for the best birch. POINTERS, LARGE SIZE.—This class, in our mind, was not up to the mark, and what merit there was in Wilkes! Tramp to make him worthy of a first we could not discover. He is handsome in coat and color, but too long and weak in the loins, with an exaggerated and disproportioned head. Second prize in this lottery fell to Athrich's Ray, a pointer of the old type. Coffin's Rake II, draw third. His size must have taken the judg's eye, for he is a large animal. Wagstaff's Lord Dufferin justly received very high notice, and Goodman's Rattler, unnoticed, was a magnificent fellow. Our choice, however, taking all in all, was Godelfroy's Croxich (champion Barry-Macdona's Jane), only highly mentioned, but infortunately he was shown in very poor condition. He is a really first-class animal when in trim, with a grand head and good ears and immense propelling powers. In

the bitch class, Moore's Stella, a liver and white animal, properly received the first. She has a fine head joined to an excellent, well-shaped body by an almost faultless neck. Hart's Flash, a fine two year old liver and white, was awarded second.

was awarded second.

CHAMPION POINTERS, SMALL SIZE.—In the dog class the redoubtable Edmund Orgill turned up with Rush and swept the board. He also was winner with this superb animal of two of the special prizes. We may bere're-mark that the Orgill kennel is always in prime order to show, as we have never yet seen the owner bench an enmark that the Orgill kennel is always in prime order to show, as we have never yet seen the owner bench an entry that was not in "bang-up" condition. In the bitch class Van Wagenen showed Dutchess in perfect condition, and defeated Moore's Rose, who was not in her usual good show form. It would be simply impossible to find two more perfect pointer bitches. Dutchess shows the benefit of the freedom that is allowed her, for she has the run of her owner's grounds, and has in consequence neare power in body, while Rose has if anything a better head. Barker's Princess, also exhibited, but not for competition, was a superb black animal from the tip of her nose to the end of her tail. She was grand in her glossy coat, with wonderful less and feet. coat, with wonderful legs and feet.

Pointers, Small Size.—There were many good dogs

POINTERS, SMALL SIZE.—There were many good dogs in this class, and many were passed unnoticed that descrived the highest mention. In the dog class Richmond's Snipe secured first, a fine lenon and white, sprightly-looking fellow. Truslow's Range followed with second, with a very much better head than Snipe's. Third was awarded to a liver and white dog of three years old, yelept Sam, exhibited by Horace Smith, which in our judgy ment was far better than either first or second. He values two are very handsome animal, with an exceedin fine head, many points of which were unusually well fined—such as the character and position of the proceeding for the defined—such as the character and position of the proceeding for forehead, line of demarkation indicating incel—such as the character and position of the eyes, breadth of forchead, line of demarkation indicating the division between the lobes of the cebrum and the drop below the forchead almost perfect. Wood's Ponto deserved mention, as he had an excellent bead, and Price's Sefton II., also unnoticed, took too much after his sire to be passed without notice. In the bitches Symiagton's Rose (Flake-Lilly) received first. Livingston's Rose, lemon and white, whom we liked, second; and Cornell's Queen May third, and Roach's Queen II. a V. H. C. Price's Lady Sefton, unnoticed, was very worthy of high commendation, and the other entries that were ribboned deserved all they got. We cannot quite follow the judges in their awards here, recognized authority that they are. How they passed unnoticed Moore's Countess Bang, when she was the best in the class, shows that it is full time that some new sytem to prevent such mistakes was adopted. Can it be that there are too many cooks? and would it be well to try a one man's ruling for a change? Countess Bang is one of Moore's recent importations; she is by Bang, out of Bella; a remarkably into little bitch, with great depth of chest, good body and a clean, neat, well-proportioned head, with unusual muscular development in hind quarters. Bred to go—as she does—like a flash, and said to have an excellent nose. The dog puppies numbered twenty-six entries, and for the number were, however, several excellent youngsters. Lamb's Flash (Shapshot-Elf) headed the list with first, a very promising puppy. Stout's Fleet (Rake II.—Juno), a white and liver dog of eight months, second. The others of the class that received mention got only thier due, Orgill's promising juppy. Stout's Fleec (Rake II. Juno), a wi and liver dog of eight months, second. The others of class that received mention got only their due. Org Snapshot-Ruby puppy was a very handsome little few with a good head, and promises in time to be one of with a good head, and promises in time to be one of Or-gill's best. He deserved higher mention that he got. Thirty-one entries covered the puppics bitch class, and there was a for of weeds among the lot. First was given to Lamb's Flirt, litter sister to winner in the dog puppics log class. Second was awarded to Howe's Newa (Pete-Princess), a black and white ticked bitch, with no strong tables are a Pocally Englance (Park Intellection). Princess), a black and white ticked bitch, with no strong developments. Roach's Prudence (Rush-Dutchess), a much better animal than second, received a V.H.C.; and ber litter sister, a very taking-looking bitch, only an IL.C.; she was more deserving than her relation. The judgment was exceedingly faulty in this class, as Orgill's coming bitch Rue (Snapshot-Ruby) certainly should have had second place. She is a charming little beauty, and her first appearance deserved better treatment.

CHAMUGO, EXCLUSI SUTTERS—This class of does.

CHAMPION ENGLISH SETTERS.—This class of dogs which may be aptly termed the seven champions o which may be aptly termed the seven champions of Christendom, was a sight well worth seeing, Speir's famous St. Elmo adding another ribbon to his large collection of trophies, and also winning the special prize as the best English setter at the show. Moore's Leicestor was absent, but Burges' Druid and Livingston's Ray both crowded the winner, Mrs. Moore's Lark being out of the race. Magraw's Royal Duke and Lincoln & Hellyar's Frank H., the two other entries, made up the complement above named. In the bitches, Arnold Burges won in a canter with Queen Mab. Stearns' Pearl, a finely developed and well proportioned bitch, with superb loins, also attracted our attention. Charles' Rose, Nina, Florence and Daisy were benched together in one stall; they are a handsomely marked lot of blue Beltons, and show to best advantage when grouped together. to best advantage when grouped together.

the a ministrative for the bettons, and show to best advantage when grouped together.

IMPORTED ENGLISH SETTERS.—By far the best class of the show, combining a splendid lot of degs, such as are seldom ever seen at any exhibition. Fay's Coin (Leicester-Rose) received first, and Drane's Lofty second. It was nip and tuck between these superb animals, and, on the whole, a fairly judged class, barring the non-mention of Higgins' Pontiac, who is a perfect beauty, and should have been classed alongside of the winners. Coin, the winner, a white, black and black and tan, was in the best of condition. He was second at Boston to Dash III. Ifirst, last year. Lofty (Prince Leda), a lemon Belton, was also in fine form, and his admirers outnumber those of any of his opponents. Moore's Duke of Beaufort was third on the list, but we considered Roderick of the same kennel better by a dozen points. Count Dan, also belongturn on the last, but we considered rooteners of the same berniel better by a dozen points. Count Dan, also belong-ing to Moore, was rightly Judged a V. H. C., as was Godefroy's beeinal Dash. Rosenfield's Royal Carle, an excellent blue Belton, received the same honors, and also lauried the special prize for the best English setter dog, competed for by the V. H. C. winners. The bitches were falso a beautiful lot. Beebe's Mina (Leicester-Darr), white

a charming animal, as is also Davidson's Alisa (Rayal-Nima). White's Queen Annie (Carlowiiz-Uneen Bess) and Godeffroy's little Silk (Basi-Daisy) deserved all they got. Arrys Exclisis Settless.—The dog class being the largest in the show, it closed with sixty-live entries. There was an immense number of weeds, as may be supposed, but when these were golden rid of there were left some splendid specimens. We were disappointed with the entries as a class, and more so with the judging. By the selection of Walter's Grouse, a fine, large American orange and white, and then turning to Lincoln & Hellyar's Afton, a small roan of cutriety different type, for second, the classifying became hopelessly mixed, as no direct line of breed or type was followed out. To our mind Afton was by far the best of the lot, and we are backed in this opinion by Mr. Dalziel, who did not judge in this class, Davidson's Cassils justly got third, and should have been second. Goodwins' Grouse Dale, of field trial note, came in for a V. H. C.; this splendid animal is certainly of better type than his sire, the first winner. Duanc's large black dog, Chance, deservedly received high mention, and later on secured the chib medal, in the special prizes, for best black dog in the show. Goodself's Lothair was unnoticed, but he is a really good-all-over dog and should have had a ribbon. In the bitches there were forty-eight entries, Davidson's Abbess (Afton-Fannie) first, a tiptop black, white and tan; Tallman's Jennie second, and Well's Dido (Druid-Star), third. As we have already alluded above to the mistake made while judging this class, it is not necessary to remark upon it further. We believe it led inadvertently to the sharting out of Dido from first place, as she was the best, to our mind, in the class, and in this opinion we are indorsed by several of the best authorities. Dido is an exceedingly well-proportioned bitch, with ead that is indeed an ince little animal. Seranton's Jesse large deserved here very high mention. And Hatheway's Bow Bells

contiled to first.

AND TAN SETTERS.—The Gordons were a fair it the winners stood out conscious by BLACK AND TAN SETTERS.—The Gordons were a fair class, but the winners stood out conspicuously from amongst the remainder. First fell to Sedgewick's Jock (imported Jock-Foote's Mab). He is a rathing good dog, with but few defects. Second went to Davis' Puke of the East. Third to Moore's Bob, who had the handsomest body in the whole class. We liked him better than the second. Chang, of the Toledo Kennel Club, deserves special mention as an exceedingly good dog. In the litch class, Moore's Mona (Jock-Juno) shone out in her class leaving the after entries for helpind. Sho is a BLACK 2 class, but bitch class, Moores Mona (Jock-Juno) shone out in her class, leaving the other entries far behind. She is a beautiful animal, almost faultless. We admired her exceedingly, Lady Rapid, third, belonging to same owner, we do not fancy. Between the winners, the To-ledo Kennel Club's Venus was sandwiched in as second,

exocedingly. Larly Rapid, third, belonging to same owner, we do not fanoy. Between the winners, the Toledo Kennel Club's Venus was sandwiched in as second, Unfortunately, we had no opportunity to examine this bitch. Tilly's Grace, a pretty, well-put-together animal, with a neat, clean cut head, certainly doserved high mention. The puppies were a rather fair lot, the larger and elder dogs coming off winners. The bitch puppies were a sprightly lot, and the first and second winners remarkably handsome.

CITAMPION RED IRISH SETTERS.—Pive entries marked in this class; namely, Jarvis' Elcho (not for competition) Baltimore Kennel Club's Derg, Moore's Berkly, Miss Callender's Rory O'More, and Lincoln & Hellyar's Rufus and Arlington. The award was given to Moore's Berkly, and we may here remark that this well-known animal was in better show condition than any other of his owner's entries. Larer on Miss Callender was awarded the special prize for the best pointer or setter owned by a lady. Only two entries showed up in the blich class, and Lincoln & Hellyar, with the old New York favoric, Red Rival, was placed before Moore's Duck, who was badly out of fix, and not as perfect an animal.

RED IRISH SETTERS.—After the weeding out of this large class of forty-seven entries, there were a few exceptionalty good dogs left. Minny of the weeds being more of the red and too little of the Irish type. We have already hoticed above that this class was judged and re-judged. On the first innings Davidson's Byron, in color a rich blood red, with a white frill on breast, scored first place. Nelson's Elcho III. second, and Ripley's Spy third, with Strother's Flint a V. H. C. When these decisions became known, one of the exhibitors, who also had a red and white dog, circulated the protest sheet nudges, in our ophinion, very unvisely consented to rejudge the class. In the second try, Davidson's Byron was thrown our and the protest sheet. and beautiful lot. Beebes sind (Leicester-Dart), white black spots came first. Moore's Lass o' Gowrie, a workith black spots came first. Moore's Lass o' Gowrie, contents. The committee considered the matter, and the two last contents are contents. The committee considered the matter, and the content of th

entry. Byron (Bob-Friend) was a very showy dog, in good condition, fine color, and well proportioned all over. He was not, however, as worthy as Elcho III. (Elcho-Ross), who was a superb animal and a thoroughly typical good condition, the color, and well proportioned all over, the was not, however, as worthy as Elcho III. (Elcho-Rose), who was a superb animal and a thoroughly typical dog of his class. We make no comment on the renaining awards, believing then to be most justly distributed. Twenty-seven entries covered the bitch class. Drayton's Norah (Berkly-Tilly), a heautiful bitch, won first. She was by far the superior entry in her class. Shreve's Syreo (Elcho-Rose) came next with second, splendid in quality, and Newbold's Viscounters third, the latter a fair specimen. Bassford's Gipsey, first in puppy class at New York in 1877, and third in bitch class last year at same place, received no mention. In the dog puppies, Hopkin's Smith Jack (Elcho-Mey first, with a suspicious look of being older than twelve montis. Wentzel's Chief Berdly-Duck) second, a very promising youngster. In the bitch puppies, twenty-six in number, there was no moution made outside the winners, save of Hyatt's Belle Elcho, who deservedly received a very high mention. We think that there should have been one or two other youngsters added to the list. To sum the awards up, it will be seen that out of the ten prizes covered under this heading, six ell to the progeny of the famous Elcho, three firsts being among the number. Further remark is unnecessary. RISH WATER SPANELS—This was a fair class, with three good entries. Holabird's English imported Barney took list. He was in fine condition, but rather faded in coat. It may be said that he is a typical dog of his class, and one of Skidmore's best breeding, though with rather awiggy top-knot. Second was awarded to the well-known winner Mike, owned by Wells, of Canada. He was not in bench show condition, and lacked the top-knot of his breed. Mike is thoroughly a working dog, and one of the best retrievers of wild fowl in America. Lawler's Judy, from Sir Maxwell Shaw Stewart's Kennels, Glasgow, was unfortunately overlooked. She was a rare good one.

a rare good one.

CLUMBERS.—Tileston's Trimbush and Fairy, the noted

a rare good one.

CLUMBERS.—Tileston's Trimbush and Fairy, the noted dogs of last year'sshow, received the first and second deservedly. The breed of clumbers is running down in England, and but few of the short headed ones are to be found. Samuel Lang has given up their breeding, for which he was so prominent fifteen years ago, which he was so prominent fifteen years ago, which he was so prominent fifteen printing several fine specimens, was not pindged to our idea, the first being awarded to Willey's King, an animal of the water spaniel type. A cocker must have no top-knot or curl between the eyes, indicating the water spaniel cross. Shaw's Ned got second, a showy liver and white little chap, of about twenty-four pounds weight. Livingston's Rob, a Norfolk liver and white, received lind. Macdougal's Bijon, a Sussex, was unnoticed, though probably the best of the lot. Renwick's Ptok deservedly received a V. H. C. He was of the Norfolk breed, in fine condition, and a splendid fellow. Wever's Toby, also unmentioned, of the Welsh strain, lad an excellent head and ears, which were, however, too curly. The bitches were placed much better. Macdougal's Cora, of the Sussex breed, was very good and deserved first. Cattanach's Queen Vic, a Norfolk, second, with good head and crus. Gillelan's Lady, third, we did not like, 38 Wygant's Hy, unnoticed, a real fine animal, was deserving of third place. In the puppies, Wygant's Music. 2 good dog, but too large, received first. The others were lain an ordinary lot.

PoxHOUNDS.—The class was a poor one, the dogs being last in shape, style and size. Stitior's Trim, a dog with a

FOXHOUNDS.—The class was a poor one, the dogs being bad in shape, style and size. Stiner's Trim, a dog with a snipp head, drew first. The second was only fair, and the third too light and leggy. No mention was made of Purogel's Tyler, who was the best in the class. A good Puvogel's Tyler, who

Puvogel's Tyler, who was the best in the class. A good solid English hound.

BEAGLES,—A really poor class, and not a typical one to be seen, as they all leaued toward the harrier breed. Toledo Kennel Clab, with Reckless, fairly came first, and the others placed in proper order. Penfold's Charley, however, should have been mentioned.

DASCHUNDE,—In this lot there were some excellently-colored dogs, particularly the black and tans. The class was well judged; Scheelje's red dog Dan, a very fine specimen, deservedly received, first, his only fault being one common to his species, that is, pigged jawed. Claussen's Moltke, a good black, second. This breed is now one of the most fashionable in England.

Fox TRERIERS.—A fair class, with some excellent coats and cars. Mortimer's Shot first, a dog with a short, thick face between good ears, excellent in body and substance. In the bitches, Rutherfurd's Active, a white and black, came first, and same owner's Chance second. Charler's Judy third, although she showed me equality than either of the other winners. Burke's Nettle, and Fay's Tort were both good specimens and deserved high mention. The pupples, dogs and bitches, counted up to wenty-nine in all. Tileston's Vampire, first and up to wenty-nine in all. Tileston's Vampire, first and up to wenty-nine in all. Tileston's Vampire, first and one of the proper of the other vinners, and received high mention. The pupples, dogs and bitches, counted up to wenty-nine in all. Tileston's Vampire, first and one of the other vinners, and received high mention. The pupples, dogs and bitches, counted up to wenty-nine in all. Tileston's Vampire, first and one of the other vinners, second and proper of the other vinners, and received high mention. The pupples, dogs and bitches, counted up to wenty-nine in all. Tileston's Vampire, first and one of the other vinners, second and proper of the other vinners, second and proper of the other vinners, second mention, the proper of the other vinners and deserved high mention. The propries of the

sie, who also won the Club Medal for best colley bitch in the show, were beyond all praise. Wood's Jook third, perhaps the handsomest animal in the class, but head insenior to first and second winners, showing a less reliable emper. Lassie, above mentioned, according to John Javidson, is the best bitch in America—she won first at Louis last year. The puppies wore a fairlot, Apgar's assie first, a splendid colley all over. Greeley's Guggle ha was thrown out on account of "Puck" ears, otherwise a very good youngster.

BUIL DOGS.—Sir William Verner's dog Donald first, and Barnard's Judy second, both of the fashionable type it their breed in England at the present day. Miller's beg, first of last year, received no mention.

of their breed in England at the present day. Miller's Ben, first of last year, received no mention.

BULL TERRERS.—Sir William Verner again won in a satter in this class with champion Tarquin and his son apperbus. The presence of these dogs, and the world-ride reputation of the former as a winner, added a great leaf to the attraction of the show. Tarquin, the tppical dog of his class, was bred by Mr. Vero Shaw, and solid y over 2100 to his prosent owner. As a collector of this he has no equal, having landed one hundred and wo prizes and fourteen special cups. He still showed one praces of his undutful son's conduct, and was eviculy in his worst possible humor. Mr. Wills Victorally in his worst possible humor. Mr. Wills Victorally in his worst possible humor. Mr. Wills Victorally in his worst possible humor. Mr. Wills Victorally in his worst possible humor. Mr. Wills Victorally in his worst possible humor. Mr. Wills Victorally in his worst possible humor. Mr. Wills Victorally in his worst possible humor.

in the class, though Mr. Dalziel expressed his opinion that the Yankee breeders were too fond of sticking to "the fighting head."

SKYE TERRIBES.—One of the best classes in the show, almost all the entries appearing in splendid coats. John Louis Harberger's Patch and Tatters won the first and second, as they most probably would do at any of the shows in England. Walton's Pepper—a good one—third, and Aspinwall's Puppy and Vogt's Jeff close upon his livels.

shows in Engiana. Warton's repper—a good one—into, and Aspinwall's Puppy and Vogé's Jeff close upon his heels.

Pugs.—The English judges pronounced this to be a fair class, and we presume that they alluded to many of the exhibitors, who carried the ugh little brutes in their arms. It never occurred to us until recently why these monkey-headed dogs had wormed themselves into so many drawing-rooms; we now believe it was for the sake of contrast—the story of Beauty and the Beast over again. If we had ever had one doubt of Mr. Dalziel's requisite as a judge, it would have been scattered to the winds on Thursday last, when we saw him refuse the most pleading loofs, and send the darling pets back to their pens without a notice. The awards to the dogs were few, but rightly given. Daggett's fawn-colored Dick first, Miss Deichon's imported Roderick second, and Mrs. Koon's Prince, a golden fawn, thit. First, see and and third were correctly placed, and Miss King's Peggy certainly deserved all shogot.

Scotter Territaries.—An exceedingly poor class, in which the money had to be withheld. Hazard's Pepper came in for second.

BLACK AND TAN TERRIERS.—Sir William Vernet's Salford, a superb rascal, had an easy win of first, with Nettle, belonging to Mr. James Watson, London, England, second, and the rest of the entries trotting at a respectable distance behind.

ford, a superb raseal, mai an easy with a superb ford, a superb fractal, mai an easy with a condon, England, second, and the rest of the entries trotting at a respectable distance behind.

Dandle Dinnonts,—This breed of dogs, made so famous by Sir Walter Scott, had but two really first class entries, first going to Pin and second to Needle, both being recent importations of Mr. Hune, of Virginia.

Yorkshire Terriers,—This was a really good class, including both large and small dogs. Kallaher's Willie first, Roger third and Collins' Royal second, in the over five pounds class, and the former owner the first two prizes in the small class.

Toy Terriers,—A class with eighteen entries, two-thirds of which received mention, Miss Clancey's Bijon, a remarkably fine specimen of the apple-headed black and tan, received first. This was the smallest dog in the show, weighing but one and three-quarter pounds.

JAPANESE SPANIELS,—Also a grand class, which we examined with great care. We differ, however, with the judging, believing Allison's Chang was more properly entitled to first than same owner's Ching.

TAILAN GREY-HOUNDS,—Another splendid class, with eight out of the ten entries mentioned. Mrs. Foster's very beautiful Princess scored first, with the other winners closs behind.

SILE-ILAIRED TERRIERS.—Three good entries with Clifford's Jess, a silver gray, as first, and Miss Wagstail's Scanp, a blue backed, second.

Miccellandors—A mixed up lot, with first to Delm's Lion, called in the olicial catalogues a Danish boar hound, but which to us looked like an Ulm badly bred. Second to Troy's Rajalh, a very good boar hound. Third to Watson's Kathleen, an Irish terrier, one of the best of the few we have seen in this country. Fourth to Genzel's Jocko and Lorilland's Caniche Schwattz. There was no notice made of Godeffrey's Caniche Rightopel. of the few we have seen in this country. For Genzel's Jocko and Lorillard's Caniche Schwartz.

Genzel's Jocko and Lorillard's Caniche Schwartz. There was no notice made of Godeffroy's Caniche Rigalboche, although he was a good one, or of Kyle's Rover, Newfoundland and St. Bernard. Kinn's pair of Caniches, Bella and Carlo, received very high mention, but were untrimmed.

Tappan's Sancho was a very good-looking dog, by One-eyed Sancho out of Flora, and it was the opinion of others than ourself that he was of finer type than several of the winners—he was passed unnoticed. Godeffroy's Satan, a very well-made black dog, was awarded a V. H. C.—well deserved. Schieffelin's Pericles (Sensation-Juno) received a high commendation, and we think a higher place should have been given him. Aldrich's (setter bitch) Smut, also winner of the club medal special prize for best black setter bitch.

During the show the Committee of the Westminster Kennel Club had a number of protests handed into them; we have, however, noticed the only one that was entertained. In making our criticisms of the different classes, we were glad to avail ourselves of the opportunity which offered to refer some of the more questionable points to our friend, Dr. A. Russell Strachan, well known as one of the pioneer judges in this country, whose opinions were sustained by many other competent critics present,

MR. GODEFFROY'S PROTESTS.—May 12th.—The West-minster Kennel Club, New York.—Gentlemen: I beg to protest against the award in class 5, where my birds Braunfels was given the second prize. The other dog has no dew claws, a point which is, according to Stonehenge and Vero Shaw, as necessary as solid white in a bull ter-rier. Yours respectfully,

May 18th.—The Westminster Kennel Club, New York.—
Gentlemen; I protest against the award in class 33, chumpion Gordon setter bitches. The dog awarded has a fundamental fault, viz., fawn colored nese and black markings on the feet. Please examine Stonehenge, and
oblige. Yours respectfully,

A. E. GODEFFROY.

May 12th .- To the Managers Westminster Kennel Club and year.—10 he satisfies we solitistic Nonlet Circle
Oog Show, New York.—Gentlemen: While knowing that,
under Rule 10 of the Fourth Annual Bench Show of the
Westminster Kennel Club, I am without redress against
any award rendered by the three judges of the present
show, novertheless I deem it due to the reputation of my show, novertheless I deem it due to the reputation of my kennels to formally protest against the decision rendered by Messrs. Wise, Hammond and Dalziel, in their judgment of class 16, for pointers over lifty-five pounds, in which my my dog Croxteth was only awarded an H. C., while other dogs, infinitely inferior to him (at least according to Stonehoge), were given higher awards.

I deeply regret being obliged to enter a protest, as at the many previous shows where I have exhibited I have never had occasion to do so before, and my object in the case is to make my protest a matter of record for the future, and enable brother sportsnee to see the dogs now and judge for theniselves, I am, gondlemen, yours respectfully,

"Nick" on the Show.—Such a number of pointers and setters has never before been seen in a show, and there was little if any "rubbish" among them. The sanse cannot, in all fairness, be said of all the classes. The mastiffs need improvement, and with wider jaws and less pointed muzzles would nake a better showing, coming hearer to the type, and also to the English examples. The St. Bernards were better, but still capable of improvement. The Newfoundlands came up to the expectations of the critical judge, and surpassed it: they being first class in form and with good costs as well. The puppy class here promises good. The greyhounds, as a class, were good, with a good leader and fair followers. Here, as in other sections of the show, better results would follow more attention to condition. Several cases happening where really good animals lost fit ribbon because they were out of condition, when they might as well have been in prime showing stage. The deerhounds were a fine class, and then came the pointer and setter class, of which something has been already said. The bitches in the former were exceptionally fine in all the numbers. The Dasshunde found good leaders for the prizes, the first prize taker being especially good. The colleys, too, are worthy of great commendation, and at coming colley trial, if the results are up to the bench level, the class will be up to Scotch standards. The Scotch tetriors were down again, and pure blood was looked for in vain. In the many arbitrary points among the Skyes some were found to meet all, and as a lot they were really admirable, and set lovers of their breed beside themselves in piling up the adjectives.

FULL LIST OF THE AWARDS.

[V. H. C., very highly commended; H. C., highly commended; and C., commended.]

and G., commended.]

Advertisements, -All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concorned.

TWENTY-EIGHT PAGES.—The pressure upon columns this week, caused by the very full report of the Dog Show, obliges us to add four extra pages to our regular number, twenty-four. By doing this we are enabled to do full justice to the show, and at the same time to give the other departments of the paper their usual amount of space.

-Under the heading "Pedestrianism" a western paper notes Col. Bodine's selection as Captain of the American Rifle Team to visit Ireland. The editor probably means to intimate that our boys will have a walk over and walk away with the prize.

-Two prize fighters, with their crowds of hangers-on, have been skulking about for more than a week trying to find a spot on the Canadian border where they may indulge in a bout. The authorities have so far proved too alert, and the probability is that the contemplated fight will, in consequence, be frustrated. All of which is to the credit of the Canadian authorities.

-The list of prizes to be given at the Seneca Falls Convention next week is large and attractive. The prospect is that the convention will be largely attended, and marked by some close competitions. We bespeak for all attending sportsmen an enjoyable visit at Seneca Falls, and for the convention harmony and the best of feeling. Next year the Forest and Stream hopes to welcome the clubs to the eastern part of the State.

-Yesterday was the one hundredth anniversary of the New England "dark day," The Connecticut Legislature was in session at the time, discussing the laws regulating the shad and alewife fisheries. One of the number, thinking that the Day of Judgment had come, moved an adjournment, but Abraham Davenport, who would be ready and at his post of duty when the Lord called, directed the candles to be brought in, and then, amid the thunders of the tempest, discussed the bill. No more picturesque incident ever occurred in the history of game and fish legislation.

-Every member of the Long Island Sportsman's Association should be present at the meeting to-morrow night. All who may desire to attend the Convention will then be furnished reduced excursion tickets,

THE NEW YORK DOG SHOW.

THE brilliant display of dogs which, during the past week, drew thousands of delighted admirers to the Madison Square Garden, adds another to the many claims which the Westminster Kennel Club have to the gratitude of the citizens of this city in particular and the country in general. In a thousand or more stalls were gathered sample animals, illustrating the perfection of canine breeding, and showing to what a fine result an intelligent selection of sires may reach. An analysis of the list of entries shows that there is enough of fine dog stock owned and bred in the city of New York to make a creditable display, for beyond the dog dealers of the country and the kennels whose interest it is that representation should be made at every important bench show, the bulk of the entries came from the metropolis, This is the more noteworthy in the classes of hunting dogs, enough pointers and setters being owned in the city to supply a small army of gunners.

When the assertion is made by critics of narrow view that the desire for field sports of a legitimate sort is waning, and that the segregation of people in cities crushes out the desire for a run over the stubble in search of game, reply may be pointed at the dog show. The true sporting idea is strong in New York, and the number of fine guns owned in this city is in good proportion to the number of fine dogs, while the rush that takes place at the opening of the trout season, and the steady stream of anglers who go out from the city to the Long Island ponds, to the Pennsylvania brooks, or even to the rivers of Canada, testify that this branch of the sportsman's guild has its many votaries. The dog show goes to demonstrate in another way what the subscription books of the Forest and Stream may furnish documentary evidence of-that the great cities of this country are full of men who are sportsmen in spirit, of skill in woodcraft, and able to hold their own in the field, able to cast a fly or send a long, killing shot after duck or woodcock, while to the superficial observer they are the busy men of the counting room or the shop. Bench shows may aid to swell this class by inculcating a love of the dog where it may not now exist, for it seems to us that no one could pass up and down the long aisles of the show last week and not be possessed with a desire to own one or another of the fine specimens there on exhibition.

The show had, besides, a missionary effect in another -in teaching dog owners and dog lovers what is really good in their specialty. There are in this city to-day thousands of dogs whose only claim to an existence is that they exist, and their only salvation from the destruction of the dog pound is the fact that they have owners who have not yet been brought up to the point of noting the good from the bad in a dog way. There should be a grand clearing out of the mongrel curs that infest our streets and bring bad repute on man's best friend by becoming man's nearest enemy. Bench shows, properly conducted, will demonstrate that there are dogs worth even the seemingly fabulous prices of the fanciers catalogue, while there are others to whom a speedy termi-nation of their existence would be a godsend indeed. Every properly constituted person is a natural dog lover false teaching or erroneous early impressions may leave, through life, antipathies to the animal, but these cases are rare and abnormal. While this fact of a general love between dog and man holds, it does not follow that the ability to distinguish the good from the bad in dogdom is equally wide, One may learn to love even a "yaller dorg," but such affection is misplaced, when there is the possibility of owning animals so intelligent and so near the speaking level as were to be seen on the Madison Square Garden benches. With them we should have none of this hydrophobia excitement, which now and then sweeps over the community when some snappish Spitz or still more ignoble our shows its bad blood by inserting its poison-laden fangs into friend and foe indifferently The condemnation is general, while the real blame and danger is very circumscribed. We want sharp, clear and well-enforced dog laws, rooting out the sheep-killing, manger-occupying, howling brutes that are a curse alike to city and country. But we want with them a clear ap preciation of the fact that a dog, per se, is not an animal to be hunted after or treated with neglect. "Love me love my dog" is a good motto where the dog is worth the loving, and where it is not it is pretty certain that the owner, too, lacks some lovable qualities. While every one may not own dogs, it is but just that every one should have a clear appreciation of the important place which the animal fills, and have an intelligent comprehension of his good and bad points, as shown in the various classes. This is the mission of the bench show. Field trials are well in their way, and as the necessary comple ment of the bench show their importance is beyond question. There is no antagonism between them, and the tests by one set of rules are to be completed by tests under the other set; but there are a hundred points of importance to be reached by a bench show which the field trial fails entirely to touch. Thousands who should become intelligent champions of the dog may be drawn to a bench show, where one may attend a dog trial in the open; hence, the importance of an earnest support of

the one class of show without making any disparagement of the other. Herein lies the mission of the Westmin-ster Kennel Club in this city.

There are points against which criticism may fairly be launched in connection with such displays, and where the element of competition is brought so prominently forward there are always certain to be heart burnings, deep and many, where there are forty eager and expectant owners, each seeing all perfection in his particular favo rite, and only one blue ribbon to be awarded. The past show has, however, been fairly above the suspicion of a grumble on this ground. No one doubts but that the judging was fearlessly, ably and impartially conducted; each dog got his due, or very nearly it, and while the blue ribbon dog may not have been, in each class, a perfect model of that particular breed, still, in that particular collection of dogs brought before the judge there is no room to doubt that it was the best. There are differences in the classes of dogs shown, and there is yet much to be done in developing a higher standard and a nearer approach to the model dog in many of the classes. Still, this remark does not apply to the most important class of the show, if it is proper to place the setters in that po-sition, and the judges who came over and so kindly gave New York and the Westminster Kennel Club the benefit of their experience and special knowledge, were indeed within bounds when they used such adjectives as "superb," "grand," and "magnificent," in speaking of the pointer and setter classes. The club has done good service at home, and it has done more; this show just closed is bound to produce good results abroad. We have secured the best that English kennels can furnish; and soon our Parole exploits on the turf will be followed by equally signal victories on the bench and in the field trial. There are many to-day who would not exchange their American breech-loader for any of the vaunted English makes of guns, and to-day any one in search of a fine sporting dog need look no further than the advertising columns of the Forest and Stream to find the proper place to buy, He will secure the very hest by staying on this side the ocean, and there never' yet, at any bench show, was collected a finer lot of animals; and the quality of the late show may best be judged when the numbers in each class is taken into account.

LESSONS FROM ANOTHER LOG .- As will be seen from our special correspondence from the Pacific, yachting on the Western shores has taken a boom. This is due in no small measure to the untiring energy and zeal displayed by the officers of the San Francisco Yacht Club. The stuff they are made of appears from the following ex tract from their gallant Commodore's annual report, and we only regret that want of space prevents our printing his remarks in full :-

"I point to our fleet of yachts with pride, for although inferior in number to some of the Eastern clubs, it will compare with them very favorably in all that pertains to seamanship, outfit, maintenance, comfort, sea-going qualities and speed; and it is with pleasure that I congrat ulate you upon the marked improvement in the style and manner in which your yachts are now kept. . Commodore certainly set you a good example last year, for out of 192 days that the *Frolic* was in commission she was cruising 104 days, and I sincerely hope to be able to do quite as well this season. .

Eastern men who keep their yachts rotting at their moorings seven days a week can well follow the example of the Frolic, and if the "fixtures" of some of our clu exhibited the spirit shown on the Pacific the senseless cry about handicapping to bring enough yachts to the line to make up a race would never have originated. What our large clubs need is to take a lesson from the smaller ones, to wake up from their somnolent sloth, and to put a little more life into club existence. We have taken several wrinkles already from the Pacific; we have learned from them to offer prizes for seamanship, and we have learned that the yawl is well adapted for our waters, and we can learn from them just a little more how to arrange a series of matches and cruises that will keep the club alive and before the public and themselves a little oftener than one solitary, broiling-hot day in June, coupled with a lazy drift and a paucity of entries, and perhaps a noisy "excursion" down a mill-pond in mid-summer-the same stale old "programme" without one iota of progress or development since the days of the last generation. Have our great clubs no leaders who can see deeper into the sport than the bottom of a wine glass? Why do they not speak out; why let a club drift to leeward like a crab when slight effort on their part can readily overcome the drag of the lubber element ever present in a country where the sport is new?

THE TEAM TO IRELAND .- The exchanges from Ireland and England come laden with notes of the preparation and hospitality which the hosts on the other s paring for our team. Major Leech is actively at work gathering together his team, in a rather miscellaneous way, to be sure, but one which in the Major's hands There is a call for seems to be as effective as any other, a rush to practice, and while not much of team system

may be expected among the Irish riflemen, our representatives may be pretty certain of meeting a squad of the best individual shots of Ireland. The visit is attracting attention in England as well, and the Volunteer Service Gazette, the best authority on matters connected with the rifle in the Kingdom, has the following very sensible suggestions about a struggle at Wimbledon after the Irish match has been won or lost. It may be well to promise, before quoting the words of our esteemed contemporary, that the American Team go from these shores to shoot a match with Ireland, and that upon the completion of that match the team will be disbanded by Col. Bodine, its Captain. All of its members will no doubt run down to London and be present at the Wimbledon meeting in July. Whether they will organize as a team of American gentlemen and shoot an unofficial contest is a matter in their own hands, and no doubt they will be more than willing to do so, and then the kindly suggestions of the Gazette may be put into practical form. The authority above mentioned says in the issue of May 1st:-

"It will be five years next July since a team of smallbore riflemen from the United States, after giving a no less amous Irish team a sound beating on the latter's own ground came to Wimbledon for the first and only time. The American gentlemen were, of course, most welcome, and made themselves eminently popular during their short stay among us. But it cannot be denied that they did not find what they might fairly have expected to find, whether they chose or not to avail themselves of themviz., facilities for pitting themselves, as a team, against a first-rate British or United Kingdom team. The fact a first-rate British or United Kingdom team. The fact was, as we remarked at the time, that everybody thought that somebody else would take the matter in hand, and that ultimately there were no arrangements made at all for making a match which would have been worthy of our visitors and of ourselves. When the Americans did cone, indeed, or were just coming, all sorts of plans were proposed in haste, for there was assuredly no want of good will. But none of these proved feasible, and in the end the visitors went away—having shown us, indeed, what admirable shots they were individually, but without our having had the opportunity of seeing them to the greatest advantage—viz., when working together as a team.

without our having had the opportunity of seeing them to the greatest advantage—viz., when working together as a team.

"A letter of Major Leech informs us that a team of the long-range riflemen of the United States is expected to land in Ireland next month, there to shoot a match with an Irish team under the Major's captainship. The latter has already taken steps to organize a body of his countrymen who will be worthy of their opponents; and we quite agree in thinking that the name of Major Leech is a sufficient guarantee that all the arrangements will be successfully carried out, and that an opportunity is given to Ireland of showing that gratit ude which she undoubtedly feels sincerely and widely. We may be quite sure that for many reasons the American team will have, as they have lad before, a most enthusiastic welcome from their Irish friends, and the fairest of fields wherein to gain a victory or sustain a defeat. The visit will undoubtedly be a very pleasant one to the hosts, and we may hope that it will be no less pleasant to the guests. But our business on this side of the Clannel is to endeavor at once to induce the American riflemen to give us, after their Irish visit, a turn at Wimbledon in July. And we cannot, wo say frankly, hope to do this unless the Council of the National Rifle Association take the matter at once in hand, and make arrangements for a match at long ranges between the Americans and the very best team we can get together here. It is of course not certain that an invitation to such a match at Wimbledon would be accepted; but it certainly ought to be given, and warmly pressed upon, Judge Gildersleeve and his team we can get together here. It is of course not certain that an invitation to such a match at Wimbledom would be accepted; but it certainly ought to be given, and warmly pressed upon, Judge Gildersleeve and his countrymen. Such a match should, if posible, not be a mere replica of the Elcho competition or of the Irish match. And it seems to us that we cannot ask the Americans to compete at the Meeting of the National Rifle Association of the United Kingdom except against a team composed of the very best men that can be got together from the parts of the Kingdom, whether they happen to be Englishmen, Irishmen, or Soutchmen. The details of the invitation or challenge may well be left for further consideration; but the general composition of our team is not, we submit, a matter of detail at all. The Council of the National Rifle Association have always asserted that they represent not England, or Ireland, or Scotland alone, but the walle Kingdom, and they cannot, either consistently or with due respect for the undoubted provess of the visitors, ask them to fight against any but the very best opponents which the whole the undoubted provess of the visitors, ask them to fight against any but the very best opponents which the whole of the United Kingdom can show. A challenge to such a contest against such opponents would, we are sure, be readily accepted if it should be at all consistent with the previous arrangements of the American team. Certainly it ought to be proffered at the earliest possible moment; and no pains should be spared to make the match one of the most important events of the Wimbledon Meeting of 1880.

of the most important events of the Wimbledon Meeting of 1880.

"We do feel, we must say, and have always felt, that the American team, no doubt, as we have pointed out above, from unavoidable causes, were not treated in 1875 quite as they ought to have been treated. They saw that there were difficulties, and showed the most genial courtesy in accepting our excuses. This year we have an excellent opportunity of making amonds for what unfortunately happened in 1875. We are quite sure that this opportunity will not be lost, and that we shall show the American team at Wimbledon next July, that though we cannot hope to vie with the splendid hospitality with which they invariably receive our ritlemen on their own shores, we can at least give them a hearty, welcome, and can muster opponents who will be not unworthy of their steel,"

-We have received from the San Francisco Bulletin Co. a copy of the handsome chromo of the famous St. Julien. The picture is an admirable specimen of horse portraiture, It does great credit to the publishers,

GAME PROTECTION.

Dr., John P. Ordway.—Boston, May 15th.—Editor Forest and Stream:—In accordance with a vote passed at a meeting of the Massachusetts Fish and Game Protective Association, which was held on the 12th inst. I beg to inclose herewith a copy of the resolutions which were adopted at said meeting on the death of ex-President Dr. John P. Ordway.

E. S. Tobey, Jr.,
Secretary.

Resolved, That in the death of Dr. John P. Ordway the society has lost a man of independent thought who always acted in accordance with his conviction and senti-

Resolved. That his manly and outspoken utterances of what he firmly believed to be for the best interests of man made him a desirable co-worker and a reliable friend.

friend. Resolved, That his opinions were valuable and influen-tial, being always based upon an intelligent considera-tion of the subject upon which they were expressed. Resolved, That this Association regards him with grate-ful memory as the founder of the principles upon which this organization is based, and in no small degree do we regard his indefatigable labor as the cause of our prosperity and success

perity and success.

Resolved, That a photograph or other likeness of Dr.

John P, Ordway be procured and placed upon the walls

of the audience room of this Association as a tribute to

the memory of the founder of this Association and its first President.

first President.

Resolved, That a copy of these resolutions be placed upon the records, and that the Secretary be instructed to forward a copy to the family of our deceased associate.

DAN'E NEEDHAM,
H. H. KIMBALL,

Committee.

VIRGINIA-Richmond, May 13th.-The annual meeting VIRGINIA—Richmond, May 18th.—The annual meeting of the Fish and Game Association was held yesterday evening. The following officers were elected: President, Charles T. Palmer; Vice-President, Dr. O. A. Crenshaw; Secretary, E. H. Fisher; Treasurer, John Ott; Executive Committee, Moses Ellyson, Philip Haxall, W. Russell Robinson, A. L. Holladay, and W. G. Miller. A resolution was adopted calling on the minor organization to contribute to a fund for the purpose of spreading a digest of the fish and game laws throughout the Commonwealth.

[From a Special Correspondent.]

OUR WESTERN LETTER.

DENVER, Col., May 4th.

DENVER, CoL., May 4th.

NOTHING could better illustrate the truth that all things are relative, than for a New Yorker to hear Chicago spoken of as the East. Should be come to Denver that is what he will hear. No New York newspaper finds its way here regularly but the Herald. Chicago papers arrive three days after publication, and, as far as newsdealing is concerned, that city is to Denver an eastern outpost. The papers published there are regarded here as the New York dailies are regarded in Western New York. Everything east of Chicago is, so to speak, in the wilds, and the New York news sounds to us here as the Rocky Mountain intelligence strikes the inhabitant of Gotham.

It seems very distant and faint. The change is rather pleasant than otherwise, and is probably wholesome. It is so complete that the novelty is rather refreshing and invigorating. It is not, in this respect, so very different from a trip to a foreign land. All the elements of distance, change in scenery, difference in town aspects and in manners of the people, are here, insomuch that one is rather startled to hear the people speaking the same English that is heard on the Atlantic coast. The traveler to the West, therefore—to the "far West"—can look for something of the change and diversion that he gets by going to Europe. Nor is the sensation which the man feels when he is about starting for these regions altogether different from that which he has on embarking for the old country. There is the same extent of preparation, the same close attention to the provision of proper wraps, and of the hundred little things which have to be thought of for a long journey. There is the same engagement of a berth in advance, and when one gets settled and his hand luggage stowed in the sleeping car section, the frame of mind is strikingly like that which comes when the steamship traveler finds himself first in his stateroom. In fact, the likeness between the sleeping car and steamship traveling is maintained throughout the journey. The porter is the steward, and it is only fair to say right here that as an attendant he far outdoes the average steward of the sea. Indeed, the African as a servant is seen to about as great an advantage and as near perfection in a Pullman sleeper as anywhere in the world. Here he combines the activity and thoughtfulness and training of the French waiter, the steadiness and intelligence of the American and the inimitably gratifying servility and deference of the best of the African domestics. I could not help wondering how so uniformly good a selection of servants could have been made, and I do not yet understand how so much discipline can be maintained among them, removed as they are from supervision continually during their service, Of course, it is due to the judgment and desire to please and attention to business of the managers, but it is surprising that there is not a mistake made once in a while. When to the sleeping car we add the hotel car accommodations for traveling, nothing more can be asked for. There is the whitest of linen, waiters of the best, in religiously clean, white jackets, attention to your wants

that is both full and rapid, and a breakfast that makes one think involuntarily, and without the slightest exaggeration, that one is eating at Delmonico's or the Brunswick, and at rather less than the prices at those places. In fact, as to price, the traveler could probably not live much, if any cheaper, if, in a fit of economy, he were to take his long lunch with him. And at all times he has his option between the neat, inviting table, with its delicate French cooking, that is spread before him as he looks over the morning paper, and the regular wayside eating house (which should shame many of their like in the East), at which a good twenty-five minutes is given thrice daily for obtaining refreshments.

I find I have unconsciously taken up a good deal of space in adverting to the incidents of getting out to the Rocky Mountains. But the remembrance of the comforts I had in traveling hither, coming, as I did, by good fortune, over a line with which there was no fault to be found, and for whose excellence of accommodations I was, in my ignorance, unprepared, my lively remembrance of those comforts, I say, has led me to talk about them in this letter at the expense of other matters. However. I will try to give attention to some other subjects in other communications, which I hope to be able to send you. Still, it is not amiss for any one who is going to come out here to try his rifle or rod, to know a good way of getting here; and to any such I would say that they probably cannot do better than by taking the route I did, which was via Pennsylvania Central and Pittsburg and Fort Wayne to Chicago, thence by Chicago and Northwestern to Omaha (or rather Council Bluffs), and thence through by the Union Pacific.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations: Game and its Senson; Fish and its Season; Boats, Guides, etc.; Name of person to address.

—Address all communications to "Forest and Stream Publishing Company, New York,"

ANOTHER CAMP BED.

ROM four years' experience of actual life in camp, through summer beat and winter cold, in fields, swamp and forest, I know there can be no real labor accomplished, or enjoyment had, without a good night's rest. I will, therefore, for the benefit of my fellow sportsmen, describe a bed that never failed me, one that nightly contributed to my physical strength and comfort, thereby strewing my pillow with pleasant dreams of peace, home and absent wife and child; a camp bed that to this day holds a place in my memory that time can never erase. First, a full-width gun blanket; second, a mattress made after the pattern of a comfort; material-bed-ticking and cotton batting; length to suit the person; width, 26 inches. The batting to be spread over one-half of the ticking to the thickness of two inches, then cover it with the other half of the ticking, sewing up sides and ends, and tacking through and through with twine in four inch squares. This mattress is bo be laid on the right hand side of the gun blanket. Third, a gun pillow, that can be expanded or emptied at pleasure. Fourth, a heavy gray blanket, army pattern. This is spread on the mattress, and the left hand half of the gun blanket. Now you may undress, if you wish, lie down, covering first with the woolen, then with the gun blanket, tucking the latter under the mattress. Let it cover your head if it rains, and, my word for it, you will lenjoy a sweet, refreshing slunber. If you have no tent or shelter, and it threatens rain or snow, take your knife and cut a small ditch two inches deep, V-shaped, round the edges of the mattress, giving it a free descent. With these precautions you have nothing to fear; you will be warm and dry, and the steep will be the sweeter, lulled to rest by the pattering rain.

dry, and the sleep will be the sweeter, lulled to rest by the pattering rain.

When you rise, spread the blankets as they were while you slept, empty your pillow, and roll close and tight from the head, and at the foot you will find the two leather straps ready to bind the bundle, which will be compact, convenient for transportation under your arm or behind your saddle, ready for use on any kind of ground at the end of a day's march or sport.

Cape Girardeau, Mo.

VERMONT—Ferrisburg, Muy 8th—There is no spring shooting worth reporting here. There should be no spring duck shooting in our waters, for it never amounts to much, and drives away wood and dusky ducks that would otherwise bred here. It is strange that we have no spring suipe. I never saw half a dozen here in one would otherwise offeed nere. It is strained that we have no spring spipe. I never saw half a dozen here in one spring; yet in favorable falls our marshes are sometimes swarming with them.

MASSACHUSETTS—Dana, May 14th.—Mr. William B. Lincoln recently caught in a trap an eagle which measured six feet and eleven inches from tip to tip of wings.

CATSKILL MOUNTAIN BEAR HUNTING—Philadelphia, May 14th.—I have read or heard that there were a large number of bears in the Catskills this season. Can you give any information on the subject as to the probability of "bar" being in sufficient numbers to be found, and where to put up, etc.

There are bears in the Catskills. We have seen them there, but we know of no spot where a man would be sure of finding them. Possibly our correspondent may secure the desired information by writing to Mr. Schutt, at the Cauterskill Falls. Address Catskill, N. Y.

SNIPE ON LONG ISLAND .- Letter just received from my SNIPE ON LONG ISLAND.—Letter just receive a roar my old friend and guide, Carman Cornelius, at Seaford, L. I., states that snipe shooting is good at South Oyster Bay, To all lovers of the sport 1 say go, and go with Carman, No better man at the business. Can be reached by S. S. R. R. of L. I. Stop at Vandewater's; they will take care of you. EZEYKILL.

New Jersey—New York, May 11th.—I have just returned from Ocean County, N. J. Wilson's snipe have been quite plenty of late; but, they being flight birds, they did not stay long. The bay birds are commencing to come, and the prospects are that there will be plenty of shooting this week and the next. The warm night we had last Saturday brought a large number. The fires we had in New Jersey did not harm the birds in the least in Ocean County, as the fires were ten to fifteen miles distant from the shooting grounds.

J. A. D.

Ocean County, as the fires were ten to fifteen miles distant from the shooting grounds.

SNIPE SHOOTING 'AT BARREDAT,—We took the New Jersey Southern on Monday the 10th inst., bound for Forked River to try our luck at the snipe. After a trip of three hours we arrived at our station, and were met by our most genial host, ex-sheriff Parker, and by the way, who has not heard of the good sheriff, who keeps really a sportsmen's retreat of the first order, leaving nothing undone to make it pleasant and comfortable for his guests? A wish is not made known but it is immediately attended to. Long life to the sheriff. May his eyes not grow Jun, nor his hair grow gray. After partaking of a hearty supper we met our old friend and prince of baymen, Capt. Firman Matthews, who was to go with us for the trip, and who had all things in readiness.

After a good night's rest we arose on Tuesday at 4 A.M., arriving at our grounds about 8.30 a.M. The weather was all that one could desire for snipe. We could now hear the yellow legs whistling all around. Soon our stools were out and blinds ready.

"Hark! I hear them," says the Captain. Down we both are. In they come: four in a blunch, surging to the stool. Up raises Ezeykill, and down fall four nice birds. Parker 10 bore and No. 10 slot.

"Down!" says Captain; "here comes a flock of dowitches." In they come, ten of them. Two shots, and we pick up seven nice birds; and so we go for about two hours, and bag twenty-two fine birds.

In the night the wind shifted to the northwest, and commenced to blow. However, off we started in the northing, and succeeded in bazging nine on this day. The wind kept on increasing, until on Thursday it blew at gale, but with all the drawbacks we killed six on this day. It was cold and rough in the night; the wind shifted to the northeast and blew hard and cold, and nor a bird to be seen or heard anywhere. So we concluded to return to headquarters—the sheriff.

day. It was could and rough in the man; the wan shifted to the northeast and blew hard and cold, and not a bird to be seen or heard anywhere. So we concluded to return to headquarters—the sheriff's.

An old sheldrake is a bird which is condenned for its rank, fishy taste. The Captain killed one with a 10 bore Parker with No. 10 shot fully 40 yards off, and we concluded to try the experiment of cooking him after a peculiar fashion. I took his skin off, and all the fat that was on the body, and proceeded to cook him, and the result was that not a particle of fishy smell was noticed while the bird was cooking, nor when eaten was there any of that strong and disagreeable taste any more than there would be in the finest red-head you over tasted.

After a hearty repast at the Parker House we retired for the night, and started for home on the 9 A.M. train, after a most enjoyable trip, and had the weather permitted it would have been a very successful one.

Two Satpe at One Shot.—Portland, May 10th.—Your exact and careful correspondent, "A. C. L.," writes in your issue of May 6th of shooting two snipe at one shot, and adds that he never heard of this being done before in the East. To bug a brace of these wily birds at a shot when one does miss such an incomprehensible number of single ones is indeed a lucky flute, and rare enough to send a thrill of explication through the wearyy frame of the far tramper over marsh and moor; still, such good luck is not altogether unheard of even in the East.

East. On October 8th, 1877, a friend and I were beating up a marshy alder run. My friend, with his knickerbockers on, was bravely plunging through the swump with the dogs while I leisurely watched outside. Soon a snipe darted up out of the alder tops some thirty-five yards away. As I drew on him another squeaked up into range fifteen yards nearer, and I dropped both at one short

away, The range fifteen yards nearor, and I dropped both at one shot.

"Mon Dien, what luck?" cried my comrade from the alders. This was a fluke pure and simple. But a few days after that, when out alone, my setter came to a most decided point in a tussocky field. Walking up to him three snipe flipped up; two flew away, quartering to the right, keeping in exact range from me in the most obliging and unsimplelike manner. As my gun swung up to my eye I saw them skimming along over the ground like a matched span of swallows. I pulled on them; their heads dropped and they fell together stone dead, still keeping in exact range. Turning I bowled over the Itird snipe, who was bravely tacking to windward and almost out of range, with my left barrel.

This was not a fluke, but deliberately shooting three snipe in two shots, right and left. The two snipe killed at one shot lay just three yards from each other.

MARSTRAND.

The editor of the Germantown (Pa.) Telegraph, says:
"A correspondent of Forrest and Strielam, writing from
Norwich, N. Y., brags of having killed two English
snipe at one shot. Of course they happened to be crossing the space covered with the sportsman. What will
such of the readers of the Telegraph, who are familiar
with the ground, say when we tell them that the writer
of these lines killed two English snipe in what is known
here in Germantown as Coulter's meadow, with right
and left barrel, at one flight. This was forty years ago.
There is still some swampy ground there, created by a
neglected spring, and not unfrequently a snipe is bagged
in it. Occasionally a rail-bird was shot, but we never
had the pleasure formerly of seeing one."

"A. C. S.," Norwich, N. Y., records an instance of
killing two snipe at one shot, and states that he never
saw this done before. In February, 1875, it was done at
Colfax, La, three times in one day—twice by myself and
once by my companion, a native Louisianian, who was'
receiving instruction in wing shooting. The birds were, The editor of the Germantown (Pa.) Telegraph, says

however, in great abundance. On the day referred to, I killed thirty-six between breakfast and noon, and thirty-sime between I P.M. and 6 P.M. I never before or since saw so many snipe, i. c., Wilson's snipe, in one place. I was not out of sight of the camp during the day. They must have been migrating, as very few were to be found the next day.

T. H. GROVES.

the next day.

TEXAS NOTES.—Palestine, Taxus, May 13th.—The Jackstone Gun Club, of Dallas, is making preparations for the State Sportsmen's Tournament, which opens at the above city on the 17th inst. A greater number of people will witness the contests than at any previous tournament, and extensive arrangements are being made for reception and entertainment of visitors. Arrangements have already been made for ample supply of wild pigeons. Nearly every club in the State have signified their intention of either sending delegates, or attending as masse. The outlook is very satisfactory to the boys. The attendance from Palestine will be scattering, but we will send some good men to the field. Six coops of wild pigeons from Michigan, intended for the use of the Houston Gun Club, and four coops for the Fort Worth Club, passed to their destination last week, from which we may infer that the boys intend to get their hand in. The Palestine Glass-Ball Club, organized last year, in deference to the prevailing "boom," proved short lived, as no attempt has been made toward reorganization this season.

Glass-Ball Club, organized last year, in deference to the prevailing "boom," proved short lived, as no attempt has been made toward reorganization this season. The quail are rather more plenty this than last year, owing to the comparatively dry fall and winter; but the early and continual spring rains have prevented their nesting. I went out the other morning with a young dog to see what he was made of, and found two bevies. They were rather inclined to be trod on, rather than get up.

up.
Fishing runs about as ever. Small black bass and perch in the creeks, larger ditto in the rivers and lakes, with numerous Buffalo fish to give you a heavy pull, and finally disgust you with their coarseness and lack of flavor. At Galveston, of course, the fluest of sea fishing is to be had at all times.

L'ECLAIRE.

Wisconsin—La Crosse, May 13th.—The Gateway City Shooting Club held their annual meeting at the office of the secretary, Mr. C. Norbeck, Tucsday evening, The election of officers for the present year resulted as follows: President, Harry E. West; Vice-President, C. F. Huntsunn; Secretary, Carl Norbeck: Treasurer, Fred. Bugley; Executive Committee, H. E. West, C. F. Huntsunan and John McMillan. A committee was appointed to secure suitable grounds for permanent use, probably on the banks of the La Crosse River.

on the banks of the La Crosse River.

PENNSYLVANA SQUIRREL SHOOTING.—New Bloomfeld, Perry Co., Pat., April 21st.—Sportsmen here confidently expect more game the coming season than was to be found last. The open, mild winter just passed enabled small game to live through it with ease; the mast being heavy last fall, food was not scarce, and the absence of deep shows and continued cold gave pheasants, turkeys, etc., opportunity to hunt feed all along. Then again, the foxes have been hunted off pretty close, so that game birds were not slaughtered as they are some seasons by that thieving nuisance. Two parties in this town, who hunt foxes in partnership, got away with twelve red Reynards this winter. The county pays a bounty of \$1 for every fox killed, and the skins are disposed of to men who travel the county buying up skins of all kinds for \$1.20 each. The county pastins of all kinds for \$1.20 each. The county treasurer of Perry last year paid out nearly \$200 for fox orders, thus showing that Reynard is not on the decrease, as are squirrels, pheasants and other game here. Farmers and woodsmen say they see not a few wild turkeys in the old and unfrequented \$1.20 each. The county treasurer of Perry last year paid our nearly \$300 for fox orders, thus showing that keynard is not on the decrease, as are squirrels, pheasants and other game here. Farmers and woodsnen say they see not a few wild turkeys in the old and unfrequented fields that last fall contained buckwheat or rye, picking up food. If there does not come a spell of cold, freezing weather to destroy the eggs they are now laying or soon will lay, there will be a pretty fair crop of turkeys for next fall's shooting. The small birds we call partridges are nearly extinct in this section, and for what reason I am unable to say, unless that crime is also to be laid at the door of the needs and gentle Reynard. "An honest fox must live, you know," Gray squirrels, once so plenty, are now only to be found in certain localities, and there only at certain times. The way they are hunted here, is to go where hickory trees are when the nuts are about large enough to please a squirrel, early in the morning, just about daybreak. If they are working on the nuts you will see the cuttings under the trees. Keep still till you hear a nut drop, then examine the tree closely where it came from, and you will often find a squirrel there. If he sees you, he makes a straight coattail for his nest in a hollow oak tree not far distant. Then is your time, if you want the squirrel, for if you let him get in the hollow tree you won't see him soon again. To hunt squirrels in this manner one should nake as little noise as possible and leave his dog at home. Dogs are only of service when late in the fall the squirrels come down on the ground to gather up the unts that are lying there, then the dog takes the scent and shows the hunter what tree they are on.

The pheasants are killed here by those who are not wing-shots in a manner that would not be approved of by the fraternity. Hunters conceal themselves undergrapevines where the birds are known to feed, and shoot them as they come on in the evening to feed, They have their regular feeding p

pheasants.

No wild pigeons have put in an appearance this spring, None were here last full. They seem to have slighted this section altogether. They used to be plenty here. There is only one good trout stream in Perry County, It is in the remote western end of the county, and hard to get at, consequently it is fished by only a few anglers. Mill-dams, saw-mills with villainous saw-dust floating in the stream, and in some places tanneries emptying tanjuice into the waters, have used up the trout in streams where once they disported innumerable.

WAYNE.

WILD PIGEONS.—The following description by a western writer supplements the recent communication on the subject in our columns :-

Something more than four weeks ago the biennial flight of pigeons to the woods of Northern Michigan, for which the hunters had long been watching, commenced. These

birds on their journeyings from the South to the far North stop every two years for two or three nestings in Michigan, usually coming in immense numbers. On the alternate years, when beed-muts are not abundant in this State, they take some other course in their northward flight. Formerly, their first nesting was in Allegan or Ottawa County. Of latch they have generally settled first in Shelby, Oceana county, and later in the season in Benzie and Emnet counties. Two years ago they skipped both Oceana and Benzie counties and nested in Emmot near Petoskey, but they soon discovered that they had been fooled by the warm weather further South. The weather about Petoskey was still toold, the bay was frozon over, the snow was deep in the woods, the prospect for good feeding was bad, and after a day or two of apparent irresolution and many erratic flights, the birds, as if by common consent, took their course to the neighborhood of Platta the time, "they came in clouds, millions upon millions. It seemed as if the entire world of pigcons was concentrating at this point. The air was full of them and the sun was shut out of sight, and still they came, miltions upon millions more." They spread over an area of more than fifteen miles in length and six to eight miles wide, and the prospect for a time was that the nesting would be the most extensive ever known in the State. The news speedily reached all parts of the State, and it is said that in a fortnight's time 3,000 hunters—professionals, smatuurs, green horns—had invaded the country from all directions, surrounding and penetrating the nesting grounds.

It was noticed, however, by old hunters that the birds birds on their journeyings from the South to the far

in a fortnight's time 3,000 hunters—professionals, smateurs, green horns—had invaded the country from all directions, surrounding and penetrating the nesting grounds.

It was noticed, however, by old hunters that the birds did not settle down to donestic life as quickly as usual. The roosting birds—that is those that have not yet mated—outnumbered the nesting birds a hundred to one. Some of the more zealous and inconsiderate sportsmen entered the nesting woods and commenced popping away at the nests themselves, a snow-storm followed, high winds prevailed, and many of the roosting birds, disguszed, postponed their anticipated houskeeping and scattered. The nesting consequently falls far short in magnitude of what was at first expected, though still large in area and containing milloms of birds. It scattered along the banks of the Pattle River, in the two ships of Almira, Zeeland and Homestead. The distance from one end to the other is over ten miles, and the width varies from a few rolts to three or four miles. There are, however, numerous long distances between the two extremes where no nests are to be found, and the birds have occasionally changed their ground, so that many of the lunters themselves are very uncertain as to the exact whereabouts of the birds at the present time. In the nests first made, the young are about ready to fly, and have been abundoned by the old birds, and in some places, owing to the winds and the constant shooting, the nests have been deserted before any birds were hatched.

One nesting is about the same as another, and the first nest you come to is like the million others in the county. When these migratory birds have maded, decided where to settle and lave staked off their claim, they proceed at once to construct about the lightest nests that will hold an egg and a bird. "Three sticks and a feather" constitute about the material, according to a recent visitor here. The feather is often wanting, but a few more sticks are generally added. The nest is placed in the crotch of a tree,

NEW YORK STATE CONVENTION PRIZES.

Following is the programme and prize list of the Annual Convention of the New York State Association for the Protection of Pish and Game at Seneca Falls, beginning May 24th.

In accordance with the usual custom the Secretary will issue to members of clubs only, upon payment of §5 entrance fee, and §3,50 for ten birds, a ticket bearing number of context and number of shooting order. Before shooting off ties members must pay for five birds, and their tickets will be punched. Shooters who drop out of ties will be entitled to relate. All the contests for prizes during the convention are open to members of the Association only, and will be conducted under the rules of the Association:—

TUESDAY, MAY 25TH.

CONTEST NO. 1.—At 8 o'clock A.M. sharp; class shoot; ten single birds; entrance fee \$5.0 charts, and the sharp is class shoot; ten single birds; entrance fee \$5.0 charts, and the sharp is class shoot; ten single birds; entrance fee \$5.0 charts, and the sharp is class shoot; ten single shoot; free fee \$6.0 charts, and \$6.0 chart

winner; M. Todiman & Co., Seneca Fulls; value \$35; a sec of tinge plass-hall traps; A. H. Bogardus, Chicago, Hi; value \$15. Value \$55. Fourth prize—Twenty-four one-pound cans. Dittmar powder Dittmar Fowder Co., New York; value \$30. Five thousand Frag-value \$50. A nation swing baby creatic; Fix Co., Hockester, value \$50. A nation swing baby creatic; Fred Teller, Seneca Falls; value \$0. Value \$56.

WEDNESDAY, MAY 26TH.

CONTEST NO. 3-At 9 o'clock A.M. Fifteen single rises; class most; entrance fcc \$5.

CONTEST NO. 3-AS. O CHOR. A.M. FILTER SINGUE FISCS, CIBS.
First pirks—An elecant whamnerless "breech-loading shot gun; W, W, Greener, England, through Henry C. Squires, agent, New York. Value 500. very hundsome, richly cut decenters, made expressly by the Corning Glass Works, H. P. Sinchair, Secretary; value 50. Parse of 350 gold; Rodenster Hrewing Co., Rochester, N. Y. One hundred and fifty pounds chilled shot; Tatham & Bress, New York; value 50. Faine 518, say, complete, nickel plated and incely finished; the Seneck Maturfacturing Co., Seneca Falls, N. Y.; value 25. Four one-quarter keges Hazard powder; through James Falmer's Son, Rochester; value 555. One glass bull traje, Charles Folkon, New York; value 555.

Fourth prize—Thirty pounds of the Vanity Fair smoking to-acco; Wm. S. Kimbail & Co., Rochester; value \$45. CONTEST NO. 4—A12 O'clock P.M. Ten double rises; class shoot; ntrance fee \$5.

bateen; W.H., S. Kilmonia e. Co. 2000 Co. 18

CONTIST NO. 5—At 8 o'clock A.M. Substituted in place of an amateur shoot. Ten single birds; 12 lyards; entrance few \$5. Prize—\$100 gold; Mitton Hong, Hong House; divided as follows: To person making the second best score of ten, \$40. divided as follows: To person making the second best score of ten, \$40. divided as follows: To harron making the second best score in ties of mine, \$50. to person making the score in ties of nine, \$50. to person making the score in ties of nine, \$50. To person making the score in ties of nine, \$50. Prize—\$55 gold; \$30 by Seneca Gun Club, \$55 by the citizens of Seneca Falls; divided as follows: To person making best score in ties or cight, \$30; to person making score fin ties or Prize—\$45 gold; \$30 to making best score in ties or cight, \$30; to person making score best score in ties or Club, \$55 by Marketon Yeas, \$60, \$20 by Lambert Gosdman, or the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the State of the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the State of the Towshow Harron Warshord and the State of the Towshow Harron Warshord and the State of the State

ties or vight, \$30; to person making second best score in ties of Perio.—\$45 gold; \$25 by Waterloo Yeast Co., \$20 by Lambert Gosdman, of the Towsley House, Waterloo; divided as follows: To person making best score in ties of seven, \$25; to person making second best score in ties of seven, \$25; to person making second best score in ties of seven, \$23.

Price—\$25 gold; Sencea Gun Club; divided as follows: To person making score in ties of six \$15; to person making score in ties of six \$15 co.

Coxyesy No. 4.—A12 o'clock F.M. Single trap shoot for Dr. R. V. Pierce's dimmond badge; value \$850. Fifteen birds, twenty-one yards rise. The badge to be held by the winner each year in trust and to be accounted for to the State Association. The winters of the State Co. State Co

Third prize—Cash \$25.

FRIDAY, MAY 28TH.

CONTEST NO. 7.—A18 o'clock A.M. Dean Richmond trophy. To be held by the winning club each year in trust, to be accounted for to the State Association. To be shot for by three members of a club belonging to the Association, such members to be residents wouly-one yards rise. Entrance foe \$30. Entrance money to go to the club making the highest score at this contest.

Scoond prize—Two thousand shells; Union Metallic Cartridge Company, Hridgeport, Conn.

FRIDAY, MAY 28TH, 2 P.M.

CONTEST NO. 8.—For the Livingston Sportsmen's Association cup, donated by James W. Wadsworth, Genesco, N. Y. To be held by the winning club each year in trust, to be accounted for to the State Association. To be sact for by two members of a for the control of the control of the control of the control of the control of the control in which the club is located. Fifteen double rise each. Entrance Say, the entrance fees to belong to the club holding the cup.

Second prize—One hundred and fifty pounds chilled shot; Tatham & Bros., N. Y.

FLY CASTING-WEDNESDAY, MAY 20TH, 7 to 9 A.M.

Wednesday from To B.A.z. (during which time no shooting till be allowed). Single handed casting, open to all membors. Intrance fee S5.

First prizo—A silver mounted split bamboo fly rod; Messrs. Voaroy, lissett & Malleson, New York; value 500; Cape May vocking chair; J. G. Minges, Seneca Falls, value \$10. Value

rocking chair; J. G. Kinges, Seneca Falls, value \$0. Value \$0. Value \$0. Second prize—A silver mounted split bamboo fly rod, value \$0. Second prize—A silver mounted split bamboo fly rod, value \$0. The winner of the first prize to make his selection. Third prize—A flare assortment of schemor. The prize—A flare assortment of schemor representation of the prize of the p

Defiberate. 10 shots; string measure; distance 10 yards. Entrance \$5.

First prize—Twenty-four one-pound caus diamoud grain powfirst prize—Twenty-four one-pound caus diamoud grain powsite \$25. Sircond prize—One jack-lamp, reflector, bell, etc., with one
doon rust preventer; Albert Forguson, New York. Value \$10.

Third prize—One-half dozen snow shovels, one large box yeast,
one-half dozen wash-boards, presented by Wilson Yeast Manulacturing Co., Waterloo, A. Y. Value \$10.

For bost average in contests Nos. 1, 2, 5, and 5, the FOREST AND
Furbishing Co., New York. Value \$12.

For second best average, a handsome India rug hunting scene,
donated by Milton S. Price, Syracuse, N. Y. Value \$23.

MASSACHUSETTS-Müllord, May 10th.—The [Milford sportsmen held a glass ball shoot at their grounds on Saturday, May 8th, at which the following scores were made out of a possible 20, from Card's rotary trap: John Martin, 17; G. W. Whitney, 15; A. H. Harris, 15; L. H. Barrows, 14; R. V. Brooks, 14; C. B. Fleicher, 14; C. Howe, 13; C. S. Royans, 12; W. R. Dennett, 12; W. N. Barrows, 11; C. White, 9; C. L. Whitney, 8; J. M. Steere, 7.

ATTICA GUN CLUB.-Attica, Ind., May 11th .- Card's rotating trap, 20 balls each.

The club has been organized but a short time, some of the her shooting for the first time from a trap.

Medford, May 15th.—The Merry Mount Club, of Quincy, held a glass ball shoot at North Weymouth Range this afternoon, with the following result at 10 balls, 18 yards rise :-

Natick, May 15th.—The Natick Sportsmen met at their grounds this afternoon, and had another contest with the Cochituate Club. The latter chib took the honors last week, and were so much pleased at doing it that they bought a broom, and came on the grounds swinging it above their heads, claiming they would take it home again. The day was the finest they have had this season, and the breaking was about the poorest. The Naticks made the

best shooting in both single and doubles, and finally captured the The shooting was at 10 single and 10 double, ing is the score :-

New Orleans is. Natonez.—Natchez, May 10th.—Match at glass balls shot here on the 8th inst., between a team of eight men of the New Orleans Gun Club, and a like number from Natchez, reulted in a victory for New Orleans, after a very exciting conto he teams were well matched, and the shooting on both sides ex-

cellent, as the scores will show. Shooting was done at 18 yards rise, three Bogardus traps, Bogardus rules. The match excited much interest here, and the local paper in commenting upon the result says: "The time is not far distant when Greek will again much interest nere, and the local paper in commenting upon the result says: "The time is not far distant when Greek will again more Greek on the classic plains of Chalmotte, and then we predict for Natchez the reward due to the pluck and energy of her little team. We have the pleasure of expressing the opinion of, we believe, the people of this whole community, that the New Orleans team cannot be surpassed in honor or chivalry, by any Oreans tain tender of suppassed in Indio of contary, it amends the most of the tender of victory was awarded to them with a cheerfulness that could only arise from the fullest appreciation of the merits of the individual members of the team."

Massachusetts-Gardner, Man 12th -- A team of the Medford Massachusetts—Gardner, Map 12th.—A team of the Medford Sportsman's Club, consisting of ten riffement, visited the Garden Club yesterday to participate in a friendly match at Hackmatack range. On arrival here a bounteous hunch was awaiting the visitors at Poland's. At its conclusion carriages were taken for the range; traps unpacked and a few sighting shots taken by the participants. The day was delightful at mid-day, but before the shooting began the wind became due north and came down the range quite cold, but even in its velocity. The sun was obscured, the light capital, and all the conditions favorable for good scores. President Knowlton of the Gardner Club called the match at 11.30 o'clock. Twenty mer faced the butts, each manassined to a pa-President knowlmon of the darraner Chib child the matter at Lixy o'clock. Twenty men faced the butts, each man assigned to a paper ring target, a description of which has been previously noted. The first round of ten shots was won by the Gardner team with 743 ring count and 471 Cecedimon. The Medfords vecorded ring count 758 and Creedimon 479. J. B. Osborn was high man for the Medford team at both counts, and Dodge the top man for the Gardners. At the commencement of the second round heavy leaden clouds east their shadows and rain began to fall, but the men kept well to their work, the Gardner team particularly inding the bullseye, and at the finish again led the Medford team 20 points. In this round Ellsworth was high man for the homo team, with \$4, 45, and Osborne again came to the front for the Medfords, with \$2, 45. At the finish of the second round the Gardners had the lead of 63 points; it began to look blue for the visiting team, and Captain Osborne was silent. On the last round quite a gale prevailed; the signal flags and the pretty flags at the batts fluttered every way. No idea of windage could be gained by those signals. The men shotslow and carefully, but they could not reach the home team, who closed for 752, while the Medfords o'clock. Twenty men faced the butis, each man assigned to a panot reach the home team, who closed for 52, while the Medfords had recorded 600, giving the Gardner team a splendid victory of 120 points ahead, while the Medfords led by two points Creedmoor count. The summary gives the details:—

Boston, May 18th.—A delightful day greeted the Walnut Hill
marksmen, who participated in the regular renewed competition
in Everytedy's Match and the 500-yards match to-day. The atmosphere was cool and the wind, strong in the early stages of the
shooting from the north to east, recorded upon the dial 22 to 1
o'clock. The light was perfect, and the fleecy clouds did not
seriously affect elevations. The attendance was not as large as
usual, as the prominent members of the Massachusetts Riffe Association were at Medford to shoot in a feloadly return match with
weathers of the Medford Austern Riffe Association. Among the

MAMMOTH RIFLE GALLERY - Boston, May 14th .- The second week in the All Comers Rifle Match at the above gallery has shown some excellent shooting, outranking the first week, when the work done was very fine. Mr. W. H. Harrison still heads the list, making two more clean scores this last week, making his score 199 out of a possible 200. Mr. E. F. Richardson stands next in order with of a possible 200. Mr. E. F. Richardson stands noxt in order with two clean scores and three spendid thirty-nines, followed by Mr. J. S'ne'll with two clean scores and taree good thirty-nines; but outrants J by Mr. Richardson. Mr. Frank Hollis is next in order, with one clean score and four splendid thirty-nines, and no doubt before the month is ended, will be up with the leaders. The gallery has been well filled, both day and evening, throughout the week, and the incessant crack of the rifle has been heard a good part of the time at this pleasant and popular gallery. The management intend, during the summer months, to offer additional attractions to all devotees of the rifle who practice in the gallery; and to make the Manmoth Rifle Gallery a pleasant and cosy reservice on and all. The following is the standing of the several sort for one and all. The following is the standing of the several competitors to date. 50 yards; rounds 8; possible 40; five scores to win, or possible 200.

Boston, May 13th.-There was a good attendance of members of the Massachusetts Rille Association at Walnut Hill to-day, to participate in the regular competition in the long-range match. The weather conditions were such as to make it very difficult to shoot with any degree of certainty. There were ten entries, and

THE TEAM SELECTION.—The open matches at Creedmoor for places on the team did not amount to much. There were not entries enough to make it anything of a winnowing process. On the first day but five shooters were out, and but two of these could fairly be counted on as possible competitors. On the next

day the list was even shorter, and the last two days' shooting was

pandoned. The score as far as it went stood:—

May 1ith.—W M. Parrow, 211; R. Rathbone, 211; W. H. Jackm, 202; H. Fisher, 199; S. H. Hubbard, 180. May 12th.-W. M. Farrow, 198; R. Rathbone, 192; H. Fisher,

ZETTLER RIFLE CLUB .- New York, May 15th .- Ninth competi-

J. H. Brov D. Miller.

SCHUETZEN NOTES .- Great preparations are being made by the COLUZION NOTICE—Orea, preparations are doing made by the United Schnetzen Association (New York and Jersey Schnetzen Corps) to make the Pair, which is to be held at the Park during the days of June, the 6th until the 20th inclusive, a grand success. This Fair and Festival is given by the Association for the purpose of paying off the floating debt, and beautifying and improving their property, which is one of the most beautiful pleasure parks in the United States, being situated on the western slope of a prominent hill, about forty minutes from the City Hall, New York, and accessible by both steam and horse cars, either from Jersey City or Hoboken. The property is located at Lindon Hill. N. J., and contains 331 acres of beautifully cultivated land, large hake stone custle, fest-hall, shooting hall, farm house, and other buildings too numerous to mention, which, combined with a mag-nificent view and a cool breeze, makes the place a great resort for pleasure. Connected with the Fair will be a prize shooting, with pleasure. Connected with the Fair will be a prize Shooting, with the fellowing programme. Prize shooting begins on the 7th of June, and will end on the evening of the 10th. Twenty-five prizes will be divided on the prize or ring target, first prize to be \$50, last \$4. Entrance fee for three shots, \$2; number of tickets unlimited. On the Man Target, twenty prizes will be distributed; first prize, \$20, last \$2. Entrance fee for three shots, \$1; number of tickets unlimited. On the Bullscyo Target, \$250 will be divided into thirty-three prizes; first, \$25, last, or thirty-third prize, \$2; ten tickets for \$10. The false center is 12, and the bullscyo 4 inches in diameter. The nearest shot to the center will get the first prize, and so on. In addition to this, cicht prizes will be paid for the most, second most, and so on. Bullscyes: For the first most, \$12; for the eighth most, \$2. Distance on all the targets, 300 yards.

ZETTLER RIFLE CLUB.—The spring meeting of the Zettler Riflo Club, which was held at the Union Schuetzen Park May 10th and 11th, was not so well attended as was expected, but the shooters

The New York Schuetzen Corps, Capt. George Aery, holds its annual festival on the 7th, 8th und 9th of June, at the Schuetzen Park, at Union Hill. They invite all shooters of the United States, and especially those of the "Bund," to take part in it. Guests will be welcomed and morning of the 7th of June. ed and received at 24 Market street, on the

A PROTEST AGAINST "TICKET" SHOOTING .- New York, May 8th-Zetter Rifle Club-Gautlemen: --Wo beg to offer our thanks for your kind invitation of May 1st. We regret to perceive in your programme the unlimited issue of tickers on the man targets. It cannot have passed unnoticed by so prominent an association as yours-as in fact it has been observed by all shooterscation as yours—as in fact it mas been observed by all shooters—that this privilege, practiced since a number of years, has been working very injuriously against the general interests of shooting, and we do not hesitate to dechard its so no of the main reasons why shooting has gradually failen from being a pleasure to a money-making affair.

We have decided not to take part at your festival officially, where the tent is the conventional processor.

We have decided not to fake part at your festival omicially, leaving it entirely to the personal inclination of our members. We wish thereby only to express that we take a dec ded stand against a practice of such injurious consequences, and hope that our long-standing mutual friendship will not suffer in any way through this course of ours. Wishing you the best success in your undertaking, we remain, gentlemen, your true friends,

A. METEL CLUB.

A. METEL, President.

A Useless Competition.—New York, May 18th—Editor Forest and Stream:—We notice in your issue of May 5th that the N. R. A. is preparing the terms of a competition between the ordinary ten-pound rides and "those ponderous pieces of ordinare"—the heavy Swiss rides. These latter expressions may leave orroneous impressions. They can only apply to what has been in Switzerland twenty-hev years ago, and to what is yet in use only with some Gorman shooting clubs here incapable or unwilling to take any progressive steps.

In Switzerland the militia has been provided for about fifteen years with the "Vetteril," a breech-loader considered by the highest authorities as still the best military ride, without exception, and at all the shooting festivals only "Vetteril" or "Martini" rides are used. They weigh eleven pounds, have At ealiber, and carry with precision 500 meters, but no other style is allowed than standing, and a company of the control of the standing of the control of the standing of the standi A USELESS COMPETITION .- New York, May 18th-Editor Forest

curry with precision 500 meters. The shooting is generally cone at 300 and 500 meters, but no other style is allowed than standing, of-hand position; with no artificial rest and no artificial sight. We cannot see any practical value in a competition as proposed Why go back to olden times? There is a good deal of progress to be made yet in the way of shooting with breech-loaders. Let us put our energies to that, and let old ponderous muzile-loaders alone. Some Members of the Helyetia

Brinton, May 15th .- Sharps Match for military rifles, 200 yards : Same Day .- Ballard Match, any rifle, 200 yards ;-

A. Brown 4 5 4 4 4 5 4 4-4: WASHINGTON, D. C., May 15th.—The Columbia Rifle Association shot its fifth and last of the pre-arranged spring series of weekly shot its fifth and last of the pre-arranged spring series of weekly subscription matches on its range at Benning's last Saturday. Barring wind, the conditions were favorable, a good light it felling to mirage, a dry air, high barometrical pressure, and a pleasant temporature, ranging from 81 to 62 degrees, being its main characteristics. "Old Prob.," however, slipped up on the wind, which blew directly down on the range with liftful, fish-tail fury, chopping with startling rapidity from either side of the 12 c'dock on the great dial, necessitating frequent changes of from three to air points' windage betweenshots. Under these cframsstances, when the match was called at 2.45 r.M., doubts were freely expressed whether any of the five competing marksman would reach 255 out of the possible 25. Dr. Scott, Col. Burnside Mr. Walter Scott, Mr. Lauritzen and Mr. Adec entered. It became evident early in the 509 yards' shooting that the Doctor's arduous training as a "ish-tail shot" made him at home in the troublesome manipulation of his wind-gauge, which the changing guats entailed, and the white owl popped loyously into view as he sent in shot after shot to the very close of his string, giving him a clean score to the surprise of all, his worst shots showing a comfortable elbow-room of black on the margin of the builiseye, to which three powerful telescopes were directed in keen susubscription matches on its range at Benning's last Saturday nim a clean score to the surprise of all, his worse shots seconing a comfortable elbow-room of black on the margin of the bullisore, to which three powerful telescopes were directed in keen suspense. Col. Burnside's 89, admirable as it was, full quite into the shade beside this splendid performance, while the others, steady shots though they were, had to content themselves with 63 and even 60. During the 900 yards' shooting, the wind, although less strong, was even more erratic in its sudden choppings, the marksmen often lying down with 11 o'clock windage on, only to send their builtes through a smart 1 o'clock puir. Mags, and occasional ravens, sprinkled all the scores except the Doctor's, but he again came to the fore with a very exhibitant part of the fore with a very exhibitant part of the different wither following with a good 70, in which, however, the jackdaw once appeared. The remained price of 8,66 and 65. At 1,600 yards the wind fell still more, but remained tricky to the end. The Doctor, after opening with a high builtseye, met on the next round with his only misfortune of the day in a 12 o'clock Jackdaw, due to a sudden change in the light, which carried the Colonel's Slig over the target into the Amecsatia beyond on the jackomy, due to a sunden change in the light, which carried the Colonel's flug over the target into the Ameostia beyond on the following shot. A capital 72, however, rowneded the Doctor's painstaking efforts, he dropping but one point thereafter on his seventh round, and his aggregate was announced by the secore as 220. Watter Scott's 70 and Mr. Adee's 68 were the next best totals. The two leading tallies were found to be as follows, Dr. Scott's younger brother being a good second :—

| Dr. S. I. Scott | \$00-5 900-4 1,060-5 | 5 5 3 | 5 5 5 5 5 5 | 5 5 | 5 5 5 | 5 6 | 5 5 5 5 | 5 5 | 5 5 5 | 5 5 5 | 54 | 5 5 | $5 - 75 \\ 5 - 73 \\ 5 - 72 $ 22 | 3 () |
|------------------|----------------------------|-------|-------------------|-----|-------------|---------|-----------|-----|--------|-------------|---------------|-------------|------------------------------------|-------------|
| Mr. Walter Scott | \$00-4 9(0-4 1,000-5 | 5 5 | 4 3 3 5 5 4 | 5 5 | 5 5 5 | 5 5 5 5 | 5 5 5 5 3 | 544 | ł ā | 3 5 5 | $\frac{4}{5}$ | 5 4 5 | $5 - 65 \\ 5 - 70 \\ 5 - 70 \\ 20$ | ď |

(1.0.0-5 5 5 4 5 5 5 3 4 5 5 5 3 4 5 5 5 6 4 5 5 7 0)

The five contests thus shot, without regard to weather, according to the programme arranged by the club long beforehand, determine the Columbia Rifle Association's representation in cundidacy for a place on the Dollymount team in favor of Dr. Scott. His record (be having shot in all five matches) is 2.55, 200, 200, 207, 220-1,051, an average of 210 1-5.

His record (he having shot in all five matches) is 235, 200, 200, 207, 220-1,631, an average of 210 1-5.

Wherling is. Washington—Wheeling, W. Va., May 10th.—On the 8th inst. our team of three men, selected from the Wheeling Ride Club, shot a telegraph match at 500 yards with a team of the same number from the Washington, Pa., Ride Club, under rules of N. R. A. Phing commenced at 3-20 o'clock, and continued until after 6, each diffug 20 shots. Owing to the hilly nature of the surrouding country, the only available piace for a range of any length is in the valleys, through which very perplexing winds circulate, and the reflemen must shoot through whirlwinds and cross currents most of the time. About two years ago there existed a ride club here, of which Prof. Dwight was a prominent member, and when the American Ride Twine of 7% was elected, he was the only member west of New York. The interest, however, subsided for a time, but last fall it was again reseascitated, and a new club organized with about afficem members, all of whom have made rapid and steady improvement in shooting. Until a few days ago, the practice was confined to short range of rhand work, but the probability of having some competitions at min-ringe in our neighbors, caused the club to creat a 500-yard target has tweek, and arrangements were completed for a telegraph match between a team from our club and Washington, Pa. The team was put into practice at the new distance by Mr. Dwight, and had only had three afternoons' experience when they faced the targets for the contest last Saturday. This had been enough to accustom them to the hold and position, and with Mr. Dwight's abole about wind, they have made personne when they faced to targets for the confest last Saturday. This had been enough to accustom them to the hold and position, and with Mr. Dwight's help about wind, they have made a score which is very hard for any new team to equal, and of which they may well feel proud. Wheeling has reason to be proud of her parsmen, and if our ridemen continue she will soon have the he same privilege of pointing with just pride to her rifle Below is the score of each team:—

1.—For the heat Unglish setter doe, native or imported (to be competed for by the V. H. C. winners, one ried out and engraved same, value \$28, presented by George C. Sterling, Esq. Winners M. G. G. For the best kennel, of not less than five imported English sotters, to be composed of dors and bitches, owned by one person (pupples not allowed to compete), an imported Mirzapon rug. There were two competitors, namely: Mr. A. H. Moore's, Phiadelphia, Duke of Beaufort, Roderick, Count Dan, Luan May, Lass O'Gowrie, Ruth; D. T. Charles, Albany, N. Y., Nina, Rosa, Sam, Wellington, Crickot. Mr. Charles was awarded the prize.
H.—A clib medal will be given for the best black setter dor; There wordeneys, H. S. H. Mordeney, H. S. H. A. H. Mordeney, H. S. H. A. H. Mordeney, H. S. Samt.
I.—A club medal will be given for the best black setter dor; drickly, Providence, R. I., Smit.
I.—A club medal will be given for the best colley bitch, providing a bitch does not take the prize in the regular classes Winner: Dr. J. W. Downey's, New Market, Md., Lassle.

PHOTOGRAPHS OF SIR WM. VERNER'S DOGS .- Three ex PHOTOGRAPHS OF SIR W. VERKER S DOGS.—Heree ex-cellent likenesses of the famous winners Tarquin, Super-bus and Donald, have just been sent to us by Mr. Luthers, who had them in charge at the show. Mora is the artist, and he has, in his new departure, done the champion invited. instice.

Photograph of Ray.—Mr. Henry W. Livingston, of 133 West Forty-second street, this city, has kindly sent us a photograph of his champion English setter dog Ray. The picture is a good one, as pictures of this kind go. It was taken by Pach, Broadway above Thirtcenth street.

ENGLISH KENNEL CLUB FIELD TRIALS.—The report of the National Spring Meeting, held on April 27th, 28th, 29th and 30th, has been unavoidably crowded out of the last two issues, on account of the unusually full and complete description of the New York Bench Show.

Dogs at Auction.—About sixty dogs were offered for sale at auction, on Friday of last week, at the mart of Messrs. Baker & Son, Broadway and Thirty-ninth street, in this city. Some of the animals present had been exhibited at the Bench Show, but the majority of them were tolerably good-looking mongrels of the non-sporting classes, below the show standards. The prices paid for those actually sold (as some lots were merely bid in) were, in most cases, low, although a few of the finer-looking animals bearing some resemblance to Llewellyn setters, Newfoundlands, etc., brought fair prices. A few private sales were also effected.

KENNEL NOTES.

Bred.—Jessie-Faust -The St. Louis Kennel Club's Faust has been bred to Mr. C. C. Pettit's (Galveston, Texas), Jessie. Duchess-Rush-Mr. George Van Wagenen's champion pointer Duchess to Mr. Edmund Orgill's champion Rush. Di-Young Laterack—Mr. W. F. Steel's half Laverack setter bitch Di to Mr. John C. Higgins' Young Laverack, by Blue Prince, out of Fairy. Di out of Dr. Gautier's Ruby, by his Dan and half sister to Daisy Denn.

Sales.-Bow-Jaunty Puppies-The St. Louis Kennel Club has sold to Mr. P. H. Adee, of this city, a dog pup out of Jaunty, by Bow, and a bitch of the same litter to Mr. J. W. Jackson, of Opelousas, La.

WHELPS.—Rose—Mr. L. W. Sharp's (Hammonton, N. J.) Rose Gildersloeve-Lark, whelped, May 7th, ten puppies—five dogs and five bltches—by owner's Frank. The puppies are all pure white. Jaunty—St. Louis Kennel Club's Jaunty has whelped nine pupples-three dogs and six bitches-by champion Faust. all liver and white,

NAMES CLAIMED—Frolic and Frisky—Mr. McDonald, of Rockland, Mc., claims the names of Frolic and Frisky for his liver and while cocker spaniels, Spot-Fire. Pride of the Penobscut—Mr. McDonald, of Rockland, Mc., claims the name of Pride of the Fenob Donaid, 01 Rockland, Mc., claims the name of Pride of the Penolsect for his lemon and white pointer bitch, by Dash, out of Pride of the Beaver. Deauty—Mr. M. L. Kline, of Kittanning, Pa., claims the name of Beauty for his liver and white cocker bitch, bred by Theo. Meyer, out of Lou, by Young Shot. Lou out of Mr. Hamilton Thompson's imported Eureka, by Mr. Berrs-legy's imported Nip. Young Shot out of Watson's imported Rose, by Watson's clanning Shot, whelped the 23, 18-29. champion Shot, whelped Dec. 23d, 1879.

NAME CHANGED .- Donnybrook II. to Drake-Lieut. C. M. Rocke feller, J. S. A., Fort McPherson, Neb., changes the name of his red Irish setter doz, by champion Eleho, out of Lulu, from Donnybrook II, to Drake.

PRESENTATION.—Young Laverack—Mr. John C. Higgins, of Delaware City, Del., was presented on Friday last by Mr. Charles H. Haymond, of this city, with the well known setter Young Laverack. As this dog is the only orange and white Laverack In America, Mr. H. has received a prize worth having.

—One of the stands at the show was occupied by H. C. Glover, proprietor of the Imperial Kennel, Tom's kiver, N, J., who had an opportunity of introducing his excellent Mange Cure to the attention of owners of stock.—Adv.

For Mange, Surfeit, Scurf, External Canker, Scratches and all other diseases in dogs, horses or cattle, use Glover's Imperial Mange Cure.—Adv.

THE THEORY AND PRACTICE OF AIMING.

MR. MAURICE THOMPSON, and his brother, Mr. Will H. M.R. MADRICE THOMPSON, and us protuce, ar. wm u.

Thompson, have prepared a revised and enlarged edition of
their manual, "How to Train in Archevy," which now forms the
most complete handbook on the subject published in America.
We may go farther than this, and say that for one who wishes to
perfect himself in bow shooting, this book is the most comese,
ample and intelligible work in this whole literature of archery.
We have the cammend it to movices, nameteurs and experienced

ample and integration of a reflectly.

We hearfilly commend it in novices, anatorus and experienced a experienced.

The noticeable additions to the book are the chapters on Alming and the Digest, which must have been compiled at great labor, of all the especially notable archery gene of English and American can bowmen, from an early date to the present time. This chan

ings from 1811 to 1879, with the names of chatunians and their win-

A portion of the chapter on Aiming we have been permitted to publish here. For the complete essay we must refer our readers

to the book itself:-

to the book itself:—
"Mr. Horace A. Ford, the celebrated English archer, wrote a great deal in regard to the practical parts of his favorite pastime; but his system of aiming is the only really valuable addition to archery knowledge contained in his book. For target practice at the ranges of the York Round, no improvement can ever be at the tagges of the Cota Route, no improvement can ever no made to his system. It is simply perfoct as a theory, and its ac-curacy in practice has been demonstrated, not alone by his own incomparable shooting, but also by the grand scores of Holmes, Bramball, Spottiswoode and Palairet in England, and by the best archers of America.

"No archer who neglects to completely master the theory of aiming can ever pass mediocrity in the use of his tackle. Aiming is, in fact, just as indispensible to the archer as to the rifleman, and the aiming must be just as carefully and correctly done in bow shooting as in rifle shooting. Why? First: to secure a uniform method of shooting. Second: because it is the only guide to keeping both the line and the clevation.

"If the mercest tyre in archery will but reflect a moment, it

cannot fail to occur to him that the one great drawback to accurate bow shootine is the seeming impossibility of getting any aim with an arrow. The first question he will ask is: 'How can I take sight?' This question is the most important one in archery, and also the most difficult to answer. However, the reader need but to give careful attention to the following pages to acquire all that can be imparted by words touching Ford's theory and practice of aining, as we have taken it from his book, and as we have proved it at the targets with scores second only to his very best.

The first principle of siming is to be sure to have the arrow in drawing, directly under the right ope and lying directly in the line of vision of that eye as it looks at the point of aim. To do thus perfectly, observe the following directions:—
"I.—Take position and knock the arrow as heretofore de-

-Take position and knock the arrow as heretofore described.

"II.—Raise the bow with the left hand, drawing back the string with the right hand as the bow is lifted.
"III.—When the left hand has reached the due elevation for the

"IV.—The aim being thus taken, finish the draw by bringing

"IV.—The aim being thus taken, finish the draw by bringing the right hand to a point just below the chin, and there loose. "If the above rules are strictly followed, and the arrow, from the fixing of the aim to the point of loosing, has been all the time kept under the right eye, the shot will be in the direct line of the vision of that eye. The reason why it must be insisted upon that the entire length of the arrow be all the time kept casetly under the aiming eye, may be thus explained: Your aim being taken over the point of your arrow in the line in which you desire to shoot, it is plain that if the nock end of your arrow be either to the right or the left of your line of vision, your missile's flight will be at an apple to that line, and consequently will be bad. In other words your right eye looks along a straight line to your point of aim.
"This line of sight lies in the vertical plane of the trajectory of your shot. To make your arrow keep in this plane, it must be

"This line of sight lies in the vertical plane of the trajectory of your shot. To make your arrow keep in this plane, it must be started in this plane. To start it in this plane it must be drawn and loosed with its entire length lying therein, which can only be when it is kept directly under the aiming eye. To physically demonstrate this linportant principle, suppose a string stretched straight from the eye to the point of nim. The object is to keep the flight of the arrow in the vertical plane of this supposed string, which can only be done by keeping the nocks as well as the point directly in the line of the vision of the aiming eye. Hence the proper point to loose or out it he string and let go the.

form unecuty in the me of the vision of the naming eye. Hence the proper point to loose or quit the string and let go the arrow is just below the chia directly under the right eye.

"In following this practice of aiming, the upper limb of the bow must be stanted to the right sufficiently to carry the bow-string entirely out of the vortical plane of vision of the right eye. otherwise two troubles will arise. In the first place, the string will be between the eye and the arrow; and secondly, the string will to between the eye and the arrow; and secondly, the string will touch the chin before the draw is finished to the loosing point. When the bow is slanted to the right the arrow can lie

point. When the bow is stanted to the right the arrow can lie directly under the eye, while the string is drawn to the loosing-point under the chin, and when let go, the arrow will ly directly away before the eye in a perfect line.

"Before a beginner in archery can successfully practice aiming on correct principles, he must fully understand the laws of vision connected therewith. By fixing the eyes steadily upon some distant point, it will be discovered that this particular point is seen by direct vision, and all others by indirect vision. Now, in alming, the direct vision is fixed upon the point of aim, and the pile of the arrow is made to cover this point; but the gold of the target and the entire length of the arrow are seen by indirect vision, except when the gold, as in onint-blank shooting, is also the ion, except when the gold, as in point-blank shooting, is also the

The first thing then to master, is perfect control of the vision "The first thing then to master, is perfect control of the vision of the right vop. To do this, some archers are compelled to close the left eye, a very ill appearing thing indeed, which should by all means be avoided. To test your vision take an arrow by the feathered end, and hold it in the right hand pointing it at some distant object, keeping both eyes open. When the point of the arrow seems to cover the object, close the left eye. If then the object is vitil covered. object is still covered, you are alming with your right eye. A little practice in this way will perfect your vision so that you can aim with your right eye and at the same time keep the left

The author then discusses the point-blank range, and the aim when the point of aim is above the gold. The book may be procured of E. I. Horsman, New York.

HIGHLAND PARK,-May 14th.-The following scores were made this afternoon in a contest for one-half dozon arrows. Only those were allowed to compete who never at 60 yards had made a score of 100 with 24 arrows. Number of arrows 48, at 60 yards:—

Frank B: Green 132 133 133 134 1418, Score, W. M. Goodridge. 23 108 10dman Carter. 14 58 F. H. Beche. 19 81 Geo. D. Boulton. 18 58 Geo. C. Balal. 23 77

New York Archery Club.—The Park Commissioners having found it necessary to change the days of shooting, this club will hereaster practice upon the Archery Lawn, in the Central Park, Mondays, Wednesdays and Fridays. From appearances, it will only take one more month to complete the full membership of the club, as new members are applying very fast. The club hopes to make an extra attraction on the lawn Decoration Day, and all anticipate a grand shoot.

NEW YORK ARCHERY CLUB.—New York, May 17th.—Editor Forcet and Stream.—In Your pauce of last week, under the head SKOKIE.

or also contains a complete list of all the English National meet-

of "Oritani Archers," it is stated that they had sent out four challenges, none of which had been accepted. I wish to speak for one of the clubs that received a challenge trom the above club, and say that the New York Archery Club did accept their challenge some months ago. The club made a provise, though, at the time, that the team opposed to them should be composed of two ladies and four gentlemen, and all should be members of the Oritani Club, residing in Hackensack. I will state that we have never heard anything further regarding the match, and have never heard anything further regarding the match, and suppose it must be off.

suppose it must be off.

The reason for our action was that we did not care to shoot against a team of gentlemen entirely, or one composed of members of other clubs besides the one sending the challenge. Since the acceptance of the above challenge, as you are aware, the New York Club has put ifself on record as opposed to teams composed of any but its own members, and will never place a team in contest with such a make-up. Jas. W. Auten, Jr., Secretary New York Archery Club.

Monday evening last the club gave a concert at the armory of the Effth. Regiment, where some fire hundred of the steinberge.

Monday evening last the cub gave a concert at the armory of the Fifth Regiment, where some five hundred of the friends of the members assembled and listened to a choice selection of sing-ing, reading, etc., and from the hearty applause and frequent en-cores we are sure all spent an onjoyable evening. We trust the New York Cub will again bring talent together for their friends' amusement, and we heartily recommend the

for their triends amissement, and we heartily recommend the club's endeavors to increase the interest among its members by introducing social enjoyments from time to time, as they have done during the past winter.

Gricket.

MANUATTAN US. COLUMBIA COLLEGE.-The third match of the collegiates was played at Prospect Park, on Saturday last, against the redoubtable eleven of the old Manhattan Club. Clear weather, a fairlish wicket, and the smart fielding of the collego team gave to the match a snap that did much to make the game interesting to the spectators and exciting to the contestants. The home team

presented an unusually strong eleven, seven being the club's old stand-bys; and the addition of James Norley, brother of the St George's old professional, Fred, did much to give the side an invulnerable look before the game commenced. However, the visitors began in a plucky way and nearly avoided a defeat, which resulted only by twelve runs. In batting, the collegiates have much to learn, as only two or three of their number were acquainted with the game before least season, but they shine out in their fielding, and both Clarke and Conover are first-class bowl their fielding, and both Clarke and Conover are first-class how-ers. Norley fell to the first ball in the first innings, but gave a sample of the orthodox English professional style, in the second. His cutting was sound and clean, and his defense admirable. Morris, behind the wicket, was in splendid form, and Torrey, in same position, shows that he is in the right place. We can only reiteract the opinion which we have frequently expressed—that Clarke's system of training and handling his men is not only a credit to hinself, but to the cricketers of New York. Before passing to the score, we must mention the superb liciding of Lawson, on the college team, the patient batting of Emmet. ad the finished style of both Morris and Clarke :-

The Merion Cricket Club, of Ardmore, signed the contract for their new club-house on May 3d. The architectural designs, in the old English style, which we have mat the placetar of inspect ing, are the most perfect of the kind we have ever seen. The club-house will have a front of 72ft, and will be one of the most picturesque cricket buildings in America.

—A now club was formed at Napanec, Ont., May Ist, Mr. W. W. Daly, Secretary. There were over fifty cricketers present at the meeting, and considerable enthusiasm was manifested.

—The Newark Cricket Club, of New Jersey, has begun to chirp.

It has secured a splendid location for a ground, and is creeting a club house on it. There are a number of excellent players ready to take hold of the game. JOHN MILLS, Secretary.

-The Orange Cricket Club, of New Jersey, held its annua neeting on April 29th, and elected officers for the season as follows: President, George Payne; Vice-President, A. F. Irving Treasurer, W. Varndell; Secretary, W. Wilkinson. The Center street grounds are being put in thorough order.

-The St. Mary's Cricket Club, of Canada, was reorganized on May 1st, Mr. H. B. Morphy, Secretary. The club will present a strong eleven this season.

BELMONT CRICKET CLUB.—One your ago this rising and well-managed organization, of West Philadelphia, opened the season of 1870, with a list of active members numbering 50; contributing members, 20; juniors, 30; to-day the club commences the season of 1890 with a total membership of 509, as follows: senior members, 24; juniors, 30; and a ladies out-door club of 183 members. Such is the grand increase, when tact is shown and good work accomplished by a capable management. The resum of 1sts tessons shows that the Belmont Club played nine first cleven and nine second cloven, besides several third and junior matches, of which, unfortunately, there has been no record preserved. Of the first, two were won, Philadelphia and Chestant Hill, and seven lost, Germantown, two matches, Merion, Young America, Staten Island, Haverfordians and Girard. It is only fair to say, however, that a determined fight was made REPLYONT CRICKET CLUB .- One your ago this rising and well-

Young America, Staten Island, Havertorousias and Giraro. It is only fair to say, however, that a determined fight was made against the Young America Club, the score standing 113 to 130. Although the Belmonts contributed more runs off the bat, their bad fielding lost them the match. With the Girard they played a close game, 103 to 105, and were defeated by only three runs. The return match with the Germantown Club was both interesting and close, the rapid falling of that club's wickets in the second

and close, dot again rating of the Belmont's bowlers. Had dispersion that the excellence of the Belmont's bowlers. Had there been more time the result might have been different. Tho second eleven played nine matches, winning five and les-ing four; playing even games with the Merion and Philadelphia. beating Chester City twice, losing against the Dorian and Germantown, and winning against Young America. There were a few third cieven matches played, and these were a source of salisfaction to many of the younger nembers. The juniors were attered to the juniors of other clubs, and carried all before them.

They won every match. We quote from a very pleasant and chatty letter, received from a prominent member of the club, or They won every match. We quote from a very pleasant and chatty felter, received trown a prominent member of the club, on this subject and on the prospects for the conling season: "Our juniors, toward the close of the season, could not get up a match with any other club, without first promising to but some of their hest players. We heard that several of the club objected to the size of our juniors, and even presumed to question their age. As to their stature, we confess to the soft impeachment, they are large (the cantain is over six feet in his stockings), but we aro large (the edpain is over six feet in his stockings), but if cannot help it. As to their age, we kept a careful record, but if a junior should reach the age of sixteen during the playing season, we have decided that he may play as a junior during the remainder of that year. In reviewing the past season, the fact our first eleven was very often beaten is not to be overlooked. our instance was very orten boaten is not to no overnomen, but if any cricket club should therefore have an idea that we intend to give in, they will make a great mistake. We mean to go at it again, though like the man in the rhyme, who 'jumped into the brainble bush,' we came out with a badly damaged record; we mean this coming season to jumn right in again, and try if we

we mean this coming season to jump right in again, and try if we cannot seriatch some winning scores back again."

The officers recently elected are: President, John P. Green; Vice-President, Wm. N. West; Trensurer, Harrison Townsend: Secretary, Osear A. Knipe, address, No. 213 South Fourth street, Philadelphia; Committee: The President, ex-affelo, George Morgan; Clarence North, Wm. W. Porter and Class. H. Varnall.

The club held its opening day on May 6th, when over 300 members were present. The committee has already arranged for twelve fixtures, and shortly all the blank dates will be filled.

-Princeton College has a new cricket club.

-We have received from Wright & Ditson, of Boston, a copy of their eight page "Journal of American Pastimus and Price List," which will be mailed free on application. See advertisement in another column.

-During the afternoon of the Staten Island Columbia College match, sneak thieve entered the club house and stole two gold watches, a pocket-book, and other articles belonging to the visi-tors. These robberies are becoming very common on our cricket, grounds, and show the advisability of having proper notices of warning posted in every club house.

-The Young America ground has a two-ton roller. We look for large scoring there this season.

Young America (Milwaukee) 28. Day View.—The opening game of the season was played by these clubs on May 1st at Bay View. Only one innings each was played, the victory resulting in favor of the former by a score of 62 to 27

— may or the former by a score of 62 to 21.

—The Toronto Crickec Lub held a special meeting on May 11th, with J. O. Howard, Esq., in the chair. There was a large attendance, and after much discussion it was resolved to join the Ontario Cricket Association.

The Longwood Cricket Club, of Boston, is entering upon its fourth season with a much better eleven than ever before. It probably will make a tour through Canada early in July.

The Grand Club, of Philadelphia, has leased an excellent ground on the Frankfort road. The members of the club intend to turn out an eleven that will trouble the best teams of Philadelphia.

-The Fall River Club, of Massachusetts, has elected a —The rail river Citi, of Amssachisetts, has elected a large number of new members, among whom are several excellent players. At a recent meeting the following officers were elected for the ensuing season: President, Chiss, West, Viceo-President, Win, Burgess; Treasurer, Nathan Crabtree; Financial Secretary, Win, JI, Travis; Corresponding Secretary, Alfred Clark; Captain, John Nightengale; Committee, W. Wood, Goo. Watters, George Sharpe and John Nightengale.

-The Ottawa Cricket Club opened on the 8th inst.; match between Old Country and Canadians. The former won with a score of 131 against 89 in a one innings match. The Marquis of Lorne baying injured his arm playing at rackets could not captain his

-The Stouffville Cricket Club, of Canada, has organized with Mr. E. O'Brien, Secretary.

-The Hastings Cricket Club, of Canada, has elected officers with Mr. H. F. Sharp as Secretary.

AN OLD NEW YORK CRICKETER,—New York, April 29th,—A few days ago, while taking a stroll through the pathways of Central Park, my attention was drawn to the notable difference between the turf bordering the west side of the big North Meadow tween that it must concerning the west sate of the organization and into by the rest of the pathways. So great and marked was the most ofference in keeping, that I came to inquire of a Park police man (ifference in keeping, that I came to inquire of a Park police in cases and finish of keep; when I learned, to up association with that it was due to Unicel Benjamin Bates, and old-time St. George's Cricket Club ground-keeper, of the days of '53, when the club had its grounds at the Red House, Harlem, Uncle Ben and Sam Cricker Gills ground-keeper, of the days or 3.5, when the of thin hid is grounds at the Red House, Harden. Uncle Ren and Sam Wright for years kept the grounds in order, and these two favor-like are as well known to the old members of the St. George? Cricket Club as the Forest and Stream is to its readers. Well knowl to the deep interest taken in Uncle Ben, I will gire, for the benefit of your readers, a few items in his eventful life. Unch Ben Bates was a well-to-do Englishman by birth and education and was a member and keeper of the old club grounds at the renowned roadside inn known as the Red House, kept by Charle. Brooks, at that time a great resort of the sporting gentry of the day. Here was always to be found the wealthy backer of the St-Adv. Here was always to be found the wealthy backer of the St George's, Mr. Sam Nichols, who on all match occasions would tolerate no person but Unicel Ben Bates and Sam Wright to put the grounds in order. In after years Uncle Ben met with mis-fortunes, and his friends had him placed on the police in its honest fortunes, and instructions and mis pacetors of price in the fortied days. In this capacity he fatthfully performed his duties for the period of thirteen years, arresting in his time the noted thieves, Dan Noble, Wes Allien and Mosher and Douglass for pirucy on Capt. Hoyt's vessel. The last year of Uncle Ber's police life was spent at the Hardem Bridge at Third accune, where he recovered no less than twenty-three stolen horses passing from the West-chester side on route to the New York marts. Uncle Ben med with a severe accident while in the act of arresting a noted thief chester side on route to the New York marts. Uncle Ben met with a severe accident while in the act of arresting a noted third at the bridge, when he had his hips crushed, and hus since been employed in the Park. Here the old veteran will be pleased to have a chat with any and all cricketers, but especially the gentlemen forming the St. George's.

FIXTURES.-Our list of fixtures for the season is the most com-FIXTURES—Our list of fixtures for the season is the most com-plete published. As aircady the dates of several clubs have been found to clash, we call attention to the growing necessity of so-arranging dates that they will not interfere with one another. The increase in "union" or "open" matches will be so great the coming season that it will be worth while to give owners an op-portunity of taking them all in during their rounds. A little at-tention to this in time will save nucle annoyance and make wholesale racing as popular as it ought to have become long ago.

wholesale racing as popular as to again to a decembering ago. Liberal purses and combined action will produce all the entries wanted, without resorting to the old woman's cure of handieups YACHTING NEWS,

BUFFALO YACHT CLUB.-At the May monthly meeting some very sensible rules were adopted. Yachts are divided into two classes—over 35ft, mean length and under 35ft. Races are to be saided in the latter part of June, July and August, the Regatin Committee to have entire control. This is as it should be, Judgee, referres and the like ought not to have any existence in yacht racing; the committee should entertain all appeals, and their de-cision be final, except an appeal to the Executive Committee of the N. V. A. The start will be a dying one, at the second gun; no leway allowed for the slow-coaches or laggards, which is anno keway allowed for the slow-concents of aggards, which is another good point. The new dub-house is 20x2fff, one story, with taleony; finished in fastlake style. The following new members were elected: i.y. H. Ordone, 58H, sloop now building; A. Lehnhart and D. T. Nicholson. Besides the above, three new yachts are building—eme for J. S. Provost, one for T. P. Frank, and the are building—one for J. S. Provost, one for T. P. Frank, and the third for F. H. Driggs, of Dunkirk. An active season is antici-

ROYAL CANADIAN YACHT CEEB.—The annual meeting was held ROYAL CANADIAN YAURT CLIL.—The annual meeting was held May 8th. It was proposed to inove the club house to the island owing to the encronenhactar of the railroads. The following officers were elected; Camunolore, A. R. Bosse ell; Ylee-Commonlore Jan. Loye; Captain, J. H. G. Hagarty; Hon. Secretary and Trousurer, J. H. Ginssett; Analitors, George Bethune and John McNabb; Committee, Messes, R. P. Sucvens, A. G. M. Springer, W. G. Bains, J. H. Ferguson, S. B. Harman, J. E. Robertson, G. F. Harman, W. Hope and Dr. Springer, A. new yacati of 17 forms has been launched for Mr. F. O. Innes, said to be a time scagoling model. The 10-ton yaur recently built by Cuthbert, of Trenton, has given excellent satisfaction, and does well to windward, for she draws 3ftr, although a center-board boat. From South Bay to Port Hope she averaged 10 miles per hour, equal to about 8 knots.

MONTREAL VACHT CLUB.—The fourth annual meeting of our thourishing club was beld at the club house, Longueun, May Sth, which has recently been refitted and supplied with the yachting which has recently been reditted and supplied with the yachting journals of England and the Forest AND STREAM of America. We now have It sailing yachts from 3 to 13 tons, 4 steamers and 18 members. Opening erules, May 21th, The following are the officers for the year: Commodore, Dr. Chats, Brewster; Vice-Commodore, Angust J. Melintosh; Severleary, F. W. Evans: Frenz-urer, Henry Melintosh; Committee, A. A. Tracy, C. P. O'Connor, Z. Lefebre, J. Lesperanco and D. Eastly. I send you copy of one club book.

MASSACHUSETTS YACHTING ASSOCIATION.—There appears to be cloud already on the horizon of the Massachusetts Y_* $A_{\rm H}$ as the

clubs mentioned in your notice of the Association sent only an unofficial representative to the committee meeting held last week, who complained bitterly about the way things were carried on, and rules made by one or two clubs, without any consideration whatever being made for their opinion.

Sucrement what there them made for their opinion. In agridating the question of something besides a length measurement, I am surprised that the tonnage measurement should meet with so much opposition. I think that the main trouble is that it is so little understood, and I do not doubt in the least that some of those who have so much to say in opposition to it do so because they do not understand it, and because it is something dilerent from what they have been accustomed to. M.

Salem, May 4th.

COOPER'S POINT YACHT CLUB.—Our regatta came off to-day,
May 17th, and was a grand success. Wind very heavy from south,
southwest. Started from a lee shore. Ten boats entered, but
only eight lived through it. The Cohill started fifth, and after
a ten-mile run, when off the Block House, she took the lead, followed by Schuck and Springer. Rounded Chester buoy at 12.58
(Springer, 1.03; Fitch, 1.04. Cohill still led coming home, and
crossed the line at Cooper's Point at 3.32; Norcoss, 3.37; Schuck,
3.37; Fitch, 3.37; Kramer, 3.33; Kramer, 3.34; Tramer, 3.35; trang, 3.34. The distance run
was about forty miles. This is the fourth time the Cohill has won
the champion flags in other regattas. She was sailed by Capt.
"Swallow" Martin.

QUINCY Y CHE CLUB.—The opening race was sailed May 15th off Quincy Point. Course for second class nine miles, for third class six miles. First and second prize in each class. Sund moderate from East. Judges: Jus. T. Penniman, Nap. B Furnald and Samuel Bass. Summary as under:—
SECOND CLASS.

| Name and Owner. Glance, Murray Knight. Topsy, Charles E. Kent. Wildire, H. A. Keith. | . 19 | 10 7 | H. 1 2 3 2 3 | tual nc. M. S. 12 13 10 59 1e not | H | 56 56 | . S. |

EMPIRE YACHT CLUB.—The race for the Dowling Challenge Cup was sailed on the Harlem, May 17th. Course, Eighty-mints street to One Hundred and Sixteenth street; surf and finish off the club-house at One Hundred and Fourth street. Sail over flye times. Earlies limited to twenty-three feet length. Only two started, Sophia-Emma, Jacob Varian, twenty-one feet nine Inches long, and Comet, Win. Decker, eighteen feet three inches long. The latter was overmatched, and Sophia-Emma won easily. The cup must be won three times to become property.

OSINOSH YACHT CLTIN.—Annual cruise of our club will commence Wetnesday, May 28th, and a large turnout of the fleet is expected. The Commodore will have command. The rendoxons will be at Morley's Point, where we expect to meet the Fond du Lac fleet, and sail in company to Island Park, and there fail in with the Neonah squadron. After this a dully programme will be lived up to. The Maddine has been recently launched. A party of fresh water mariners got a cold lath, as they capsized their yacht in true lubtlers' fashion during a run across from the eastern shore, but all hands were fished out, Yachting here is very lively.

New Bedfold Yacht Club.—A new sloop has been built by Mr. F. C. Smith for his own use. Length, 32ft.; beam, 12ft.; hold fft.; draft, 4ft., 8in. of which is due to keel, besides which she is to have a 12ft. center-board. Two state-rooms and 15ft. house Mast, 35ft., deck to cap; topmast, 20ft., including 4ft. doublings boom, 30ft.; gaff, 32ft.; bowsprit outboard, 1ftt.; jib on foot, 22ft.

New Jersey Yacht Chin was organized 1871, and incorporated 1878. Club signal, a swallow tall, red held and white diamond in center; Commodore and Vice-Commodore, a blue and red anchor in the diamond. We are in receipt of the club book for 1880, a neal little pamphie repiete with information.

The Undine Yachting Club, of San Francisco, Cal., recently elected the following officers: President, Fred C. Farmer; Vice-President, Walter R. Eastman; Secretary, William Mitchell; Tressurer, Robert J. Coates; Captaln, Thomas Robinson; Licutenant, Charles Fuller; Board of Directors, W. R. Eastman, Harry Carlton and Horace Serie.

WARWICK YACHT CLUB.—The following officers have been elected; Andrew Robeson, of Fall River, Commodore; P. P. Sands, of Rewport, Vice-Commodore; Messrs. T. Parsons, Jr., Wm. R. Ballard, Albert F. Dow and Wm. B. Lovell were elected members. Rooms will be occupied in Fall River, overlooking wount Hope Bay.

Haverhill Yacht Club.—We are informed that the H. Y. C. is not responsible for the challenge cup race which has previously figured in our fixtures. It is a private enterprise.

Buffalo Vacht Club.—Official permission to build our elubouse inside the Government breakwater has just been received. The Fleating has been off on a two-days' cruise, and the rest of the fleet are all litting out.

New Sloops.—For goed substantial work commend us to the new sloop just finished by Samuel Ayers, of 744 Watter street, for Mr. R. K. McMurray and others of Staten Island. Her model was furnished by Mr. Steuler, and she will prove an able craft, for she is of good draft, full \$\frac{1}{2}\$! Attent is also a she will prove an able craft, for she is of good draft, full \$\frac{1}{2}\$! Attent is also a she will prove an able craft, for she is of good draft, full \$\frac{1}{2}\$! Attent is also a she will prove an able craft, for the intervent is a she was a she will prove an able craft would have exceeded \$ff. In body she is a trille full forward, but her run is long and clear on the section lines. The work on her is all of the most substantial kind, and a pleasing contrast to the glingerbroad constructions which have given our yachts the reputation for flimsy build. grooved. Planksheer, white oak, \$28in. Center-board, 16tt. long, trunk 2jin. thick, and 4ft. above frauses. Post of same are £3ini. oak. The inside is sheathed with 1802. composition. The board is 2jin. thick and 14ft. long, bolted with itin. galvanized Iron. House, 19ft. \$in. long, 2ft. 4in. high, of 2jin. white pine, the top of 1x3in. tongued and grooved pine, and covered with canvas. Ruader, 3ft. face, Well's sleering goar. All fittings of rnahogony. Skylights square, so that it can be turned either way and the sakes opened at warthships so as to catch the breeze when at anchor. Cabin has 7 to 8ft. floor_16ft. long; stateroom on starboard side with double berth, 7x8ft. On port side is the ice locx. w. e. and pantry, the water tank being placed over the forward half of the center-board trunk. Forecastle has two berths and galley. There is 6ft. sin. head room under the house. Spars. mast, 4ft. long with 4ft. doublings; dlameter at partners 12in. Bowsprit, 25ft. long, 10in. dlameter at stem. Boom, 45ft. lin. dlameter; gaif, 25 ft., 4in. diameter, topmas 3ftf. Now 3ftf. is something of a stick, but the owners take the right view of things. "when we want to topuast we have got one that amounts to something, when we don't want it, we house it or strike it altogether." The days of the scaly looking proomsticks aloft, copled from the oyster digger, are numbered, and it is gradually being understood that a yacht should be rigged differently from the smack. Mr. Ayers has turned out a strong, healthy job in the new £boks, and if other craft may surpass her in trimmings and trapping, none can beat her on sound, stanch work, and we would like to see more of the kind aftent. Blocks are supplied by the Providence Tool Co, who seem to be capturing the whole of the yackting trade with their patest ant-friction bearings. They are much to be preferred to the roller bouching arrangements, which give

LAINGHED.—Saturday last, from the yard of D. Young, Greenpoint, a new sloop, built for forourement Kortwright, N. Y. Y. C. from model by Philip Elsworth. Length on deck, 43ft; length on w. h., 43ft; beam. 17ft; depth, 64ft. She resembles the Elsphant in general type, and will be a flyer. Her internal accommodations are very roomy. A fine main cabin, 13ft, long, with 7ft. floor, is finished in mahogany and handsouncy decorated. Stateroom on starboard side; pantry, closets, lockers on port side. Two berths in forecastle and a Pacific No. 6 for galley, Round frames fore and aft, a good deal of drag, fore foot cut upoverhauging stern, and, 13ft. board without 64ft. drop. Will faths in the neighborhood of 11 tons inside iron ballast. Cubic contents according to official measurement, 2021t. Hoist, 40ft.; jib, 18ft. foot. She has been named Wizard. Also, the same day, from foot of Kont street, Greenpoint, a fine steam yealt for Mr. D. S. Hines, Brooklyn Y. C., built by Sam'l Pinc, before noticed. She is called Enu, will carry no rig and is Six1838, working pressure. Screw, 6ft. diam., 8ft. pitch. A smaller craft is also ready for launching. She is built for Mr. A. C. Wilson, of Greenpoint, and is 46ft. over all, 35ft. w. l, 8ft. din. beam and sit. in. deep: cylinder, 6in. diam. and 49in. stroke. Steel boiler 54ft. long, 4iin. diam, locomotive type. Screw 3ft. diam. and 5ft. pitch. Engines by Qumtard Iron Works.

A CHUNE TO THE SOUTH SEAS.—Dr. Samuel Merritt, of Oakland, Cal., will carry the San Francisco Yacht Club flag among the islands in the South Pacific this summer at the maithead of his fine schooner Carco. He expects to be gone some six months, and will take a small party of friends, among them some holdes. The Doctor's sister is of the party. The yacht is two years old, and last summer cruised south on the California coars some 500 miles as far south as San Diego, and then north to Fuget Sound. Washington Territory. She is a coppered keel schooner 96ft. long, with lead keel, and lead cast to fit between timbers low down inside. She is fitted to carry two topsuils, staysall, square-sail, flying jib and jib topsail or bailoon jib. Has a gaif and leg-of-mutton mainsail both, the latter for use on the windy California coast, where it has done good service. She will carry the gaff in running in the northeast trades. The Doctor modeled his own yacht and supervised her construction. It is interesting to note that she was sparred and caureased in accordance with the results of experiments made with a small model, built on a baif-inch scale from the working model. This little model was tested with the spars in different posicions. After thorough experiment, the large yacht was built and spars put on accordingly, rake, length, position, etc., agreeing with model. The Casco has proven a first-class sea boat, fast and handy. She steers as easily as possible, being well-belanced in every respect. She is very neatly fitted with all modern conveniences. The Doctor had the lumber selected and worked up at his own mills up the coast, and brought down in one of his vessels. Everything was of the best material. The yacht cost upwards of \$30,000. She will leave San Francisco about the 10th of May, and will proceed first to the Sandwich Islands, afterwards visiting the other groups.

A SAD RELAYER.—Only a week ago we were congratulating ourselves upon having convinced our only contemporary that deep yachts can sail quite as fast as the light draft fraternity, and now our good friend perpetrates the following about Mr. Prague's new sloop Fanita: "She is a deep center-board sloop, and therefore will not sail fast." Too back jurilet it go on record, and our estimate of the same vessel as well, and the future will decide. We unhesitatingly affirm that the Fanita can outsail anything of her length in America, because she is more than a shu; she is a boat with draft, weight, power, sail and very easy lines, any way you look at her. Last year's Elephant ought to have opened our esteemed contemporary's eyes to the troth of the assertions made in these columns—that a big-bodied boat, if properly modeled, will outsail the skinming dish any day, any weather, besides being intuitiely preferable as a cruiser. The Fanita is practically uncapsizable, which is a virtue fow American yachts can boast of, and though we should for rough water cruising prefer less beam more depth and lower ballast, our preferences do not blind us to the good points of other people's yachts. The Fanita has the room in her of most sloops twice her consage, and she will show the flat-trons what a deep boat can do. A 42t, sloop that can swing a 60t, spar to her good is so near perfection in the sloop jine that little more can be expected. And by this we are willing to stand or fail. At the end of the season our contemporary will be theroughly cured of flat-tron proclivities, and Elsworth will have gained hurrels by the cargo for not lighting shy of depth, in efference to the slipshod reasoning and accidental fashions of the unprocessional masses.

NEW STEAM YACITE.—The flush-deck from steamer, which the Ploneer Iron Works of Marcus Hook, Pa., are building for Mr. C. Taylor Dickson, of Plindelphia, will be a handsome craft. She is being built from the plans of Mr. Sam'l Holmes, 122 Front street, New York, who will also superint on the work. She is to be full schooner-rigard, with fair spread of canvas, compound tandem engines, with four ovilinders, in pairs, after the White Star pattern, and will have large power. The bunkers carry 40 tons, or enough for eight days fair steaming. She will have four

bulkheads, amplo quarters for crew forward, and aft there will be a main saloon 14x13ft., two staterooms and captain's roombath-room, etc., oncach stèle of the companion. There will be 36 lights a side. Length, 120ft.; beam, 15ft.; hold, 0ft.

CRUISING ABROAD.—It is becoming more and more the fashion. Clytle and Regina went foreign this spring. Mr. James Stillman leaves in the schooner Hemicter for the Chesspeake shortly. The schooner Resolute, chartered by Mr. Charles G. Franckiyn, will cruise in the Gulf of St. Lavrence; the Crase, of Sau Francisco, sails for the South Seas; the Vica for the North Pacific: and we hear of others on the berth for distant climes. Philadelphia partics have also ordered a zenuine flush deek seagoing steam yacht, 1203/E302, to be built at Marcus Hook. This, besides the other big steamers building, will form the nucleus of a seagoing itee whose ammittion lies beyond the muddy waters of the Sound.

THE LAYEST ENGLISH CUTTER.—They make them syrfully narrow. The rule of the Y. R. A. does it and nothing else. Here are the dimensions of the new 20-ton Freda, taken from Bell's Life: Length for tonnage, on w. l., 40ft; beam, 9ft, 9fm; draught of water, 9 ft. weight of lead keel, 17 tons 15 cvt; fonnage, 20 tons. Spars, mast, deck to hounds, 34ft; topmast, jib to sheavehole, 50ft; gaff, extreme length, 20ft; boom, 43ft; bowspift, outbourd, 23ft, 6in; gaff topsail yards, 40ft, and 20ft; pinnaker boom 9ft. Area of canvas in square feet: Mainsul 1,39ft; foresail 200ft, first jib 595 ft., second jib 330ft, big topsail 550 ft., second topsail 450ft

How Integer Sails.—From the World: "The schooner-yacht Intropid. N. Y. C., Mr. Lloyd Phenix, having completed her litting at the foot of Twenty-sixth street, went down the bay Saturday preparatory to sailing for Europe. All of her racing spars and canvas has been shipped per steamer, her owner's hytention being to race her in all the regattas to which she is eligible, and to accept any and all matches which may be offered birn. Unless it be the America, Ben Butler's yacht, the Intropid is the fastest keel-schooner to windward that has yet been built in titla country, and her career on the other side will be watched with interest."

The First Victim.—Light-draft sends hundreds to an untimely grave every year in America. Here is the first delided subject of the season: By the capsking of a "pleasure yach" at City Island, N. J., May 7th, Oliver J. Halsey was drowned, and four others narrowly escaped the same fate. Query, how much water did that maintrap draw?

NEW YACHT.—The new sloop building for Frank H. Ordner Buffalo Y. C., is now receiving her rig. She is 37ft. 3in, on deck, 12ft. 4in, beam, 4ft. 2in. deep, draws 3ft. aft and 20in, forward she has 2ft. 9in. deadrise to 6ft. floor; mast steps 11ft. from bow. She is to receive a racing rig and will be in all the hunts on Lake Eric.

ANOTHER COMPROMISE CUTTER.—We have seen the sail plan for Mr. Cassatt's new yacut, built by Alonzo Smith at Islip, and before 'noticed. She is to have 3ift. hoist; boom, 3ift. gant, 1str., for-stayasil, 1stt. on foot, and jib same; topmast, 2ift., fitted to house.

ENGISHL SAILS.—The Muriel is to have a genuine Lapthorn suit, imported expressly. The foot of her mainsail will not be laced to the boom, and the tack can be triced up by a line after the English fashion.

CALIFORNIA, TOO!—The yaw! Sappho has received a double head rig and a lofty housing topmast in San Francisco. and the Olympian remarks that more will follow

BLOCK ISLAND CABLE.—Yachtsmen in these waters will be glad to know that the Block Island cable is in working order.

The Mitrice.—This cutter has had her fore-foot and keel rounded up more, an Sin. mast substituted for the heavier one and stepped further aft. Some small portion of the lead on the keel aft has been shifted inside, and new joiner work inside. Her owner, in order to give his cuttern fair trial this year, has cargaged an English skipper and crew of two. The capitaln, Harlow, was at one time timoneer of the famous British schooner Egera, and was sent over by Mr. Harvey at the request of Mr. Stillnant op but the Murich through he English inshino. She now has a race on with Mr. Hitcheock's Volante—a match which will be watched with Reen linerest.

THE FROLIC.—Alonzo Smith has been overhauling this schooner for some time past at Philadelphia. She has received "all lead" ballast and a larger rig. Foremast, 46ft; mainmast, 46ft; main boom, 35ft; gaff, 20ft; fore boom, 15ft, and gaff, 1fft; bow-spit outboard, 15ft, 1fghg jibboom, 12ft; main topmast, 2fft, fore topmast, 2fft. This rig is none too large for her, and Evolte will show more speed. The trouble with her on that score is that she is too big a boat for her length.

The Wave.—This spart sloop (Dr. Barron) is coming out wit a stylish rig, in which are several commendable features. A very taunt topmast, of about 24rt. above the cap, fitted to house, of course. This is a big stick for a sloop 40ft. w. l., and the crew ought to be drilled into sending it up and down as easily as the burgee at the masthead. Hoist of mainsail, only 30ft; boom, 41ft., and a long gard, 57ft. This is a much better cut than the narrow-headed, 16fty abortions copied from the countrified rig of the smacks built up mud creeks. The lib is 30ft, or foot.

THE ROSALLE.—Albertson Brothers, of Kensington, Philadel, phia, well known as having built White Cap, Viren, Madeap and the steamer Elfin, have recently launched a sloop 53t, long, 1ftt, beam, 6ft, hold, similar in model to Bob Fish's 1amous Viren, for Measrs. George and Henry Corson, of Philadelphia. She will receive eight hundred yards of canvas.

GWENDOLEN-HECTOR.—Commodore Stone, East Boston Yacht Club, Is very anxious to try on the Gwendden with his smart sloop. As the latter has hardly bent sails, and is not in racing trim, the match is not likely to come to anything unless Mr. Lovejuy proposes taking a liberal risk.

THE IDA.—This little iron cutter, only 18ft. w. 1., belonging to Mr. C. J. Raxan, has received unew cubin and outfit at Roberts' shop, in Harlem. Her rigs to be full cutter, 1ft. hoist to main-sail, 15ft. boom, 10ft. head, fore staysail and jib, 8ft. on foot each.

THE MYSTIC.—Vice-Com. Norton, Atlantic Y. C., has bought the schooner Mystic from Mr. Hall. She will receive an overhaul at Plepgras' yard, Greenpoint, and possibly a larger rig. Capt. Baker, last year in the Actice, will do the skippering.

THE LILLIE.—This well-known sloop, lately of Lynu, Mass., has followed the fashion, and comes out with a keel. Hutchins & Pryor did the work. She is to have five tons of ballast and a snug rig for cruising.

THE INTREPID.—This schooner (Mr. Lloyd Phoenix) will shortly leave for foreign parts, and while in English waters may take on a match or two with some of our cousins' big ones.

Answers to Correspondents.

No notice taken of Anonymous Communications. SUBSCRIBER .- Observe the rule at the head of this column.

J. M. C., Jersey City .- We fail to find anything of the kind.

G. E. E., City.-Please send address, that we may write to you J. A., Yonkers, N. Y .- Ans. Dress the wound with ploked oakum and balsam of Peru.

"A FRIENDLY SERVICE."-Will the correspondent who inquir about this picture some time ago send his address to this office?

J. L., Boston, Mass .- Ans. Discontinue the sulphur and try the effect of quinine, two grains, three times a day. Do not feed but

S. M., New York.—Our choice would be the Scawanhaka or Atlantic Yacht Club. They are really the "sailing clubs" of

O. K. Chicago.-For rules of model vacht clubs write to Mr Max Wrigley, 19 Leffert's Place, Brooklyn, or to Mr. Charles G. Yale, 202 Sansome street, Sau Francisco.

J. S. D., Bethlehem.—1. For books on natural history see our issue of March IIth. 2. Ocean Grove is a camp-meeting ground. If that kind of summering suits you, Ocean Grove is the place.

H. J. P., Livingston, Mich.—Ans. One of the very common results of distemper. Likely to decrease if the animal continues in good health. Give plenty of exercise in the open air, and feed + 65 Cents.

T. T. P., Pearisburg, Va.—Ans. Had you examined the membranes of the brain and upper portion of the spinal cord, you probably would have found evidence of the existence of cerebrospinal meningitis.

DE C. S., New York.—What difference in shape, if any, is there in the tails of the manatce and the dugong? The books I have seen don't agree. Ans. There is no marked difference in the shape of the tails of the two genera.

C. A. D., Melrose, Mass .- I have Gordon setter pups nine days old, which have boils on their backs and sides. Ans. Give the dam small doses of sulphur for four or five days, and see that the skin of the puppies is kept clean.

C. M. S., North Dunbarton, N. H.—See the article in another column, sotting forth the attractions of Cape Cod as a sportsmen's resort. We know of several college professors who think that Cape Cod is the best place in America for a quiet and restful summer.

N. G., New Hampshife.—1. You may, perhaps, sell your eight volumes of the Forest and Stream by advertising them. 2. We know nothing of the firm. S. For pictures write to Anthony & Bros., Broadway, N. Y. 4. Buy a book on tactics and drill alone. 5. No match for the Palma this year.

F. S. F., Trenton.—You will find charts at Manning's Yacht Agency. The Sound is in three sheets, about 50c. each. Or obtain from same source the "Coast Pilot," price \$4, a magnificent Government publication, including charts and sailing directions from Boston to New York. Also published in sections,

SHELDRAKE, Vincentown, N. J.-I. Can pinnated grouse cept in confinement? 2. Will they breed in confinement? A. Yes; we have kept them, and they became as tame as hens. Audubon gives detailed account of their breeding in confinement Of course they should have as much liberty as possible, hear the results of your experience, if you get any birds.

hear the results of your experience, if you get any birds.

G. A., Philadelphia, Pa.—I. It is likely to disappe art in the main, although there may be some permanent inflammatory thickening of the tissues. 2. We should think not. 3. Exercise should be quite limited as long as there is any lameness. 4. We would recommend that a small quantity of compound iodine ointment, which can be obtained of any good druggist, be rubbed in daily, until some irritation of the skin results. It may be necessary to bandage the leg to prevent the dog from licking off the ointment.

ment.
R. L.—There is only one training ship in the United States Navy R.L.—There is only one training ship in the United States Navy at present, the steam frigate Minnesola, now in Now London, we believe, but cruising in summer. On her, boys are trained for the navy only. The old sloop-of-war St. Marys is supported as a general nautical school for worthy lads by the State of New York, and has just lefton an extended cruise. Both vessels train the boys for borths "before the mast," and they must rely upon their soys for bottes "before the mast," and they must rely upon their own wits to climb into the cabin window or into a warrant officer's uniform, if in the navy. For rules of admission apply to the Army and Navy Journal, 240 Broadway. The St. Marys is officered by the regular line officers detailed by the Navy Department. There is an excellent chance for similar vessels in every scaport of the Union, if the people were only alive to their own

MISTAKES AND PREJUDICES OF RELIGIOUS AND TEMPER-ANCE JOURNALS,

RELIGIOUS AND TEMPER
ANCE JOURNALS,

Some good Religious and Temperance journals are making the mistake of declining to advertise a most valuable anti-incortening, medicine, as most valuable anti-incortening, medicine, as the property of

What the Religious Press Says

What the Religious Press Says.

Hop Bitters Mg. Co., Rochester, N. Y.:

Gentlemen-We do not allow anything in the
Gentlemen-We do not allow anything in the
says and the says and the says and the says are free from that ingredient. We feel responsible for the good or bad that may be done to the
our advertisements. Therefore our discrimination in your favor, and we trust that our very
low rates will meet your approval and that we
may hear from you.

"The Living Church."

Temperance clergymen, lawyers, ladies doctors use Hop Bitters, as they do not intente, but restore brain and nerve waste.—!
portance Times, Brockport, N. Y.

Not a Beverage.

"They are not a beverage, but a medicine, with curative properties of the highest degree, containing no poisonous drugs. They do not tear down an aiready debilitated system, but build it up., One bottle contains more host, that is, more real hop strength, than a harrel of ordinary beer. Both of the beautiful than a harry bear than the beautiful than a horized of the beautiful than a horized of the beautiful than a horized of the beautiful than a horized of the beautiful than a

Wo are not in the habit of making editorial mention of patent medicines, but in case of Hop litters, feel free to do 80, because their merits deserve to be known.—New York Independent Northern Christian Advocate, Syracuse, N. Y. Evangelical Messenger, Cleveland, Ohio. National Baptist, Philadelphia, Pa. Pilot, Boston, Mass. Cinclanati, Ohio. Home Journal, Detroit, Mich. Methodist Protestant, Baltimore, Md. Southwestern Christian Advocate, New Orleans, I.a. Mirror, Portland, Me. And over five hundred more Religious and Temperance papers.

Pittsford, Mass., Sept. 28th, 1878.

— River I have taken Hop Bitters and recommend them to others, as I found them very beneficial.

— Miss. J. W. Tullier, Sec'y Women's Christian Temperance Union.

A MEDICINE, NOT A DRINK.

High Anthority.

Hop Bitters is not, in any sense, an alcoholic beverage or liquor, and could not be sold, for use, except to persons destrous of obtaining medicinal bitters.

U. S. Con'r Internal Rev.

D. S. COM FARGEMENT.

Bear Sir :—Why fron 1 you get a certificate from Col. Why fron 1 you get a certificate from Col. Why fron 1 you get a certificate from Col. Why from 1 you get a certificate flow bic cured himself of drunkenness by the help of Hop Butters. His is a wonderful case. He is woll known in Rochester, N. Y., by all the drunking people there. He is known in this cit; Clickman New Ortensa, New you have the first command the command of the collars for run. I honestly believe his card would be worth thousands of dollars to you in this city and Islatimore alone, and make thousands of sober men by inducing the use of your Bitters.

Prejudice Kills.

"Eleven years our daughter suffered on a bed of misery under the care of several of the best physicians, who gave her discusses from the best physicians, who gave her discusses from to take it good health by Hop Bitters, that we had poohed at two years before using it. We earnestly hope and pray that no one clse will let their sick suffer as we did, on account of prejudice against so good a medicine as Hop Bitters."—The Parents—Good Tenplare.

Milton, Del., Feb. 10th, 1880, for debility, nervousness, indigestion, etc., I excellent medicine, and recommend it to any one as a truly tonic bitter. Respectfully, Rev. Mis. J. II. ELLGOOD.

I declined to insert your advertisement of Hop Bitters last year, because I then thought they might not be promotive of the cause of Tempor-ance, but find they are, and a vory valuable medicine, myself and with baving been greatly benefitted by them, and I take great pleasure in making them known. JOHN SEAMAN, Editor Home Sentinel, Afton, N. Y.

The "SPANDARD TARGER,"—For Rifle Practice.

Size 6 inches. Rulls-eye 11 inches. Runge, 100 feet of inches. The zones rise by great instead of diameter.

The zones rise by great instead of diameter.

Marksmen will appreciate the new departure which this target has inaugurated. The accurate, which this target has inaugurated. The accurate, while on old-style largets the record was so tainted by the clement of chance as to give but a vague dean of the smooter's skill. For instance, on a 200 yard Creedmoor "conter," seconing 4 rifleman knows that no degree of skill or care will give immunity from occasional misses, and under the old system it was almost the rule for good will be used to the smooter's skill or care will give immunity from occasional misses, and under the old system it was almost the rule for good will be used to be supported to the properties, and under the old system it was almost the rule for goods to the board center, blunder one shot into the edge should go for Jons," would senter his strays all over the board center, blunder one shot into the edge should be allowed the board center, all shot through the should be allowed the board center, but have struck down cight, all shot through the center of the should be considered they should have struck down cight, all shot through the center in no was impaired if thou, should have struck down cight, all shot through the bear in no was impaired if thou, should have struck down cight, all shot through the bear in no was impaired if they should have struck down cight, all shot through the bear in no was impaired if they should have struck of the should be eliminated.

Arrangements have been made for supplying Amov an easy matter to gauge relative stell by uniform practice, and to communicate definition of chances should be eliminated.

Arrangements have been made for supplying a mow an easy matter to gauge relative stell by uniform practice, and to communicate definition mow and can be a supplying them by explanatory details. The targets are mulied, post-

CHICAGO LAWYERS IN THE BRITISH WILDERNESS

No. II.

E are becoming sated with trout fishing. When we can capture a three or four-pound trout as surely as a boy can take a six-ounce perch from the Govern ment Breakwater, and quietly drop back into the water 6sh which would constitute the piece de résistance on the choicest table in Chicago, we plan greater variety for our sport. Bonfield and myself did not give up the sport until Tuesday afternoon, fishing from a point of rocks just below the camp, in the edge of the whirl of water from the rapids opposite. Standing on the farth est rock, we could easily see the trout in six or eight feet of water in front of us, and, after the first few had been caught, we established the rule that the one who stood on the point should, as soon as he struck a fish, tow it up into the stiller water, and give the place on the point to the other, who, in turn, stepped back when he had hooked his fish, Each used the landing net for the other's fish, and thus the fun proceeded in regular rotation. Occasionally both would have a fish at the same which made some confusion. They ordinarily weighed from two to three pounds, a few overrunning the latter figure, and some falling below the former. As we already had in camp all the fish we could eat, we handled each new captive gently, carefully weighed him, and dropped him quietly into the water again, watching him strike out for the lowest rocks. But these trout did not seem to understand their favored position; that they were not to be thrown in a heap on the shore, nor handed over to the ravenous Indian, but were being caught strictly in the interest of science, that we might obtain the fair average weight of the fish in this stream. Several times I attempted to explain to some poor, deluded trout, who was struggling manfully with adversity at the end of a line, that we meant him no harm, and if he would come up quietly and like a gentlemen, and be weighed, he would be allowed forthwith to depart in But these explanations never seemed to give satisfaction, and the game creatures fought for liberty as determinedly as though fearing their destination was the frying-pan. Like the victims in De Quincy's "Murder Considered as One of the Fine Arts," they really had the temerity to object to their proposed fate,

TROUT CORRALS,

We have things better arranged now. We have established three corrals; one at the camp, and one on each of the fishing points below. By moving a few rocks at the edge of the water, and building a semi-circular breakwater outside, we have a pond several feet in diameter, and twelve or fifteen inches deep, through which the cold river water runs as fresh and pure as in the main current; and there our happy family lie as quietly and peacefully as their ardent natures will permit. We have about thirty domiciled now; and unless some party should come by who we are short of trout, and will promise to use and not waste them, we shall, on breaking camp, open the rocky barriers, and enjoy the sight of the vanishing tails taking an unceremonious departure. The Indians take turns with us in going down to the camp corral to watch and play with these temporary captives. Some of these are already quite tame, and make no objection to being quietly stroked and petted, though at any sudden motion the whole party unite in making the water boil with their frantic struggles, while the surface is cut with their high dorsal fins. We are all becoming adepts in the science of

are all becoming adepts in the science of

FISH PATHOLOGY,
for when one of them is so unfortunate as to be caught
at a considerable distance from the corral, he does not
seem to relish the necessary aerial transportation, and on
his arrival does not immediately display his customary
high spirits. The science of pathology requires that he
should then be gently held by the hand in his natural
position, or with his mouth toward the entering stream
of water. If he does not then appear to revive rapidly
enough, a fow mild shakes in the vater will assist him,
and, unless he is like Cassio, "past all surgery," he will
begin to show his appreciation of your efforts by the
movements of his mouth and fins. Last evening High
and Pratt brought in five handsome fish in a commotose
condition, all of which lay on their sides without making
any more of an effort than could have been expected of
the late respected Mrs. Dombey. The proper manipulation, however, began to have its effect at once; as soon
as they were turned upright, they began to move, and in
a few moments all but one were swimming about
handsomely. That one, a four-pounder, seemed almost
human in his desire for life. After having been once
placed with his back up, he used every endeavor to remain so, and, whenever he fell over on to his side, ho
would look up and turn his head toward me in a sort of
mute appeal to be righted; and when assisted, he held
his own as long as possible; and on feeling himself sinkling again on to his side, he would make a desperate
effort to regain his true fishy position. And so all the
evening he hovered between life and death. But his
wound proved like Mercutio's, and in the morning we

ing again on to his side, he would make a desperate effort to regain his true fishy position. And so all the evening he hovered between life and death. But his wound proved like Mercutio's, and in the morning we found him lying like Bed Murdock, "stark and stiff."

We have learned also to individualize the trout, and so recognize them accordingly. They are as different as the sheep in a flock, every one of whom the shepherd can distinguish. One has a long, sleader head; another, a peculiar coloring to the fins; a third has his dorsal fin tipped with white; a fourth, a peculiarly brilliant red belly; a fifth, the markings on his back so clear and tine that they seen almost one continuous color; and a sixth, though small, has zizgag stripes broader than others of three times his weight.

LANDING TROUT.

If I were to say that these trout were game I would be saying simply what every one knows to be true of all trout. The correct statement is that these slow more vigor and determination after a few moments than when first hooked. The acquaintance with an eight-ounce rod seems to develop a wonderful amount of latent energy, and I have had a three-pounder make a run of over fifty feet after playing him for half an hour, and then repeat the same process a few moments later. The smaller trout on the Brule and many other streams not only jump clean out of water in striking the fly, but afterwards do the same and shate themselves in the air after the manner of black bass, in hope to get the hook out of their mouths. These larger fish, however, seldom rise clear of the water in striking, and the heavier once frequently do not show a single flu; and as they choose the rougher water the first evidence of his size is the rapid running of the line from the reel, and the further proof is the persistence with which he strikes to the bottom and refuses to display his proportions. In the pool at the foot of the Falls yesterday one good fish threw himself clean out of water six times, each time shaking himself in mid-air vigorously, but in vair, but as a rule not one fish in ten will come near the surface for a light rod until really tired. For an Indian's rod, however, the case is different. As we were having some fine sport a few miles below, one of our Indians scened anxious to participate, and fastening about ten feet of stout line to the end of a setting pole he baited with a piece of bacon, and at the first bite a three-pound with a nice of the contains a case of the stream of the stream of the stream of the stream of the rect of stout line to the end of a setting pole he baited with a nice of the contains a case of the contains a case of the contains a case of the contains a case of the contains and the contains a case of the contains a case of the contains and the contains a case of the contains a case of the contains a If I were to say that these trout were game I would dians seemed anxious to participate, and instening about ten feet of stout line to the end of a setting pole he baited with a piece of bacon, and at the first bite a three-pound trout went sailing through the air in a manner as laugh-able to us as it must have been surprising to the trout. Lest some doubting Thomas, accustomed to the little hooks and diminutive trout of the Alleghanies, may sus-

pect that these three, four and five pounders belong to some different species and are not the genuine brook trout, I will add that it is a well-established and undoubted fact among all experienced men familiar with these Nepigon fish, that they are precisely the same as the trout of New England and the Adirondacks—the genuine Salvelinus fontinalis of the naturalist.

LAKE NEPIGON.

Yesterday we organized an expedition to Lake Nepigon, which lies beyon a the domain of whoever does not chance to have the eye of the tourist or the artist. The fisherman's paradise ends at these Victoria Falla. A fairer paradise lies beyond, and a touch of its beauty seemed even to fall upon the unromantic Indian. Bonfield, King and myself, in our character of excursionists, bid farewell to High and Pratt, who had assumed the literary character—so far at least as one of Trollope's novels and a magazine would admit—and started northward. If these Falls are to be considered as the gateways of the paradise on either side, they are deserving of mention as such, and also for their intrinsic beauty. The broad expanse of Lake Nepigon is suddenly contracted through a wedge of islands and shot over a ledge of rocks between two points not two hundred feet apart. The dark purple cast, which I don't remember to have seen in other waters, forms a striking contracts with the dazzling silver whiteness of the not two hundred feet apart. The dark purple cast, which I do not romember to have seen in other waters, forms a striking contrast with the dazzling silver whiteness of the spray into which all seems to be converted, and one everopening, ever-closing gulf of foam seems yawning for more water to grind upon its lowest rocks and throw up in silver drops for the rainbow, which spans the horizon above the seetling torrent. Below all is turnoil; aboveal is peace. Below the fierce current boils and rages through the narrow channel and around the wide rock-bound pool, from whanhel and around the wide rock-bound pool, from which it escapes only to form two lesser uppids just below. Above are islands, widening shores, the unruffled surface of the lake and perfect solitude. For two miles our canoe glided between islands, gradually opening wider views and revealing more distant capes and peaks, until on rounding a little point the fair lake officing and the standard of the seems. Right in the center of our line of furthest view rose an island ship. Her solitary pine tree stood as the towering mainmast, with sails spread to the breeze. Two smaller birches furnished other masts, yards and sails, while the bare body of the rock rose just high enough to complete a well-proportioned vessel. Nature could furnish no better one, and man has not yet built upon these waters any other to dispute her supremency.

loned vessel. Nature could furnish no better one, and man has not yet built upon these waters any other to dispute her supremacy.

After the first burst of enthusiasm we lay enchanted with the scene. Before us the open lake; to our right the main land, gradually receding and rising to the height of several hundred feet. The forest was thick, but the trees small, as natural in this high latitude. But upon one range of hills, at least five miles away, one great tree rose majestic against the sky, as though to re-assert the dignity of richer soil and more southern climes. At our left island succeeded island, until in the distance they seemed a mainkand, though our guides told us that the furthest land we could see was island still.

Slowly we paddled out to our desert island ship. It was rock-formed, rock-anchored and rock-encircled, as though to laugh to scorn a thousand Atlantic storms; and three massive stones showed that her prow was pointed toward the north to meet and brave the roughest winds sweeping from the Pole. The rock ship was all massive trap, and the treasure which she seemed to bear was one great granite boulder, worn round and smooth ages ago in its perilous journey with the icebergs, perhaps, down from the Arctic zone, and now rejoicing in its haven of refuge on the safest spot on this rock-ribbed island.

Our Indians at once turned their attention to a pair of loons swimming opposite another island half a mile to our right, and borrowing Bonfield's gun one of them hid behind the rocks at the point, and the other commenced calling then up by imitating their well-known cry. The loons answered and commenced swimming toward us, and in ten minutes were within a hundred yards of the gunner; but they wisely declined to come nearer and cory.

VIEW OF THE LAKE.

To the right of the entrance to the lake rose a sugar-loaf hill, evidently commanding a good view of the surrounding country. From a series of observations we convinced ourselves that it was less then a mile from the water, while on the lake side it displayed a rocky bluff, which told us that in ascending it we should not be treated as other ambitious tourists have been who have climbed high hills only to find them so thickly wooded on summit as well as side, as to furnish no point for a view. Drawing up the cance on a gravelly beach—a rare thing here — we started inward and upward sometimes through rough woods and tangled underbush, sometimes through rough woods and tangled underbush, sometimes sinking ankle deep in the yielding moss.

The first view over the lake was exultant enthusiasm; the second was rapturous admiration. Our party gathered To the right of the entrance to the lake rose a sugar-

on the topmost cliff and gazed in unbounded wonder and delight. We stood probably six hundred feet above the water and in the clear atmosphere overlooked the whole lower end of the lake; the islands which had been united to our eyes before, now stood each in its separate setting the core in the first probable of the core in the core in the first probable. to our eyes before, now stood each in its separate setting of water, blue and beautiful as the ocean itself. The seventeen which lay at our feet were grouped in perfect harmony, and though many new ones had arisen in the west, beyond which there seemed to be a ridge of hills making the shores, our guide William, brought up on the lake, still told us that these were other islands and that the lake extended far beyond. In some places the water, sheltered from the lightest breeze, reflected the island shores as from a mirror of burnished steel, and carried the clouds suspended in its light depths, and slowly moving in glorious procession. In others we saw, as it were, a lake of ice, frozen in some places clear as crystal, in others with a waving rippling appearance as though the feeking had surprised a summer breeze upon its surface; and again there were those broken lines and narrow angular crevices peculiar to a sheet of ice newly to our eyes before, now stood each in its sep of water, blue and beautiful as the ocean surface; and again there were those broken lines and narrow augular crevices peculiar to a sheet of ice newly broken in the upheaving spring, and shining lines of water at the cracks. To the north the noble lake still refused to disclose to our scurching gaze any boundary save the sky to her horizon. To the south stretched the nubroken wildenress, except at a single point where the river stole out from behind a range of hills, soon losing herself again in the forest. The sky was worthy of Italy, with the add d inspiration of its northern character. To add to the impressiveness of the scene, we knew that every shore washed by these waters was still as designed by nature; that no woodman's axo has ever resounded in those forests; that no steam whistle had ever broken by nature; that no woodmans axo has ever resonated in these foreats; that no steam whistle had ever broken their solitude; that no path leads through them, except the trail of the Hudson Bay Company and the Indian; that no keel has ever plowed through these waters; and no sail held by a white man has ever been unfurled upon their waves. Finding on our standing place no evidence of previous visitations, King suggested that it should be named; and as the ascent, which to us had been a pleasure. of previous visitations, King suggested that it should be named; and as the ascent, which to us had been a pleasure, was to his ankle a constant tornent, his heroic endurance and boundless endusiasm critical him to the honor. So "King's Penk" it was named, and one of Bonfield's empty cartridges in the center of a mound of stones contains the record of its christening. Each of the party standing with a boulder at his feet, a the edge of the rock, rolled it over the cilif, at the signal given, after the manner of the Titans of old on Mount Othrys, and all gave three cheers for the place. Then, as master of ecremonics, Icommanded that silence should be observed until the last echoes had died away, and fired a salvo of Bonfield's artillery toward the north. Each island took up the sound, and every shore repeated the reverberation, until rolling along the shore of the Nepigon it died away in the distance.

Since sighting 'Thunder' Cape, towering tangestically nearly 1,400 feet of solid rock above Lake Superior we have been constantly reminded of the rough volcanic origin which geology ascribes to these regions, and so long as we remained on the lake, the islands, however wooded, showed along every shore a narrow strip of trap, the armament of the forest against the waves when lashed by the storm. But gazing from this peak the fringe of rocks had apparently withdrawn into the forest or sunk beneath the quiet water, and all was harmony, confidence and neere. In the wholes in the forest confidence of the rough our vision.

lashed by the storm. But gazing from this peak the fringe of rocks had apparently withdrawn into the forest or sunk beneath the quiet water, and all was harmony, confidence and peace. In the whole circuit of our vision there was not a broken outline or a rough shore, save at one island headland far in the distance, which rose boldly from the water, and showed a part of its side rough and bare as though unwilling that the rigors of this latitude should be wholly forgotton even under the bewitching influences of a perfect summer's day. One essential part of the ceremony was lacking still. Blue flannel having usurped so large a place in our apparel we could not produce the white flag which should be planted, as a memorial, on the spot, and it would be prestunption in foreigners to plant a colored flag within Her Majesty's Dominions; so we were preparing sadly to return, when a movement of one of our guides attracted our attention, and William having, in this moment of inspiration, torn out part of the lining of his coat, and Baptiste producing a pole, we planted the appropriate flag on the peak, and departed. And, though I should travel as widely over other continents as over our own. I never expect to gaze upon another scene which with more artently call upon the sentiment of love to the basic field. I should travel as widely over other continents as over our own. I never expect to gaze upon another scene which will more ardently call upon the sentiment of love for the beautiful, than this day vision of looking northward over the pure waters of the Nepigon, untouched by commerce and undisturbed by man.

JOSIAH H. BISSELL, Victoria Falls, Head of Nepigon River, Aug. 28th, 18702.

THE ROUTE TO GRAND FALLS.

THE ROUTE TO GRAND FALLS.

HALFAX, Nova Scotia. May 13th, very excellent letter in FOREST AND STREAM for May 6th, which I eagerly read. I beg to offer a few supplementary repearls about what he has probably inadvertently omitted. I want over the route planned by him in the autumn of '77, and would suggest to those who intend taking his good advice to leave their visit until late in September or early in October, when the scenery on the St. John River is at its best. Beyond doubt the most desirable route at that season from St. John River is at its best. Beyond doubt the most desirable route at that season from St. John River is at its best. Beyond doubt the most desirable route at that season from St. John River is at its best. Beyond doubt the most desirable route at that season from St. John River is at its best. Beyond doubt the most applied to the steamer takes the greater part of a day to work against the current, while the train takes only a few hours; but then one is amply ahead on other scores by taking the boat, as the fare is only \$1; and the scenery, as all the New Brunswickers put it, "beats anything anywhere." It is truly grand just after the early frosts have brought the hardwood trees to their most beautiful lints. From the top of the steamer one can see far up the different tributaries of the St. John, which sets him wondering whence comes all the water.

The beautiful little settlements are the gems of the scenery as the steamer shortens the eighty-four miles to Fredericton. No time is lost in exchanging freights with the smaller stations; a skillfully managed boat comes alongside, while the steamer keeps on her course; a small laidler is let down on either side by which passengers, etc., are transferred and they part. I wondered how those poor little villages struggled under the unpronounceable Indian names that I saw printed on the mail.

bags; but the syllables harmonize so nicely that after having heard them called out I thought pronunciation the eastest part of them.

If the traveler is not a very enthusiastic sportsman he can enjoy some good grouse shooting in the immediate vicinity of Fredericton. To be sure "Salmo Fontinalis" must have noticed the quaint old terry boats between Fredericton and the Nashwank. I imagine they are after the style of the very ancient New Yorkers; they am well ashore at one end and have a pole stuck in the mult to oppose the current at the other. From this up your correspondent's description is better than anything I could attempt. My visit was slightly varied by driving about fifteen miles in consequence of the railway being unfinished; otherwise I enjoyed all the pleasures which he has experienced.

Matural History.

Address all communications to "Forest and Stream Publishing Company, New York,"

SPRING NOTES FROM MINNEAPOLIS, MINN.

April, 1880.

April 1st.-32°, 48°, 41°. Melted but little during the day. New arrivals noted were killdeer plovers, loggerhead shrike, herring gull, golden-winged woodpeckers and a Wilson snipe. Found first the shore lark's (Eremophila alpestris) nest to-day. It was on a sandy ridge in the prairie ,and contained four eggs, which were fresh. It must have been built about March 26th or 27th, immediately upon the disappearance of the snow of the 25th. Many ducks flying.

April 2d. -33°, 48°, 37°. Saw a sharp-shinned hawk and striped spermophile (Spermophilus tridecem lineatus). The "gopher" had just opened his hole, and was airing himself at the entrance after his long winter sleep. Song sparrows have become numerous. Some poplar and willow catkins are bursting their covering.

April 3d,—36°, 51°, 40°. Rusty blackbirds. Gadwall ducks. Asmall flock of Northern waxwings (A. garrulus) has been about the yard all day, the attraction being a quantity of rotten apples that I placed as a bait for them. They are very fond of this kind of food, and will regularly frequent a place where it is to be obtained. The flock would alight on the ground, and feed eagerly and rapidly, until each bird was full, fairly to the mouth, when they would ascend by easy stages to the top of an oak tree standing close by. Here a brief period was spent in cleaning and arranging their plumage, and in quiet repose, while the food they had eaten digested with astonishing rapidity. Soon they would begin to bestir themselves again, and drop one by one onto the ground to again gorge themselves, and then re-ascend to the tree-top as before. This was continued all day with but little interruption. A shot or any sudden noise would scare them off only for a short time, when they would return apparently as hungry as ever. The soft, unsubstantial character of the food, and consequent rapid digestion, is probably the explanation of the gluttony displayed, though the waxwings are in general very hearty eaters, let the food be what it may. An attempt at feeding them on orange failed; they would not touch it.

April 4th,-340, 450, 340. A cold, windy day. second shore lark's nest, containing three eggs slightly incubated. Contrary to the usual custom, the female in this instance showed much anxiety for the safety of her nest, keeping close at hand and going into the nest whenever opportunity offered. The coldness of the day may have had some influence. The waxwings remained about until they had caten all the apples.

April 5th.—31°, 40°. A cold day, with light flurries of snow. Visited a small lake near the city in which the fish have died from some cause unknown. Hundreds upon hundreds of dead fish of eight species, together with many frogs, lay all around the shore or floated in the water. Some of them were of large size : pickerel three feet long, black bass eighteen inches in length, and suckers two feet or more. They had been dead some time, as was evident from their appearance; but as they were in various stages of decomposition it was evident they did not all die at the same time. The lake is of small dimensions, lies in a meadow, and is rather shallow around the edges, but deepens abruptly and is said to be forty feet deep in the middle. It is fed by springs, and has a small outlet, which, however, is often dry of late years. The water is always clear as crystal, and stagna tion can hardly be advanced as an explanation. Whatever the cause, it must have been something very vital to kill not only all the fish indiscriminately, but even frogs and turtles. The dead fish consisted of the following species, named about in the order of their abundance Sunfish (Eupomotis aureus), common sucker (Catostomus Commersunii), yellow perch, golden shiner (Notemigonus chrysoleucus), black bass (M. pallidus), catfish (Amiurus vulgaris), pickerel (E. lucius), and dogfish (A. calva). If anyone who may read this can, from such brief data, offer any explanation of such wholesale destruction of the inhabitants of a lake, it will be received with interest by many persons here.

eighteen evening grosbeaks on Nicollet Island, a locality near the heart of the city where these birds are accus-tomed to appear. These are the first that I have seen this winter, though several were reported at different times during March.

April 8th,—28°, 51°, 42°. A winter wren, a bittern and two loons. Heard the frogs croaking for the first time. Fox-colored sparrows have become numerous.

April 9th, -48°, 74, 55°. Alder (Alnus incana) in bloom and pollen ripe. Some slight signs of starting vegetation in the woods, but the ground, in most places, still frozen hard.

April 10th .- 320, 420, 310. A purple martin. Ice about all out of the larger lakes.

April 11th,-32°, 45°, 83°. Soft maples in bloom. Spent some time watching evening grosbeaks on Nicollet Island. Their principal food at present is the last year's seed of the sugar maple. The island is timbered in part with maple trees, and on the ground are quantities of the keys, which are now swelling and beginning to sprout. These the grosbeaks seek for, and, taking out the kernel, remove the dry, brown covering, and have a fresh green morsel, which they seem greatly to relish. They are also very fond of the keys of the box-elder, and during winter, when the snow is on the ground, make this a regular article of diet, for as the seeds remain hanging on the trees in bunches, they are easily obtained. With the sharp, overlapping edges of their powerful beak they clip the dry keys in two as neatly as it could be done with a pair of scissors, and then with the same instrument, clumsy looking as it is, manipulate the parts and remove the small, slender kernel.

April 12th.—40°, 70°, 51°.—The first yellow-rump war-bler and a grass finch. Saw the Bohemian waxwings. A trumpeter swan was shot to-day on the Minnesota River, about ten miles from Minneapolis, by Mr. G. Van Ess

The first pasque flowers (Anomone patens, var. Nuttaliana) in blossom.

April 13th.—53°, 74°, 43°. Several martins.

April 14th.—54°, 64°, 31°. Wind blew very heavy all day, hot and exhausting in the morning, the thermometer reaching 77°; then turned cooler, and by evening was freezing. Red-headed duck shot. Saw many yellowrumps, ruby-crowned wrens, white-bellied swallows and the evening grosbeaks and Bohemian waxwings on Nicollet Island. (The waxwings left us about this date, as April 15th.—28°, 50°, 38°.

April 16th.—38°, 60°, 45°.

April 17th.—48°, 68°, 52°.

April 18th.—46°, 72°, 64°. April 19th.—33°, 38°, 37°. April 20th.—40°, 60°, 48°. Snow.

Ground white with snow that fell last night. Two unfinished loggerhead shrikes' nests. Meadow larks paired. Early crowfoot (Ranun-

nests. Meadow lates produced in bloom.

culus rhomboidens) in bloom.

K10 78°, 45°, White-throated sparrows. A phobe bird's nest containing one egg. Bank swallows in great numbers excavating their holes. A small flock of Lapland longspurs. Liver-leaf (Hepatica acutiloba), bloodroot (Sanguinaria Canadensis) and Isopyrum bi. ternatum in bloom. Ground plum (Astralagus caryocarnus) in bud.

April 22d.—42°, 60°, 489. April 23d.—44°, 52°, 47°.

April 24th.—36°, 45°, 43°. Large number of Wilson's

April 25th.—42°, 50°, 39°. Bonaparte's gulls. A crow blackbird building its nest behind a water pipe under the eaves of a house located in the central part of the city. Two bluejays' nests, one with one egg. English sparrow nesting about City Hall. These sparrows are increasing quite rapidly here, and will without doubt become a great nuisance before many years.

April 26th. -39°, 45°, 42°, Geums triflorum and Antennaria plantaginifolia in bloom.

April 27th.—41°, 64°, 50°. Brown thrushes. April 29th.—50°, 54°, 44°. A chipping sparrow. A golden-winged woodpecker nesting. A bluejay's nest containing three eggs.

Dutchman's breeches (Dicentra Cucullaria) and smallflowered crowfoot (Rununculus abortivus) in bloom. Dog's-tooth violet (Erythronium albidum) in a very favor-

able spot nearly in bloom.

April 29th.—39°, 51°, 41°. A few flakes of snow in the afternoon. Box elders and cotton-woods in full bloom.

April 30th.—40°, 60°, 52°. Ice nearly a fourth of an inch thick formed last night. Black-throated green warbler, yellow red-poll warblers and yellow-headed black-THOS. S. ROBERTS. birds noted.

sunfish (Eupomotis aureus), common sucker (Catostomus County, Virginia, May 12th.—"W. P. M.," of Boston, Mass., in your issue of 6th instant, supposes that the surgarish, pickered (E. tucius), and dogish (A. catva). If who may read this can, from such brief data, offer any explanation of such wholesale destruction of the inhabitants of a lake, it will be received with interest by many persons here.

April 6th.—31°, 28°, 37°.

April 6th.—34°, 40°, 27°, Saw a flock of fifteen or

When I was a lad in Virginia thousands of bats used to When I was a lad in Virginia thousands of bats used to make the roof and upper room, or "debtor's prison," their roosting places, and the prisoners were fairly covered with chinches. I have observed in Texas that the leather-wing hat frequently hung in shady forests upon trees in long festoons, and also upon fences which were sequestered. When this is the ease the bedbug will ever be found under the bark, and in the interstices of both trees and rails. In 1867 the writer built him a residence, and the leather-wings took possession before he did. Bats roosted in one or two of the rooms, and when the house was occupied by the writer and his family, there was unceasing warfare upon the rest-breakers for nearly two years before we were the victors. "W, P, M."may rest assured that the "barn." "basswood forests." "a house was occupied by the name of the parameters for nearly two years before we were the victors. "W. P. M." may rest assured that the "barn," "basswood forests," na house," etc., of which he writes, were first infested by being the resort of the leather-wing bats. I reason this way. It is well known that buts are ever covered with these pests, and, so far as I know, swallows are not; therefore, it is reasonable to infer, the places where the swallows made their home had been the dwelling place of the bat. It seems to me just possible that the bats got the chinches from dwellings, to which they are at once attracted by lights, and then they breed upon them, and feed to their heart's content, so far as I know, numolested upon the countless numbers which flock together.

R. M. CONWAY.

WHEN BEARS BRING FORTIL—Nashville, May 12th.—For some time passed I have noticed a number of articles in the FOREST AND STREAM upon the subject as to what season of the year bears give birth to their young. Perhaps one or two facts on the subject may throw the desired light. Five or six years ago Viscount Parker returned to New York from Florida during the month of May; he brought with him a cub which could not have been more than two months old. This would fix March as the mouth he was born in, but in Mississippi the fall of the year is when cubs are commonly offored for sale; and the first bear I ever killed was one I should judge was about six months old, that had been captured by my father's huntsman, but was found too old to tame. He broke the chain by which he had been attached, and finding it impossible to induce him to descend from a high tree in our yard, which he had climbed, it was declided that I should have the honor of shooting him. My impression is that there is no regular month for their bringing forth in our Southern country. It was in November when the above occurred.

J. D. H.

ARRIVALS AT THE PHILADELPHIA ZOULOGICAL GARDEN FOR THE WEEK ENDING MAY BELL-Helmin soulde Ophtholis dollation triumquiss, 2 king snakes (Ophtholis golulus), 1 brown thrush (Turdus rules, 2 borned lizards (P. cerulum), 1 alligator (Alligator Intests), 1 snapper terrapin (Chelyedra serpentina). All presented. 2 Gillespie's hair scals (Zalophus Gillespie), 1 Rocky Mountain sheep (Ovis Montana), 4 howling monkeys (Muretes pal-Balus, I black-banded spider-monkey (Ateles melanochir). All purchased. 1 Virginia deer (Cerrus virginianus) and I Llams (Lama peruana). Born in the garden.

[From a Staff Correspondent.]

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

No. III .- FISHING TACKLE.

THE show of fine tackle used in angling is confined entirely to three countries-Germany, England and the United States-the others neither making nor using it to any great extent. In the collection of German rods, the angler can detect many of English and Amercan make, usually of the lower priced kinds, cheap rods. machine made, and well adapted to the wants of the juvenile angler, or of those of more mature years, who would like to own a jointed rod which is not too expensive, and are not at all critical as to taper, weight, direction of grain, distribution of strain, and the other qualities which the finished angler requires to be contained in a fly-rod. Within the past ten years angling, as an art, has been most assiduously cultivated by a few enthusiasts in Germany, until upon the dark ground of a map of the Empire a few white spots could be made, each showing a center from which the light of angling science is diffused for a short distance, and then is absorbed in the darkness of that piscatory night which envelopes many rural districts in America where the popular idea of angling is to obtain the greatest number of fish in the least possible time. The German has never, until within the time named, looked at angling save as a means of getting fish; but, thanks to the enthusiastic fishers which have sprung up within a few years, there are quite a number of good anglers now in the country, and their numbers must increase. From this it will be seen that the best tackle is not in general use here, the demand for it being so limited that it is entirely supplied from foreign sources. Some light rods of native manufacture are shown which have a spike in the butt, which can be inserted in a bank or log, so that the flies may fish away while the angler seeks other recreation, and a novelty is a bell attached to a light bait-rod, which strikes an alarm when the bait was disturbed, and so arouses the attention, should it chance to be fixed upon some other object-a capital thing for boys who fish off New York wharves and sleep in the sun between bites.

THE AMERICAN EXHIBIT.

The American Exhibit is the most complete in all arti-.les pertaining to fishing with a hook and line, the fine

collection of the National Museum serving to illustrate the gradual development of this mode of fishing, and contains a series of articles ranging from the wooden books of the savage to the rent and glued bamboo rod of the dainty angler of to-day. In the room devoted to the display of these articles, it is interesting to observe how the implements of the savage man have, by contact with his civilized brother, gradually approached the forms approved by the latter as far as the materials of which they are made will allow. Thus, from the northeast coast of America there are hooks of wood, of bone, and of both materials combined in one; but the wooden ones are of necessity the largest and most clumsy, although when bent from one piece they are lighter than seems consistent with the strength required to capture the large fishes which the Esquimau usually seeks, and the same may be said of the implements from Alaska and the northwest coast down to California. Often the wooden hooks are of two pieces, joined at the bottom in a V-shaped arrangement, bound with some vegetable fiber, but the combination of bone and wood affords the best chance for the addition of a barb or beard, which is utilized in a manner which is quite effective; but wherever the iron or steel of the white man has been obtainable, its value over all other material has been quickly appreciated, and the most primitive use of iron for fish hooks is shown in those obtained from the Wallapai Indians, which is a pipe-shaped wooden hook with a nail for a barb, while other tribes have drilled a hole in a flat bone, and inserted a nail or a bit of steel in a sort of barbless hook. Combinations of bone and steel also enter into the heads of harpoons and harpoon-arrows, while some of the Indians of the northwest coast were fortunate enough to own iron enough to make the entire hook, which closely followed the patterns in use by the white fishermen. Even an eel spear is shown made entirely of iron by the natives. The lines which accompany these hooks are of grass, scaweed or kelp, whalebone, and skin of seal or walrus, the latter for the heavy lines used in the capture of large fish and for harpoon lines. A very interesting trawl line of sea-weed and whalebone is shown, and also a serviceable looking grass rope, which is attached to a sealskin buoy, and is evidently a harpoon line.

Not only the angler and the fisherman are interested in comparing the rude machinery of the savage with those of civilized man which are close beside them, and which give a complete history of the improvements in the mode of catching fish by man in his natural state to supply his daily food-man as a trading animal who catches to exchange for money or produce, and man, who having no pressing needs to fill, fishes for his amusementbut it also furnishes a field of study for the ethnologist as well. Following the line of development here shadowed, the next case contains hooks of various sizes and owen, the next class contains moose of various sizes and patterns, made by the "American Hook and Needle Congany," from that used for fly-tying and minnow catching up to those required for the great halibut, and an enormous hook, with a chain attachment, which might serve as a killock for a light yacht, intended for the largest shark, together with steel wire, illustrating the ten processes through which the material goes before being turned out a perfect fish-hook; bluefish squids of bone and metal, others covered with eel skin or cloth; bluefish drails; pearl minnows for angling, etc., in great variety. Next comes the spoons and other spinning baits of Buel, Chapman, James, Mann, and Trowbridge, as well as those abominable inventions known as spring hooks or "socdolagers," which, like fish poisons, it should be made a felony to use or have in possession.

Among the fishing lines can be seen heavy quarterinch tarred cotton shroud-laid lines for fishing in twentyfive or more fathoms of water, as well as raw cotton lines, both shroud and hawser-laid; trawl lines; lines of linen for angling; horse-hair lines; braided silk, both raw and waterproof; silk lines with a horse-hair worked in to prevent kinking. In fact, everything adapted to the taking of a fish, from a shark to a trout of four ounces, or even a minnow; "pickerel traps" for showing when a bait is struck while fishing through the ice, and silk worm gut of all sizes. In the collection of the National Museum may be found many artificial flies from the stores of Abbey & Imbrie, Conroy, Bissett & Malleson, Bradford & Anthony, as well as a case of those made by the skillful Miss McBride, while the patterns of reels seem to puzzle the uninitiated as to their object and mode of use. The light rubber reel, the perforated nickel reel of Orvis; and celluloid, brass and wooden reels.

DISEASED FISH IN KENTUCKY.—Versailles, Ky., May 10th. 1880.—Professor Spencer P. Baird, U. S. Commissioner Fish and Fisheries.—Dear sir:—Because of the very great interest you have shown in the propagation of fish, I take the liberty to ask of you information that is earnestly desired by this community.

Two years ago a company of gentlemen built a lake one mile from town, which covers thirteen acres of ground; it was well stocked with bass and newlight. They increased rapidly, and last season we had splendid sport. For two weeks they have been seen.

ground; it was well stocked with bass and newlight. They increased rapidly, and last season we had splendid sport. For two weeks they have been dying, and as yet we are unable to find the cause of the fatality. I have examined a large number of them, and will tell you as briefly and plainly as I can how they die, and what I have found upon examination. They will swim around with their heads to the surface of the water, thne after

jumping up once or twice, they die very quickly, have found the whole lining membrane of the stoma have found the whole lining membrane of the stomach inflamed, but that of the intestine only in patches similar to inflammation of the intestinal glands of man in typhoid fever. From time to time we have caught bream from the lake, but as none were intentionally put there, we have supposed that there were fifty newlights to one bream. Yet out of about two thousand dead fish, all are bream. Yet out of about two thousand dead fish, all are bream except about one hundred newlights and twenty bass. This inclines us to believe that the bream are peculiarly susceptible to the disease. The post morten condition differs so in the two varieties (the newlight and bream) that I will give them separately. In the bream the inflammation is more destructive—in some instances there were perforations of the bowel—its stomach and bowels were always empty. In the newlight the inflammation was not so extensive, the stomach nearly always contained food, and some fecal matter in the bowel. The lake is fed by a large, never-failing spring of pure water.

water.

Any information will place an entire community under obligations to you; therefore I hope to hear from you soon.

J. WAMERS STITT, M. D.

P. S. — I failed to state that some suspected poisoning from the fish-berry, but I could find no evidence of this; not even with the microscope.

Professor Baird sends us the above, that its publication in our columns may elicit suggestions as to the cause and remedy of the disease.

OREGON.-The Astorian, of Astoria, Oregon, gives the following interesting account of the work of the United States Fish Commissioners in that State:-

Mesers, Jordan and Gilbert, of the United States Fish Commission, left Astoria Monday moroing, by way of Kelama for the Sound. Their movements in Astoria were so quiet that many people were not aware of their present of here. Their business here was to collect statistics and information in regard to fisheries for use of the census luveaut. It collect services on the Astoria were some of fish in here. Their business here was to collect statistics and information in regard to fisheries for use of the census bureau; to collect specimens of every species of fish inhabiting or entering Columbia River, especially of the salmonida; to ascertain the number of species, and the habits and ranges of each. Of course a work of this magnitude cannot be completed in a few days, or even months, and it is thought that we may see them here occasionally for several years. Their next visit will be sometime in July. They have prepared and sent away several specimens of spring salmon, Oncorhynchus quinğunt, of blue-back O. hypsifario; of steel-head Salmo tsuppilch(t); and three species of sturgeon. In regard to the Salmo tsuppilch a very curious question is raised. It was first described as a trout by Sir John Richardson, in 1836; and from that time until a few years ago, no specimen had ever been sent to Washington, though hundreds of every other trout had been received, and but for the reputation of the coninent naturalist who described it, its existence would have been doubted. In 1878 Mr. Livingston sont a fine specimen, a foot long, from the Clackamas Stone, Now that Prof. Jordan has examined the steel-head Stone. Now that Prof. Jordan has examined the steel-head the ston eant a fine specimen, a foot long, from the Clackamas Stone, Now that Prof. Jordan hasexamined the steel-head ha thinks it probable that it is the Salmo tsuppitch of kichardson; and the question is whether it is a sen going fish, or only an immense river trout. From the class of fishes to which by its structure it belongs, the latter should be the case. The fish known as pike, chun, sucker, etc., is a true chul; allied to the Europoan fish of that name. The commissioners have not succeeded in getting many trout from our streams, as yet; only five from Jim Crow creek were shown them. One was the Salmo clarki or Clark's trout, named in honor of the explorer. An alcohol tank was left at the Kinney cannery and arrangements made to have several hundred trout preserved for inspection on their return. Readers of the Astorian may remember the description of a particular spotted trout, caught at Oak Point last fall by laft, Frod Kendald. This was preserved, and proves to be the Pacific red-spotted trout, common on the headwaters of the Columbia, but never seen so low down as Oak Point before. The fish found buried in the sand on the beach are now to science, and specimens are very much Now that Prof. Jordan has examined the steel-head Stone. Point before. The fish found buried in the sand on the beach are new to science, and specimens are very much wanted. Prof. Baird was mistakon in calling it Heleratleakus rostratus, which is an altogether different fish. The fish reported as shad a year ago, proves to be shad without a doubt.

Sea and Biver Hishing.

FISH IN SEASON IN MAY.

.GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as the may deem of value: State, Town, County; Weans of access; Hotel and other accommodations; Game and its Season; Fish and its eason; Boats, Guides, etc.; Name of person to address

Address all communications to "Forest and Stream Publishing Company, New York."

BISBY CLUB,-Mr. H. H. Thompson, of this city, Vico President of the Bisby Club, left this city last week for the club's headquarters, Bisby Park, Moose River Tract, Herkimer County. He was to have been joined at Utica by Messrs. F. W. Snow, of Ramapo, Robert B. and Frank Cable, of Elmira: A. Rockwell, artist, of Buffalo, and Chas, A. Walbradt, of Theresa. We need not wish the party "good luck," for they know how to catch their own fish and how to enjoy their days in the woods.

TROUTING IN THE CATSKILLS.—New York, May 20th,—We have just returned from a two weeks' trip among the Catskills. Mr. A. Whitney and wife, of Brooklyn, and myself and wife, left Grand Central Depot morning of

May 5th for Shandaken, on the Ulster and Delaware R. R.; fare \$2.90. We stopped at La Ment's Hotel; fished the Notch, Pine Hollow, Broad Street Hollow, Pox Hollow, Big Indian, and other streams in that locality; found fish plenty, but very small, and certainly a disgrace for any sportsman to take home. Tired of this location, we took the train and got off at Arkville; hired a team—price \$4-and drove to farm house of Mr. De Silvie, Grant's Mills, Delaware County, fifteen miles from railroad; fished Millbrook in Ulster County, and met with good success. Mr. Whitney and myself are sportsmen to the backbone, and will walk with any one thirty miles if necessary to catch two good sized trout, but when you come to small ones we will always put them back, and if every sportsman and true lover of trout would do the same we would have better fishing in a short time. We fished Millbrook four dnys, catching only enough to supply our table. The last day Mr. Whitney and myself caught one hundred and sixty and brought most of them home, and they were beautics, all good size. Boy-like, coming down on the railroad we had to open our basket to look at them, and they were mirred by more than one passenger on the train. We had a very pleasant trip, and I can say to our friends that there are good sized trout left yet, if you go in the right direction. Law is not up in Delaware County until June 1st or 10th. May 5th for Shandaken, on the Ulster and Delaware R.

VIRGINIA—Mt. Airy, N. C., May 15th.—Our "little" party, tired of the "Sanny South," went to the mountains of Patrick County, Va., a few days ago on a trouting, for a little recreation. The waters of the Dan are good right now. We hooked upward of three hundred in two days: also, with our guns bagged three large wild turkeys, two gobblers and one hen, besides pheasants, squirrels, rabbits, partridges, robins, doves, snakes, etc. The snakes were shot on our hunt in the mountains—rattlesnakes, adders, and black snakes. We seldom kill a black snake, unless he gets saucy. In our party was a deaf mute, one of the Siamese Twins' sons, Bunker. He enjoyed the trip hugely—full of life and fun. T. M. B.

Bass in Texas.—Waxahachia, Texas, May 17th.—I have before me your issue of May 6th, in which appears a communication from Willis, Texas, over the signature "C. L. J.," in which the writer describes his preparations for a campaign against the black bass. I am afraid, however, that if the gentleman confines his piscatorial pursuits to the killing of black bass in Texas, he will, in the language of the poet, "get left." I have fished all the principal rivers and best fishing grounds in the State, and killed every variety of fish known to exist in Texas fresh waters, but have never yet met with the black bass. What is known as the black bass here is rock bass proper, called in the northern States variously rock bass, striped bass, river bass, etc., according to the locality, and universally known as trout among natives of the Southern States. If "C. L. J." will carefully peruse Frank Forester's "Fin and Feather," he will find there such information in regard to black bass and rock bass as will forever settle in his own mind which of the two varieties abound in Texas waters; and he will never again be guilty of mistaking our gamy and toothsome favorite for the unwieldy but voracious black bass. Perhaps "C. L. J." will kindly furnish the readers of Forest AND Straka with an account of the first or opening battle of his campaign. I, for one, shall look with great interest for a record of his success with flies in capturing "Texas trout."

THE RICHARSON-RANGELEY LAKES.—The travel to this celebrated lake region has already commenced, and quite a large number of people are scattered about between Errol Dam, Umbagog Lake, and the Upper Dam, on the Richardson Lakes. At present writing the fishing on the Magalloway and Diamond rivers is first rate, and large strings are also being taken at Middle Dam, Upper Dam, head of the Upper Richardson Lake, Beaver Ponds, Richardson Ponds, and Mill Brook.

The two most direct routes, by Bryant's Pond and Andover, and by Bethel and Upton, seem to be the favorites at present, and most of the people who are visiting the lakes this spring go by one or the other. Later in the season, however, the "Dixville Notch Route" must become the favorite on account of the wonderful scenery along its way. TUR RICHARSON-RANGELEY LAKES .- The travel to this

une takes tins spring go oy one or the other. Later in the season, however, the "Dixville Notch Route" must become the favorite on account of the wonderful scenery along its way.

An unusually large number of round trip excursion tickets have been issued by the different railroads this spring, and tourists and sportsmen cannot complain for lack of diversity in routes. Some go in by Bryant's Pond and Andover, and back the same way, and others back by way of Upion and Bethel. The Dixville Notch tickets read various ways; some to North Stratford and Colebrook, by way of the Grand Trunk Railway, others by way of the Boston, Gonord and Montreal Railroad. From Colebrook you go down through Dixville Notch to Errol Dam, where connection is made with the degrant little steamer Parmachence, a new boat, built this spring expressly for this route. She runs daily to all points on Umbagog Lake, and up the Magalloway every Tuesday. Thursday and Saturday. She connects at the Berlin Mills House (Brown's Farm) with teams for head of Aziscohos Falls at Sunday Cone, with teams for the Middle Dam (Angler's Retreat); and at Upton with daily stages for Bethel, running through Gratton Notch, a romantic pass in the mountains.

Through the kindness of Chas. A. J. Farrar, Esq. anthor of "Richardson and Rangeley Lakes Illustrated," I am able to give from advance proof sheets of his book the following list of excursions to Dixville Notch and the Rangeley Lakes, and I have no doubt but many of your readers will be glad to learn at this early day the expense of tickets to the lakes, and the different routes:—

Boston to South Arm Richardson-Rangeley Lakes and return, via Bryant's Pond and Andover, \$13.00.

Boston to Middle Dam and return, via Bryant's Pond and Andover, \$14.00.

Boston to Upper Dam and return, via Bethel and Upton, \$4.50.

Boston to Upper Dam and return, via Bethel and Upton, \$4.50.

Boston to Upper Dam and return, via Bethel and Up-

ton, \$14.50.

Boston to Upper Dam and return, via Bryant's Pond and Andover, \$14.00.

Boston to Upper Dam and return, via Bethel and Upton, \$16.00.

Boston to Upper Dam via Bryant's Pond and Andover, return via Bethel and Upton, \$15.00.

Boston to Upper Dam, via Bryant's Pond and Andover, return via Dixville Notch and Colebrook, \$17.75.

roturn via Dixville Notch and Colebrook, \$17.75.
Boston to Upper Dam, via Bryant's Pond and Andover, return via Dixville Notch, Colebrook and the White Mountains, \$20.60.
Boston to Indian Rock, via Bryant's Pond and Andover, roturn via Dixville Notch, Colebrook and the White Mountains, \$20.60.
Boston to Indian Rock, via Bryant's Pond and Andover

Boston to Indian Rock, via Bryant's Pona and Andover, and return, \$15.25.

Boston to Indian Rock, via Bryant's Pond and Andover, return via Phillips and Farmington, \$15.25.

Boston to Berlin Mills House, Magalloway River and return, via Bethel and Upton, \$14.50.

Boston to Berlin Mills House, Magalloway River and return, via Bryant's Pond and Andover, \$16.50.

Boston to Dixville Notch and return, via Bethel and Patton, \$15.50.

Boston to Dixyme Avota and Actum, the Upton, St.5.50,
Boston to Dixyille North, via Bethel and Upton, return via Colebrook and North Stratford, \$15.25.
Boston to Lake Umbagog and return, via Bethel,

\$11.00, Boston to Errol Dam and return, via Boston, Concord

Boston to Entro Dain and return, via Boston, Concord and Montreal R. R., \$19.00.

These tickets many be procured in Boston, New York, Philadelphia, Baltimore and Washington, and other large places, at all the general ticket offices.

A new steamer has also been built for the Richardson

A new steamer has also ocen unit for the Richardson Lakes, and will ply this summer between South Arm, Middle Dam, Upper Dam and all points on the lake. The roads from Andover to the South Arm of the lower Richardson Lake, and from the Middle Dam to Lake Umbagog, have both been laid out as county roads, and will be in first-rate condition this summer. RAMBLER.

THE OLD SCOUT GOES FISHING

A FRIEND of mine as was out a fishin', together with A FRIEND of mine as was out a fishin', together with me, a few days ago after trouts, has showed me your paper of Thursday, March 18th. In that you has a article tellin' how as to ketch trouts on April 1st. Now you must have been a April foolin', and didn't think as how you says grizzly kings and perfessers and spiders coopers and sich. Now I don't know much of them flys, but I'll tell you—as you asks it that folks send you accounts of the triumphs and reverses of your readers—just what kind of luck them perfessers had up here in Montanny last week. Well, we went a fishin'—two officers and a citizen, a New Yorker, and me; and then officers and that citizen they was just fixed up with rods as looked like a long whip, and wasn't to my eye half as officers and that cutzen they was just fixed up with rods as looked like a long whip, and wasn't to my eye half as strong, but they said them rods would yank out any trout as I showed 'em. Well, when we got inter the mountains, and went a fishin', they puts on rooster hackles and pintail grouse fethers, as they called gray perfessers. I told 'em it weren't no use, but they lafted and said all right, you just watch. Well, I couldn't beleeve as sensible fellows would calkerlate in ketchin' trouts with them and pintail grouse fethers, as they called gray perfessers. I told 'em it weren't no me, but they lafted and said all right, you just watch. Well, I couldn't beleeve as sensible fellows would calkerlate in ketchin' trouts with them feathers, and laffed to myself; but at it they went, sneeken up through the briars and brush, and showin heeps of spunk, for they didn't mind the cold water as much as I did, and just tried like all that was out to ketch them trouts. But it weren't no use; they just cum up and took a look around and went off, and never no more thought of bein' fooled by fethers than I would of bein' by a Crow squaw for a Sioux buck. Then they tried black parmers and brown ibises and red parmers, and a hull lether book full; but it weren't no more use than the perfessers. I told 'em them trouts han't ever been to skool in the colledges, and they didn't know the perfessers. That kinder riled 'em, but they laffed, and began trying grasshoppers made of gum, and black tumble bugs and tater bugs, and the Lord only knows that they had more of them bugs than ever growed in Montanny; and I kep' on a laffin. Well, now, don't you know, all the time as them three fellers was a playin' at fishin' with them things, I was a fishin'. I was a ketchin' fish. Now you write a fishin' paper, and you know when a man goes ahed of you fishin', a foolin' about and wadin' threw the water, 'taint much of a chance of a man what comes behind a ketchin' much fish; but them trouts was just hungry for something to eat, and fethers is mighty poor eatin'; so I come along behind 'em, and throwed my line. Now I had a hook—a real old Limerick hook with a twist on it—and I had a chunk of deer meet, and the way them trouts cum up and took that meet were a caution. They was just as hungry as they could be, and sumtimes a big fellow would git the meet and not git caught on the hook; and when I put on another piece of meet he just had hook—a real old Limerick hook with a twist on it—and I had a chunk of deer meet, and low when a low of them

Connecticut—Norwich, May 10th.—A number of gentlemen interested in glass ball shooting met on Friday evening and organized a shooting club. A constitution and by-laws were adopted, and the following officers elected: President, A. S. Childs; Secretary, C. W. Scott; Treasurer, E. A. Tracy. The club meets twice weekly for practice,

The Rennel.

Address all communications to "Forest und Stream Publishing Company, New York."

-Mr. Charles Lincoln, the superintendent of the late show, has returned home; his address, in the future, will be care of Gillman Brothers, Detroit, Mich. It would be a great oversight on our part if we failed to compliment Mr. Lincoln on his supervision during his stay in New York. On the days of the show he exhibited more than ever that wonderful executive ability to conduct everything to everyone's satisfaction. We did not hear one murmur.

DEPARTURE OF THE ENGLISH JUDGES .- The steamer City of Richmond, which sailed from this port on Saturday last, had on board both of the English judges, Mr. Dalziel and Dr. Stables. Their stay here had been unavoidably protracted to a much longer period than anticipated when they left Liverpool, on April 13th, and neither were sorry that the time had come for their return home. Since their arrival on the 24th ult. their spare moments were employed in visiting the places of interest in the metropolis and in trips to the neighboring citics, Dr. Stables having made two visits to Philadelphia and also going on to Baltimore and Washington; while Mr. Dalziel had been to Boston and made Niagara Falls a flying visit. As the doggy views of these gentlemen may be interesting to our readers, we are pleased to be able to give in a brief way the impressions gained from several conversations held since the exhibition. Mr. Dalziel, in speaking of the show, said : "Regarding the sporting classes, especially the setters, they were remarkably good; but the natives, in such a large class as shown, exhibited too much variety, which careful selection in breeding will only reduce. The pointers, although excellent, generally speaking, were not as good as the setters. For practical use there seemed to me to be a disposition to breed the dogs too fine and small. From conversations with shooting men as to the lay of the country inhabited by game, I would judge the old Spanish breed of pointers would prove the most useful. I was greatly surprised to see such a strong interest taken in shooting matters, and I trust to be able to come back again some time in the autumn and take a trip to the Western prairies. compared with like exhibitions in England, I deemed the building very well adapted to the show-in fact, could not be excelled; it was far better than that in which the show is held in Birmingham, and equal in attractions to the Alexandra Palace and more spacious. Doubtles from inexperience, resulting from shows of the kind being young in America, many exhibitors did not take a beating with that silence that they do in England, and would not have expressed themselves as they did had they remembered the terms on which they made their voluntary entries. The general class of exhibitors as a whole was very nice to do with, and the above remarks apply only to a few, I was pleased to see two American gentlemen have such large and excellent kennels as those of Mr. Moore and Mr. Godeffroy, and I trust to hear of more of the same kind before many years have passed away. In England large kennels are continually cropping up and dying out, and it is not always in the me extensive that the finest specimens are to be found, as there are many small breeders with only three or four dogs who turn out the finest kind of animals. The gen eral condition in which the dogs were shown was ex lent, although there were many cases which required the attention of a veterinary surgeon, and a large number still whose general appearance would have been greatly improved by judicious grooming. Exhibitors of nonsporting dogs especially were lacking in the art of show ing their dogs in the blooming condition that they are at home. The non-sporting classes were very variable in character, and I was surprised to hear that many of the dogs shown before me had been imported from England at the extravagant prices told me. In the toy-class. there were a number of very good specimens, but these were the exception; and I am astonished that there were no Blenheims or King Charles spaniels shown, which are beyond doubt the most beautiful and pleasing of all drawing-room pets. The benching and comfort of the dogs were admirably seen to by the Superintendent, Mr. Linceln, and there was little delay in presenting them for the judging. I was agreeably pleased to see that the dogs were fed on Spratt's patent fibrine biscuits. These are ubiquitous, as I see them used at German and French as well as at all our best English shows." Dr. Stables said: "I heartily indorse these comment-

of Mr. Dalziel, and I too was very much disappointed with the non-sporting classes, with the exception of the skye and toy dogs. The fox-terriers were wretchedly bad, but I was very much delighted with the setters, the Irish in particular, which we cannot beat in England The show arrangements were very good, but the pent compared with English benches, were too heavy, and would recommend the sides to be of slat-work or wife netting, either of which affords more ventilation, and is besides, less expensive. I trust to return at some future received, particularly from the gentlemen in Philadel-phia." day, and shall always remember the kindness which I

We wish them both a bon voyage.

Additional Entries to Field Trial Derby.—The following entries are in addition to those published in list in issue of April 8th:—
Dr. H. F. Aten's lemon and white pointer dog Dick, by Snapshot-Orgill's Rose, whelped June 17th, 1879.
Dr. H. F. Aten's lemon and white pointer bitch Nellie, by Snapshot-Orgill's Rose, whelped June 17th, 1879.
R. Ll. Purcell Llewellin's black and white setter dog Count Nick, by Count Wind'em-Nora, whelped Aug. 29th, 1879.

Count Nick, by Count Whateh-Nora, whelped aug. 27th, 1879.
R. Ll. Purcell Llewellin's black and white and tan ticked setter dog Count Noble, by Count Windem-Nora, whelped August 27th, 1879.
R. Ll. Purcell Llewellin's blue Belton setter bitch Dashing Romp, by Dash II.—Norna, whelped June 2th, 2000.

1879.
R. Ll. Purcell Llewellin's black, white and tan ticked setter dog Dashing Rover, by Dash II.—Norna, whelped June 9th, 1879.
R. Ll. Purcell Llewellin's blue Belton setter dog Dashing Ruthven, by Dash II.—Norna, whelped June 9th, 1879.

The above closes the entries, with one hundred and pighteen in all.

EASTERN FIELD TRIALS RULES.—The Eastern Field Trials Club held an important business meeting on the evening of Friday, May 21st, in this city; Dr. H. F. Aten, President of the club, occupied the clair. After the usual routine business had been disposed of, the Comevening of Friday, May 21st, in this city; Dr. H. F. Aten, President of the club, occupied the chair. After the usual routine business had been disposed of, the Committee on Rules reported, submitting a code of rules to govern the field trials of 1850, with instructions to judges, only slightly different from those of 1879. The proposed rules were fully discussed and finally adopted. The principal amendments to the rules of 1879 were in rules one and four—in the first, giving discretionary powers to the judges to accord any dog beaten in any of the heats a second chance to show his behavior on birds. In the fourth, determining the points of merit, as follows: Pointing, 35; pace, 15; backing, 8; style, 7; stanchness, 8; ranging and quartering, 10; obedience and disposition, 7; retrieving, 10; total, 100. Negative points of demerit: False pointing, 1 to 7; breaking in, 3 for each offense; breaking shot, 5 for each offense; chasing, or breaking shot, and classing, 10 for first offense; ruled out for second. A series of instructions to judges, and rules for the brace stakes, unchanged from those of last year, were also adopted, and the Secretary was directed to have the rules and instructions printed for distribution to the members, or to persons wishing to make entries in the various stakes. Points are allowed for retrieving in the various stakes. Points are allowed for retrieving in the puppy stakes, but not in the nursery stakes for pupples under one year of age. Several new members were admitted the club, and the names of many applicants were read to be voted upon at the next meeting, at which, also, vacancies in the list of Vice-Presidents and in the Rescutive Committee are to be filled. Mr. H. N. Munn, of the Scientific American, was appointed by the President to act as Treasurer ad interin, until the next regular election of officers. A special meeting will be held at No. 37 Park Row, on Friday, June 4th, at 4 P.M., at which time the Executive Committee will also assenbe to choose and appoint the judges for

CORRECTIONS IN DOG SHOW REPORT.—Under the mis-cellaneous class heading the following paragraphs ap-peared in our report of the dog show; they should have been separately inserted in their respective places, as

been separately inserted in their respective places, as follows:—
POINTER DOG PUPPIES.—Schieffelin's Pericles (Sensassion-Juno) received a high commendation, and we think a higher place should have been given him.
NATIVE ENGLISH SETTERS.—Dog Class.— Tappan's Sancho was a very good-looking dog, by One-eyed Sancho out of Flora, and it was the opinion of others than ourself that he was of finer type than several of the winners—he was passed unnoticed. And also, Godeffroy's Satan, a very well-made black dog, was awarded a V. H. C.—well deserved.

Bitch Class.—Aldrich's Smut came in for proper recom-

C.—well deserved.

Bitch Class,—Aldrich's Smut came in for proper recommendation; she was also winner of the special prize club medal for best black setter bitch.

In speaking of Horace Smith's pointer Sam, the line should read, the line of demarkation indicating the division between the lobes of the cerebro, not cebrum, as printed; and Mr. Moore's red Irish setter Champion is Berkley, not Berkly. These and other typographical errors we regret did appear.

TRAINING FOXHOUNDS.

TRAINING FOXHOUNDS.

I WAS very glad to see the article by "T. T. P.," in your last week's paper, in regard to training foxhounds. I, with him, hope some of our brother sportsmen, lovers of that finest and healthiest of all sports, will contribute to your columns in that line. Before moving from Maryland, some eight years ago, I took great pride in my small pack of fine houted. One day, when some dozen of us farmers had had a beautiful run of about three hours after an old red fox, over the grand hills and rich valleys of the western shore of Maryland, and had just commenced to dig him out, having along some two dozen of the finest and fastest hounds that over tongued behind a fox, a mad hound got among them, and of course, as is always the case, bit the best and we were compelled to be on the safe side) to kill all of them, and sadness comes over me to-day when I think of the dear old dogs that we had to sacritice that day, and never will any of us forget it. As yet we have not got a full pack, as we will not have any but the pure stock; a through by the time we get all that we have engaged, we hope to have as fine a pack, as feat and true as any in the country. I always take from six to eight weeks every winter at this glorious sport, and many are the foxes we kill. But to the training of them. I trained more than half of the old pack, and nearly for ten or twelve years had the breaking of from two to live, and my plan was this: Frist, I was very particular that no dog got to my bitch but my old Virginia foxhound, which stock I knew to be pure, and

when the puppies were large enough to run about, I let them run all day in a five acre yard around the house, only putting them up at night. I gave them plenty of sweet hilk with bread soaked in, three times a day, and when they were about three months old (or as soon as I thought them large enough) gave them their first lesson in getting over a fence, by getting on the opposite side of a two-rail pen I had built, with a little piece of meat, letting them smell it over the rails, and when they had succeeded in getting over tesse two rails well, put on another, and so on, until I get them so as they could jump a fence as well as the old dogs. I trained them thus three or four times daily, or oftener if I had the time, and it would have surprised you to see how quickly they learned. I never allowed them to run a fox or go on a hunt until they got at least ten mouths old—a year is better, and fifteen months still better—when they are able to run fast and get over a fence. After they were six or seven months old, and after a cool rain insummer, I took them, with an old dog, after a ratbit, taking my gun along, and after they had run if view or the minutes, shot it, and let them eat it. This I did perhaps a half-dozon or more times during tho summer, letting them run it longer every time, until they got so that they could catch it, or run it to earth, and in either case I joined in the sport with them, and when over, used to pet them, and make a fuss over them.

About the 1st of December, if they were fully ten months old—I tried to have them a year old by that time—I took them on their first fox hunt, it of course being the first time they cever were allowed to follow me in the saddle; and as soon as my old dogs gave tongue I do hark my young dogs in, and ride as close after them as possible, and if the fox went to earth, I would got work and dig in to him, which, when accomplished, would take each pup (the rest keeping the old dogs off), down in the hole, having placed a shovel before the fox to keep him in, and m

dogs that could remain out over three hours. He would either get caught or have to go to earth inside of that time.

Some of your many readers may wonder how I could depend on my dogs only running a fox if I allowed them to run rabbits when young. I will explain. I never allow them to run a rabbit when in the saddle, or after they hear my horn. If the young dogs get after any before I find a fox, I get off my horse, and go on them with a switch, after which I get on my horse and give a note or two on my horn. I may have to do this a dozen times before I get them thoroughly broken, but hounds are much quicker to learn than most persons think, and I don't often have to whip them but a few times; and I would defy any man to get those dogs to give tongue after a rabbit when I got on my horse and gave a note or two on my horn. Then again, I could get my gun and start after rabbits with them, and kill all I wanted, provided they did not run across a fox. I have killed eighteen in a day with them, and the next morning get on my horse, and they would give tongue after nothing but a fox.

Many train their hounds in other ways, and I know some older fox-lunters than I am that take their pups fox-hunting before they can run much faster than a man, and think it strange if they leave the trail, or don't go on after the old dogs. This, in my opinion, is entirely wrong, and I don't think any puppy should be allowed to run after a fox until they get at least ten months old. If the blood is pure and the pups treated right, there is no danger of them not turning out all right. My brother and self take trouble in improving the stock, if possible.

I hope others will give their manner of training hounds.

KENNEL NOTES.

NAMES CLAIMED .- Darkie-Mr. Charles York, of Bangor, Mc. NAMES GLAIMED.—Datate—art. Charles Fors, of banging, acc., claims the name of Darkie for his black, white and tan dog puppy, whelped Jan. 2lst, by Lelaps—No. 150, N. A. K. C. Stud Book—out of Starljaht—No. 515 N. A. K. C. Stud Book—four of Starljaht—No. 515 N. A. K. C. and tan setter Moll III. to owner's Blossom. Lady of the LakeDruid.—Dr. G. A. Stark's Lady of the Lake to Mr. Arnold Burgos'
Druid. Res.—Flott—Mr. R. F. Dorrances, Wilkesbare, Pa., Bess,
Rake—Fanny to owner's Fleet, Rock-Peg. Judy-Donald — Mr.
John P. Barnard, Jr.'s, bull-bitoh Judy, winner of second prize,
New York, 1889, to Sir William Verner's Donald, winner of first,
same show. Sting-Punch—Messes. J. and P. Laurence's Sting to
Mr. J. P. Barnard, Jr.'s, imported Punch. Lauderdale, by
Dourlass out of Alisa, to owner's Johnnie Fae, white and black
ticked, by Rob Roy out of Doll. Glysy-Gordon—Mr. J. R. Tiley's
black and tan setter bitch Glysy to owner's Gordon. GraceGordon—Mr. J. R. Tilley's black and tan setter bitch Grace to
owner's Gordon.

SALES.—Norah—Dr. J. S. Niven, of London, Ont., has purchased through Mr. George Jamison, Belfast, Ireland, the Irish terrier bitch Norah, by Spring out of Nettle, served by Mr. George R Krehl's celebrated champion Sporter.

DEATH .- Punch -- Mr. J. P. Barnard, Jr.'s, Punch, May 10th, on way to New York, his death being caused by the intense heat.

Archern.

Address all communications to "Forest and Stream Publishing Company, New York."

PRIVATE PRACTICE CLUB. APRIL SCORES.

HE record for the month is certainly a good one, almost every THE record for the month is certainly a good one, almost every member increasing his average. The best York Round scored by any member during March (44-450 by Mr. Will H. Thompson), was exceeded eight times by the same archer, and twice by Mr. L. I. Peddinghaus, of the Arden Archers. The latter gentleman has improved during the spring with amazing rapidity, his score of 108 hits, with 476 value, being an achievement rarely occurring upon the practice days of the Royal Toxopholites—the finest body of archers in the world. There are probably not more than twenty living archers who can boast of such a record. The York Round of 111 hits, 555 value, obtained by Mr. Will H. Thompson upon the 5th of April, is the best yet obtained in America. In Class II, the best round was the one last named of 111-855. In Class II, prominence was taken by Mr. Peddinghaus' score of 128-476, while Mr. Jesse B. Devol bore off the palm in Class III with a score of 72 bits, 250 value. At individual ranges some very high records were made. At the 100 yards range a marked improvement in the general shooting was made. range a marked improvement in the general shooting was made. This is the range at which most of our archers fail, and is the one where most systematic and intelligent practice is needed. At the Syards range, the line of "high scoring" was passed by Mr. Peddinghaus three times, by Mr. Maurice Thompson four times, by Mr. Lorenzo Devol once, and by Mr. Will II. Thompson four-teen times out of lifteen scores. At 60 yards, the "point of excellence," placed at 120 points, was passed by Mr. Will III. Thompson four-teen times, by Mr. Dorenzo Devol once, by Mr. O. W. Kylo once, by Mr. L. L. Peddinghaus four times, by Mr. Frank II. Wall-worth once, and closely approached by several other archer; the record of 24-154 of Mr. Maurice Thompson being an oxceedingly fine performance. A notable increase of the number of scores exceeding 100 points at this range is one of the meet satisfactory evidences of the general advancement of the members. Several members have failed to send in any report to the secretary, and we are sorry to note the absence from our score lists of such excellent shots as Mr. Ford P. Hail, Mr. E. T. Church, the president of the club, and Mr. Parun. S. De Graft. We can but This is the range at which most of our archers fail, and is the one such excellent shows as air Four F. Han, Sh. E. I. Church, the president of the club, and Mr. Parm. S. De Graff. We can but trust that their scores may reach us in time to appear in next re-port. The wideloning interest in the society is marked this month by the addition to membership of two good archers and true from far off Oregon. We welcome them "with true heart and from far off Oregon. We welcome them "with true heart and courtesie," and trust they may know the Joys of the good yew bow for many and many a happy day. The archery season is now fairly begun, and to every member, wherever situated, the secretary wishes all mentic pleasure and success, "stout arm, strong how, and steady eye."

WILH H.THOMFON,
Secretary and Treasurer P. P. C.

ARCHERY AT PROSPECT PARK .- The Brooklyn Archery Club ARCHERY AT PROSECT PARK.—The Brookly Archery Colows out in full force on Saturday affermoon, the 15th inst. Visitors were present from the Ascham Archers of the Eastern District, also from the New York Archery Club. The York and American rounds were shot, and resulted in some fine scores. At the conclusion of the rounds, the captain proposed a shoot at 150 yards. Fifteen archers took part in this, and some fine hits were words. made.

The Park Commissioners are doing very much for archery, having given the club elegant grounds directly south of the Ninth street entrance. They are sparing no labor nor expense to render it the less archery range in America. Butts are being creeted for the ladies' short ranges. On Decoration Day, the 31st, the Brooklyn Club will hold their second annual field day. Many visiting archers will be present, and a grand time is expected. A CHALLENGE STILL OPEN.—New York, May 20th.—Editor Forest and Stream;—In your Issue of to-day I notice the letter of the Secretary of the N. Y. Archery Club. I regret that we never received his acceptance of our challenge; It probably miscarried. I would also und that we have no mixed team, such as the writer speaks of, nor have we ever had such a one, and we are still ready to shoot the match as proposed. W. Hollerton, President Orliani Archers. to shoot the match as proposed. W. HOLERGYON, President Oritani Archers.

Editor Forest and Stream:—
We notice in your issue of the 20th a communication relative to the challenge from the Oritani. It may be proper to state that the N. Y. Archery Clob has never officially accepted or decined the Oritani challenge, but that one of its members stated informally, to our President, that they would not accept the challenge unless four gentlemen, whose names were mentioned, and who are among our best shots, were excluded from the team. Nothing was said at the time about extra territorial membership, or membership in any other cith, or as to indies shooting, the challenge having been for a team of four gentlemen. There is but one inference that we could very well draw from their official silence and informal answer. It would certainly seem to have been more manly to have frankly admitted their inability to compete with our team, than to now shelter themselves behind the high moral principles respecting territory and membership, that they have since then adopted, especially as all the objections now urged would have still existed after the exclusion of the four ventlemen whom they named, and since that challenge they have asked gentlemen, who were members both of the Oritani and the Manhattan, and who did not reside in New York, to join their cith. It does seem as though the N. Y. Club had taken too much on its hands when they can constitute themselves censors were the membership of other ciths. As it as if difficult to see how their moral principles can be injured by competing with any body of ladies and gentlemen, and we do not understand that anything is imputed against our members personally, the Oritani challenges the New York Club us shoot a match, at any time or place, convenient to them, after June 1st, the teams to be composed of the six best shots (either ladies or gentlemen, or four gentlemen against the Oritani's two ladies. The New York Club is to take their of the recognized rounds; York or American, for g

NOTES AND QUERIES.

Shawangurk.—Linedu, Me., May 12th.—I notice in your issue of May 6th, under head of "Notes and Queries," a communication from Mr. 6t. W Yan Sichen, at the close of which he requests the meaning of the Indian word "Shawangurk," pronouced "Shamguin." There is a tribe of Indians living on an Island in the Penoloscot River, near here, one of whom, Tournah Schastan, an intelligent, bettyre man, gives me the meaning of the word as "Governor."

F. C. PLAISTED.

The Atstrallan Teams.—Mr. Shaw writes us that nothing definite has yet been arranged about his team. We learn also from same source that the Australian Team, now in England, are very much dissatisfied with the matches their agent has arranged for them; they are mostly engaged to play against eighteen or odds, and not against first-class players. This has been caused through the dissatisfaction caused when Lord Harris took his late team to Australia. The Captain of the team has put a letter in the English papers expressing his regrets about the affort and the matter has been answered by Captain Holden, Secretary of the Nottingham County Club, which is as follows:—
"Sir: Yardous letters have appeared, and great differences of opinion exist regarding the Australian cricketers who have lately arrived in England. I can only say that from my experience they mean money, and don't care much about cricket. I offered to make a match—Daft's American Team against the Australians—to be played at Nottingham, on the following terms: The Australians to take one-third of the gross receipts, Daft's team one-third, the County Club the remaining third for advertising, ground men, police and all other expenses. This James Lillywhite, on the part of the Australians, declined, stafing that one-half of the gross receipts were the only terms on which they would play. This I percemptorily refused, giving at the time the same oplain which I do now, viz., that money is the primary, cricket a secondary consideration in their visit to this country. I write this on account of a letter which appeared a few days back from Mr. Alexander, the manager of the Australian team.
"Hersey Holden".

"I am, sir, your obedient servant,
" HERRY HOLDEN,
" HON. Sec. Notts. County Cricket Club.
" Junior United Service Club, S. W."

ST. Georges (2d) vs. States Island (2d).—A team calling theaselves the second eleven of the St. Georges, but which really contained several first cleven men, visited the island club on Saturday (May 22d) last and obtained a victory by IT runs. The game was close and interesting, and was witnessed by a large number of spectators. The feature of the play was an excellent eath at slip by Richardson, a pretty piece of run out by Conover, and a terrille sixer into the bay by Inman. The batting, with one exemption, was of that weak description that renders a report of the full source all that is necessary: full score all that is necessary :-

Young America vs. Wakeffeld.—In our last issue we predicted that the splendid condition of the Young America's grounds at Stanton would lead to large scoring during the socoon. This was verified on Saturday last as the subjoined scor

will show. The bowling of the visitors was completely collared. will slow. The bowling of Lov Orsions was completely collared, and 252 washe result of the Young America's innings. In the Wakefield's second Jarvis was making a good stand when rain prevented the continuance of the game at 5.40 P.M.; the home team winning by 253 runs on first innings scores:—

CHESTNUT HILL US. GERMANTOWN .- Played at Nicetown, May CRESENDE HILL IS. GERMANTOWN.—Played at Nicetown, May 223, and won by former in one innings' game by H runs. This match was witnessed by a large number of Philadelphia cricketers, as it was the first appearance of the two new English professionals, Brownlead and Tyers. The former is a medium-paced, roundarn bowler, with good break and work. Tyers is much faster, and a remarkably strong bat. Browhead fell to a beauty from Patterson, his second ball. The following is the full score:—

Total ... 5 Total ... 165 MR. W. G. GRACE'S CRICKET CAREFR.—The presentation to Mr. W. G. Grace, in July Inst, at Lord's, of a costly testimonial in re-cognition of his marvelous merits as an all round cricketer, was a worthy tribute of admiration of his play, subscribed for, as it had been, by all classes of players. It is now generally under-stood that we shall see but little of him in the future, except, perstood man we small see out interest aim in the returne, except, we haps, in County and Gentlemen's.Players matches, and the folloing statistics of the career of the most famous cricketer that evilved will be perused with interest.

The appended tables show at a giance Mr. Grace's performance parized at the close of each season since his debût :

| | | BATTING . | AVERAGES. | | |
|--------------|-------|-----------|---------------|--------|---------|
| ear. Inning. | Runs. | Average. | Year. Inning. | Runs. | Average |
| 864 7 | 402 | 57. 3 | 187330 | 2, 139 | 71. 9 |
| 865 13 | 319 | 21. 7 | 1874 31 | 1,658 | 53.15 |
| 866 15 | 610 | 42.10 | 1875 46 | 1,498 | 32.26 |
| 867 5 | 154 | | 1876 42 | 2,612 | 62.15 |
| 888 9 | 588 | 65. 3 | 1877 37 | 1,474 | 39.31 |
| 869 23 | 1,320 | 57. 9 | 1878 38 | 1.116 | 29.14 |
| 870 33 | 1.808 | 54.26 | | 880 | 35. 5 |
| 871 85 | 2,739 | 78. 9 | | | |
| 872 26 | 1.485 | 57. 3 | Totals, 415 | 20.842 | 50.92 |

Thus in sixteen consecutive seasons Mr. W. G. Grace has con ploted 415 initings in intr-telass matches, and obtained in all 20,325 runs; his average, which has in no season been under 24, thus being for his currect to date 50,32 runs per limitigs. This is, without doubt, by far the most marvelous record of batting performances ever chronicled, and it may well be asked, "Will it ever be surpassed?

Administer two doses of santonite, five grains to a dose, one at night and one next morning, followed by custor oil. The dog should ask twelve bours previous to glving medicine.

J. J. K .- The owner of the bull-terrier Tarquin is Sir William Verner, Eart., % Eaton square, London, England. Champion Turquin and his son Superbus buve gone home, and are now in London. Read FOREST AND STREAM of May 20th; it tells about

H. H., Hollidaysburg .- You say that your dog's eyes are in-H. H. Hollowysourg, -100 say that you do, o you accom-famed, and have been so for six months, watering during that time. If such had been the case, they would have discharged a nuce-purulent matter. You had better cleanse them with worm nucc-purulent matter. You had better cleans other with warm water, and twice a day use the following wash: Two grains of alum, dissolved in an ounce of water.

H., New Brunswick, N. J.-The constant losing of coat by your H., New Brunswick, N. J.—The constant losing of coat by your setter can probably be prevented by giving her a tesponoful of sulphur once a day for four or five days, and occasionally after, small doses from time. It would also be well to give her a dose of sulphato of magnesia twee a week, which treatment at this season of the year is beneficial to most dogs.

J. L. A., JR., Boston, Mass .- Your friend's puppy is out of cond. D. A., Jan. bosom, ass.—I our trients puppy 18 out of condition; probably distemper may foliow. We would advise you to give her at once Small dose of sulphur, say once a day for four days, and twice during the week a tesspoonful of sulphate of magnesia. Should the little birch continue in poor spirits, then give two grains of quinine three times a day for two or three weeks. Keep her warm and dry.

O.J. T.—Dopth of 18ft, boatabout 2ft, though much depends upon the model. If flat on the floor, less will do, but if round or with much dead rise, a little more. Mast, 12ft, above rail, stepped 3ft, 6in, from bow; use spriisall 9ft, on luff, 11ft, foot, 7ft, 6in, head. About 40 deg. rise to the head and 18 deg. rise to foot. The sprit ships into a grummer on the mast 2ft, 6in, above foot of sail, and the other cud into a rope or cord eye at the peak.

and the other end into a rope or cord eye at the peak.

INQUIRER, Falisport.—For waterproofing tent, take half pound sugar of lead and half pound powdered alum, dissolve them in a bucket of pure water; pour off into another vesse, and steep the rent in it; soak thoroughly; hang up to dry, but do not rinse, Kemp's "Yacht and Boat Sailing," price \$12 for new edition; Neilson's "Boat Building," \$1.55; can obtain either. For rigsing model yachts see "Model Yacht Building," by Biddle, \$1, or Walton's "Model Yachts," \$1.50.

Mas. S. A. B., North Woburn, Mass.—You are correct in your idea that your setter puppy is afflicted with St. Vitus' dance, or chorea, as this purely nervous affection is more often called. The probabilities are that the dog has had the distemper, possibly in a mild form. You must be sure to feed it on strong meat brother Give doses of quinine two grains, nux vonica one-eighth gram three times a day, and continue for three weeks. Moderate exer-cise when possible and fresh air will sid toward effecting cure.

cise when possible and fresh air will vid toward effecting cure.

W. J. PERCIVAL, Palo, Mich.—I send you with this the head,
wing and leg of a bird killed around a small marshy lake here.
Please give name of it. I think/from what I have read and the
picture in Webster's Dictionary, that it is probably a gallinule.
Does Hallock's "Sportsman's Gazetterer' treat of the different
kinds of birds? Ans. Your bird Isnot a gallinule, but a rail, the
common sora (Porsana carolina). The "Sportsman's Gazetterer'
treats of the different kinds of game birds—this among the

G. E. J.-The Creedmoor rules do not in general provide for the settlement of a tie where a ladge is given to be taken by the winner on the greatest number of matches, and generally a special provision is made in the conditions of the match. The most common way, as in the case of the Champions-Marisman's badge at Creedmoor, is: "In ease of a tie the highest aggregate score of all the competitions participated in up to that time to decide." Or it may be better to shoot off the tie on same position.

St. L. R. C .- The cup can only be won according to the condi-Set L. R. O.—The curp can only be went against a feet entire tions attached. No one has a right to claim it after winning it three fines, unless such condition was distinctly expressed in the doed or resolution offering the cup. If, as you say, "it was to be rowed for annually," it remains an annual challenge cup and canrowed for annually, it remains an annual challenge cup and cannot become the possession of a club any longer than it is able to
hold it from year to year. If a club refuses to row for it more
than three times the cup reverts, of course, to the Mississippi
Yalley Rowing Association. Offering chullenge cups which can
never become property is, however, to be deprecated.

CANVAS CANOE.-Give the canoe plenty of floor for sailing, and CANVAS CANOE.—Give the cance pentry of noor for saming and opin, deep amidships will be enough, although you can go up to 12in. Nellson's "Boat Building" is about the best published. You had better await the new edition, revised by Dixon Kemp. Price about \$1.50 at Manning's Yacht Agency, 53 Beaver street, New York. "The grooves into which the canvas is laid" has refer-York. "The grooves most onto the control of the canvas is laid across the keelson, must be cut in the center at each end, so as to bring it up on each side of the suom and post, where it is tacked down into the grooves mentioned. Experiment is the best

J. L. H., Milwaukee .- My puppy's right fore shoulder, leg and J. L. H., Milwaukee,—My puppy's right fore shoulder, leg and foot seem partially paralyzed, with constant twitching of the muscles of shoulder and leg. In running or jumping he cannot control his actions, causing him to frequently fall over, but he does not suffer pain. Is there any remedy? Ans. Time and a tonic combined with good food and moderate exercise, may bring him all right. When the fore-quarters are effected in this way, there is more chance of a speedy cure than if the trouble was located in the hinder parts. Give doses of quinine, two grains, three times a day, and continue for three weeks. Write result of treat-

ment.

J. G., Toronto.—Your center-board is much too small to be effective. As you say the boat is now well balanced, increase the length of the board at each end, making it due to six feet long. Straddle the mainmast over the trunk. If objectionalie, increase the board two feet at forward end, and give it the full depth of the boat on the after end. A keel would, however, be the simplest remedy, as you can add to it or cut away until effective and well balanced. About eight to ten inches deep aundable "drop" of the board is obtained from observation, and will vary with wind, weather and course.

CANONIER, Boston, Mass .- Please describe to me the differ CANONIER, Boston, Mass.—Please describe to me the difference between the eggs of the bank swallow and those of the white breasted swallow, and also give proper name of latter; also size and color of the powee's eggs. Is "pewco" the proper name of the above bread? Are their (powce's eggs rare? Ans. The eggs of the bank swallow (Carly riparia) and the white-belied swallow (Carly riparia) amount to white-belied swallow (Carly riparia) amount to white-belied swallow (Tachy lends the leader) are pure white, unmarked by spots. Those of the former-species measure Jöin, by John, those of the latter Join, by John. The eggs of the pewce (Skyprins fuseus) measure Join, by John, Theegs of the pewce (Skyprins fuseus) measure of the pewce (Skyprins fuseus) measure of light reddish brown at the larger end. They are very common.

THE INTERNATIONAL EXCHANGE AND READING ROOM.-We announce with pleasure that there will shortly be opened in Madison Square, in this city, an institution destined to occupy a field of great and permanent usefulness. We refer to the International Exchange and Reading Room, projected by Mr. C. A. O'Rourke, proprietor of the New York City Press Association. The new enter-prise is broad and varied in its scope, but its objects are defined with unmistakable clearness, and the executive ability and thorough experience of its projector give assurances that every feature of the new institution will be put in perfect working order. In the Exchange, which will be open from 8 A.M. till midnight, will be found all the leading journals of the principal cities of the globe. This feature will probably be more complete than in any reading room in the world, for the latest issues receivable by mail will always be at hand. Not only newspapers, but the leading reviews and magazines and the latest publications dealing with business interests of all kinds will be found at the Exchange. Current general news of the day, stock, mining and produce quotations will be received there by telegraph, and promptly bulletined. Parties desiring to speculate, and at the same time avoid the turmoil of Wall street, can do so by special wires through responsible brokers. The arrival off Sandy Hook of all incoming steamers will be announced at the Exchange. Railroad, ocean steamer and steamboat directions for travelers will be furnished, and tickets sold at regular rates. Not only subscribers resident in this country, but travelers from all parts of the globe will find in the new institution facilities hitherto unattainable in New York. An agent of the Exchange will go on board all incoming steamers. Guides and interpreters will be furnished to travelers. In brief, the Exchange and Reading Room will be an important and valuable feature among the institutions of New York. The business men of the metropolis have been quick to show their appreciation of this fact, for the success of the new enterprise has been assured even on a Metropolitan clientage.

The twenty-third annual shooting festival of the New York Schuetzen Corps, Capt. George Aery, will be held at Union Hill, June 7th, 8th, and 9th. The society always offers its guests a superior entertainment. The annual shooting tournament is one of the most important events in the metropolis.

THE TEAM SELECTION.

THE Board of Directors are making a pretty kettle of fish out of the selection of the team to go to Ire land, and a great deal of dissatisfaction has grown up in consequence. Never was a simpler problem presented to the Board; but the same blundering policy which has made Creedmoor a continuous and expensive subsistence on State pap, and left it to-day more helpless and with less prospect of being self-supporting than it was five years ago, cropped out in the choice of the team; and as a result there goes- if go it does-a team to Ireland composed of men whom accident has given an elevation which a sober second thought does not approve.

The circular issued with such great to do on the 20th ult. has proven to be but a snare and a delusion, and has not been lived up to except in the most airy fashion. The result is that a gentleman representing one of the most influential clubs of the rifle shooting world, and who in his private capacity gave the first medal ever offered in a match at Creedmoor, receives a rebuff, which he very properly resents by declaring himself free from the entire crew of gun agents who go to represent America in Europe, and of the blunderers who manage them. A bit of brief history will explain. The circular, as published in FOREST AND STREAM April 22d last-and which issue, by the way, represented the circular as it was passed by the Board, before the fingers of the meddlers were seen in amendments for their own purposesprovided that any club could send such representatives as were proper to go on the team and were acceptable to the committee. Dr. Clark was so selected by the Empire Rifle Club without competition, Dr. S. I. Scott, of Washington, went through a brilliant series of contests, and won the honor of representing the Columbia Rifle Association. Capt, L. C. Bruce was selected as the representative of the Amateur Rifle Club, of New York, in a competition of two days' duration, where he defeated such marksmen as Jackson, Farrow and Fisher. The Amateur Club were prepared to furnish the financial backing to Capt. Bruce, and he himself had contributed handsomely. These three gentlemen-Clark, Scott and Bruce-were the only representatives of clubs selected for the team. The Massachusetts Rifle Association made a great

pother at first; but, with a ready excuse to cover up their retreat, saw with Yankee shrewdness a readier way of getting on to the team. Then came the selection of three men at large from the National Rifle Association. The best three in four scores were to count; but only two scores were made by Messrs, Farrow, Fisher and Rathbone, and by some hocus pocus they reported as the choice of the N. R. A., on Tuesday, the 18th, when club men were expected to be present. Then, having been defeated in the Amateur Club, and again in the open contest of the N. R. A., Capt. Jackson appears as a free lance. He, with associate marksmen from the Hub, were not the representatives of the Massachusetts Rifle Association, for that fact they were very positive in asserting. They surely had not won any right to recognition according to the circular, and with only three rightful claimants to places on the team, or six, if the quasrights of the N. R. A. representatives were to be regarded. it was the duty of the Board of Directors to fill the place vacant. In place of this, there was a three days' noisy shoot at Creedmoor. Capt. Bruce, with important business interests in town, and with a positive assurance that his rights were to be protected, did not appear to shoot beside men whom he had already defeated. Some bril liant shooting was done, with some fortunate days to do it on, and then, with the friskiness of a young colt, Capt. Bodine seemed to go back on his title of "Old Reliable, and in a sort of star chamber proceeding at Creedmoor a team was made up; a scurry was made by its members to get their names attached to a paper in which they promised to go to Ireland—they thinking, perhaps, that the paper would carry some weight in case of trouble. The rights of Capt, Bruce were quietly overlooked in the grab game of that Friday evening at Creedmoor, and the next morning's papers made public the insult which had been flung at Capt. Bruce, and through him at the club which in 1873 accepted the challenge of the Irish riflemen, and brought about pretty much all there is of longrange shooting in America.

Then came the confession of the blunder in the clumsy attempts to patch up the trouble, and in a meeting called on Tuesday atternoon last, after hatching in star chamber confab for some hours the following :-

confab for some hours the following:—
Whereas, In accordance with the condition of the circular of April 20th, issued by this Association "to the rilemen of America," asking their cooperation in getting up a tean to shoot a return match in Ireland next month, Col. John Bodine has been appointed captain, and Messrs. Brown, Scott, Clark, Farrow, Rathbone, Fisher and Jackson have justly earned their several positions as members of the team and one reserve; and Whereas. Unforeseen circumstances have prevented several of the best marksmen from complying with the requirements for positions upon the team; and Whereas, By the conditions of said circular more than one reserve can be appointed to accompany said team;

therefore Resolved, That Messrs. Bruce and Rockwell be added to the number to compose said team and reserve.

This tissue of prevarication did not help the broil, into

which the selection had drifted, in the least, Capt, Bruce, when the sop was presented to him, promptly and properly rejected it. He had won a place on the team, and did not need any apologetic resolutions to give him his own. Mr. Rockwell had distinctly said that he could not go over, and therefore seemed a fit blank to keep Capt. Bruce company on the fag end of the resolution. The representatives of the Amateur Club had acted from the start in a manner entirely in accordance with the spirit which should govern the selection of a body of experts to represent American riflemen. His absence is a real loss to the team, for while it is pretty certain to win in any case, it is difficult to get up enthusiasm over a group of marksmen where at any moment the drummer instinct may break out, and a price list switched from the pocket be thrust in the face of our host on the other side.

It was a stinging commentary on this chapter of team selection when the chairman of the Finance Committee rose in the Board, and speaking of the financial accounts of the Board, said: "I defy any man to make head or tail out of them, and any firm working with such a system of keeping its accounts would go to the wall very

Professional Riflemen.—The question of a plan for barring out professional riflemen is a growing one in rifle circles, and Col. Sanford, in the last session of the Board of Directors, proposed the following sapient rule, which of course means nothing, as the gate money is in all cases taken possession of by the Association controlling There is not money enough offered as prizes in the whole country to tempt the best marksman to its capture as a means of livelihood, and no rifle-making firm will bar off its agents from the ranges by confessing them as paid to shoot the arm. The resolutions read :-

them as paid to shoot the arm. The resolutions read:—
All matches of this Association hereafter shall be open
only to amateur riflemen, unless otherwise specified;
and amateurs only shall be allowed to compete for places
on the American International or Inter-State teams and
be organized by this Association. An amateur in rifle
shooting is one who has never entered into a competition for gate money, or who has never pursued match
shooting with the rifle as a means of livelibod, or who
has never been paid by any rifle manufacturing firm or
dealers in rifles to use said rifles in matches for the purpose of advertising or selling them.
We invite discussion of this question.

We invite discussion of this question.

Types of Anglers .- Many people are just beginning to find out that angling is one of the most artistic sports in the world. Its own inherent gentleness makes it the most refined, and although gentlewomen add by their presence to its charms, yet it does not require, as do most sports, their restraining and refining influence. "Its innocence is a feature that has commended it in all ages."

The angler has most of the cardinal virtues. He posesses the rare quality of taking the luck as it comes, good naturedly. Difficulties and disappointments stimulate instead of depressing him, for like virtue patience is its own reward. It was an angling enthusiast who said: "I did not have a positive bite but I had a glorious nibble.

The fisherman's life is made up of one grand series of disappointments. He has more of them to the season than any other person. Most of them, however, are happy ones; only enough of the miserable ones happen along to season the rest. Every sign which the angler studies. the scudding clouds, the ripple on the water, the direction of the wind, may all indicate good sport, and yet as he starts out, buoyant with hope, building high his castles in the air, he is conscious of a delightful uncertainty, which is the condiment of his recreation and increasing its attractions.

There is an element of chance about it more fascinating than the absolute certainty, but whatever comes he is never discontented with the actual. No evidence of disappointment ever lurks in his face. He has a well regulated tongue, and is never guilty of committing an assault on the English language, no matter how great the provocation or how much of a thinking he may keep up. Still, in spite of this undercurrent of uncertainty, he is a man of sublime faith. He never steps into a stream without trying to make himself believe that it is one of his lucky days! And well he needs more than a grain of faith, for ofttimes the result of his day's wading will not turn the scale at a grain or less, but he is, under every condition, a philosopher. If he cannot always command success he will at least deserve it.

We mean the fly fisherman, one who uses the lightest rod and fittest line. There are anglers who employ hooks and lines coarse enough to draw out leviathans, but they are mere fishing machines, whose legitimate business should be hauling a seine, and who have little of the spirit of the fair play that betokens the gentleman, who corns to take any unfair advantage, but is willing to give the fish some chance for thir lives.

Anglers are very much like their tackle, coarse and fine. It is the latter who has some object in going to the trout stream besides filling his creel. He likes the vigorous rise and strike, but that is not all in all. There are surrounding associations from which he derives pleasure. He is an observer, and is continually making mental note of the beauties and deformities of the ever changing pictures before him. He is a student who studies not alone to catch the fish, but also to learn their habits and characteristics. He loves to hear the merry ripple of the stream bubbling along in playful melody. He hears the choicest arias and solos and choruses from a thousand tiny throats pulsating the air. He hears the mountains echoing back the weird cry of the loon; he hears the cheerful chirp of the crickets beating time against their horny sides; the whirr of the ruffed grouse; the sleepy whispering of the leaves, and this is harmony. He see the earth gay with the spring flowers; the blue-cyed violet in its simple beauty and coquettish grace budding and blossoming at his fest, and peeping upward through the grasses at the golden buttercups, the purple pansies, the trumpet of the wild honey-suckles, the ferns growing on the silver-gray rocks, the May apple laughing in its rosy beauty, and all these are to him perfect types of loveliness.

In looking up through nature he recognizes the wonderful and beautiful creations with which the world is adorned, and basking under their influence is quickened into a devout reverence to the "Giver of every good and perfect gift." To all these the mere fishing machine gives no heed. The boulders, cushioned with moss, the rugged cliffs, seamed and serrated, grim old monarchs of the forest, ctoud capped mountains, ferns nor flowers, all tokens of divine goodness, are for him neither ennobling nor harmonizing.

MILLARD.

Beaver River Club.—The field day of the Beaver River Club, at Pittsfield, Mass., May 21st, was a very ergloyable affair. Some twenty members were present, and the afternoon was pleasantly passed in rifle practice and glass ball shooting at the range of the Riverside Club, at Pittsburg, who kindly gave the visitors permission to occupy the range, which is beautifully situated on the shore of Silver Lake, a short distance from the center.

In the evening a trout supper at the Burbank House ended the day's sport, which was much enjoyed by all present. The club voted to repeat the field day, Oct. 18th. Pittsfield is one of the most beautiful of Massachusetts towns, surrounded by mountains interspersed with beautiful lakes and an air invigorating and healthgiving. The sportsmen of Pittsburg and the surrounding towns of Adams and North Adams are gentlemen in every sense of the word, and any sportsman who goes there will be sure of a hearty welcome. The President of the club, Mr. A. L. Phillips, was unfortunately detained by sickness in his family, much to the regret of the other members. Eleven new members were admitted, making now thirty-five in all.

[From a Special Correspondent.] OUR WESTERN LETTER.

DENVER, Col., May 11th.

PLEASANT as the interior of the traveling coaches are which bring one out to these regions, the outside furnishes its due share of pleasure. As the miner in his digging sinks down through successive strata of rocks, so the journey overland from New York presents in turn its different phases of land, life and character. Each phase is a surprise and a matter of interest, especially if the traveler has never been before far west from the Atlantic coast. One's sensations, indeed, are very peculiar in this respect. The Eastern man has heard and read a great deal about the "Far West" and the "Great West," and has gained an idea that there is a great deal to the country beyond what can be seen east of the Alleghany range, and he understands very well that the overland route to the Rocky Mountains is not far short of the distance to Liverpool, and so he may think that he has an idea of the West. But he will find, when he tries the journey, that his ideas have been very small compared with the reality. It is difficult enough to get a notion of the vastness of the ocean, without actually crossing it. It is still harder to realize what a vastness you are going into when you start out overland across the plains. After one has been aboard the train for forty-eight hours, in constant motion, the feeling is that it is about time to come to salt water again : yet the traveler will then have got merely to Iowa. It is a strange feeling, which one can not shake off, that the country is large beyond all proportion, and that the United States still has a future before it.

But if the mere distance produces this effect, the varied richness of the country through which one passes impresses one still more strongly. Across New Jersey, rich in her market-gardening, her mines and her large manufactories, and dotted with the mixed tints of suburban villages—an extension at arm's length, as it were, of the wealth of the metropolis—until it reaches these finger-ends of suburban towns, and drops off and enriches the spots where it falls. Across New Jersey, with these sources of wealth and these adornments, one strikes a new money center, the point of entrance to fresh wealth of nature and new fields of industry. Pennsylvania is certainly a State by herself. You can't help knowing when you enter Pennsylvania, and when you leave it. Rugged and burrowed with mines—that is the impression one gets of Pennsylvania, "Nothing ficen be

more interesting than the railroad ride which takes the traveler over the mountains. Around the famous Horse shoe Bend is a view both of nature and of engineering, which rivals the Semmering. Down the grade on the other side we fly with a speed that nothing but the best of tracks and road-beds could stand. Down into valleys, dashing around curves, leaving brown clayey banks on one hand and sloping hillsides on the other, rattling over switches, swimming past mining stations with their jeering boys, one gets down at last upon the entrance to the famous city of smoke, almost before one is aware that the mountains have been left behind. It must be admitted that Pittsburg is unrivalled for smoke; "but there is money in it," and that is enough for the American; and it is the province of the tourist and the sightseer; indeed, if he will get a just and true idea of the places he visits, to look through this veil whether it be of smoke, as at Pittsburg, or of barrenness, desolate surroundings, dust, unhandsome buildings, or what not, a veil that surrounds many a place where the happiness and well-being of mankind is being contributed to by mining, milling, agriculture, and by keeping in supplies the tough men who have moved West and gradually added States to the Union. It is well if the tourist's eye can pierce to the substance of these places; and if it does, he will see a beautiful face behind the disguising veil, and he will come to rank places with forbidding aspects among the fair and good things of the earth, because they are doing good. A good deal of the beauty of Western places is of this sort. The station may look lonely, and perhaps you would not like to be dropped there to get your living. But all about, and between such stations, there is plenty of evidence that there is a productive earth, and here the energy man has bent over the earth and made it yield and add to the riches of the States. These uninviting, sparsely settled places, have brought comfort and plenty to many a home where there has been pinching and want before. So the West has its beauty, even where it is rough.

But I would be far from holding out that the West is

without beauty that cannot be seen readily by the eye, and has to be studied out and reflected upon before it becomes apparent to the mind. The beauty of the West is, if I may say so, in general wider than beauty which belongs to the landscapes of the East. Through Ohio one passes over long, rolling reaches of mellow-looking fields—fields which afford a long, even horizon for the sun to set behind. There is nothing to narrow the scene; there are no sides to the stage at which you are looking. So in Illinois, only more level. Vast rich flats make the view. As one draws into Iowa the soil gets to looking blacker, the ground rolls more. and rather startling round hills of loam, with no sign of rock, rise up, stay a few minutes, and fall away, as we Wet places appear and disappear; the go speeding on, soil is black; wild birds are seen in large numbers; ducks go scurrying away across the patches of water from our advancing train, and geese keep up a steady flight somewhither off in the sky. The quantity of game is something of a sight to the Eastern sportsman.

But the most startling revelation is reserved for him who goes West beyond Omaha. Once across the Mis-souri, the great plains are struck. Everybody in the East has heard of "crossing the plains," but I doubt if anyone without seeing them can form an idea of the plains, or what it is (or rather was) to cross them. The want of fences is one of the first things that the Eastern man feels. Where are they gone to? Are we never coming to one? Surely there must be a limit to this field. field. Yes, there is-two or three days' travel beyond this-a month's travel in the old days, before steam went over the plains. Where is the owner? Oh, he may be fifty miles away from here, on no man's land, rounding up his cattle for the spring branding! Perhaps, though, that is he! Where? Why, coming horseback down the hill over vouder. But I see no man nor horse. Right here! Oh, that black speck, you mean? I didn't know that was a man on horseback. Why, I didn't think that hill was so far away, but I see now it is a good deal further than it looks; and now I can see the black speck moving, and see it go up and down, on the canter! So the "Tenderfoot" thinks (but, if he is wise, does not utter), and watches and watches the undulating black speck cantering nearer and nearer, but never near enough to distinguish man from horse, until the train has finally left behind, out of view, the solitary horseman, with his hopes and purposes and wishes-much as one sees at sea a sail rise over the horizon, hang there awhile, and disappear-half awe-inspiring in its unknown mission. LEX.

Pennsylvania Field Trials.—At the meeting of the Pennsylvania State Association at New Brighton, Pa., next Tuesday, it is proposed to discuss the plan of holding a State field trial of dogs. It is to be hoped that this project will meet the favor it certainly deserves. Local trials bring out into the field a great many dogs which do not and cannot appear at the large, distant trials of the same character. They are influential in developing and directing the taste for field sports, and in demonstrating a right understanding of the good points in a dog.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME AND FISH DIRECTORY.

In sending reports for the Forest and Stream Directory to Game and Fish Resorts, our correspondents are requested to give the following purticulars, with such other information as they may deem of value: State, Town, County; means of necess; Hotel and other accommodations; Game and its Season; Fish and Its Season; Boats, Guides, etc., Name of person to address.

-Address all communications to "Forest and Stream Publishing Company, New York."

THE STATE CONVENTION.

SENECA FALLS, N. Y., May 26th.

THE twenty-second annual convention of the New York State Association for the Protection of Fish and Game was held last evening at Daniel's Hall, Horace Silsby, President, in the chair. The delegates were welcomed by Mr. J. D. Pollard, of the Seneca Gun Club, whose speech was received with great applause. The following clubs were represented: Adirondack Club, of Adams; Audubon Club, of Rochester; Central City, of Syracuse; Corning Club, of Corning; Dansville Club, of Dansville; East Buffalo Shooting Club; Forrester Club, of Buffalo; Farmers' Village Club; Genesee Club, of Irondequoit; Jordan Club, of Jordan; Jefferson Sportsman's Club, of Watertown; Leatherstocking Club, of Oswego; Lewis County Club, of Lowville; Leroy Club, of Leroy; Monroe Club, of Rochester; Cazenovia Club; Niagara Falls Club; Ontario County Club, of Clifton Springs; Onondaga County Club, of Syracuse; Phœnix Club, of Seneca Falls; Skancateles Club; Seneca Gun Club, of Seneca Falls; Steuben Club, of Wayland; Wayne County Club, of Clyde ; Waterloo Club, of Waterterloo; Onondaga County Fishing Club, of Syracuse; Rome Club, of Rome; Spencer Club, of Lyons; Forrester Club, of Penn Yan; Forest and Stream, of Akron; Dean Richmond Club, Batavia; Queen City, of Buffalo; Fountain Gun Club, of Brooklyn; Brooklyn, Gun Club; Long Island Club, of Brooklyn.

Applications were received from the following clubs for admission to the convention: Garden City Club, of Hempstead; Forest City Shooting Club, of Ithaca; Fulton Gun Club, of New York; Washington Gun Club, of Brooklyn; Phemix Gun Club, of Brooklyn; Nonpareil Sporting Club, of Brooklyn; Nassau Gun Club, of Jamaica, Long Island; Forrester Club, of Brooklyn; Long Island Sportsmen's Association; Rochester Gun Club, of Rochester. All the clubs nominated were elected members of the Association.

It was decided to hold the convention of 1881 at Brooklyn, under the auspices of the Long Island Sportsmen's Association. The following officers were elected:— President, Abel Crook, of Brooklyn; First Vice-Presi-

President, Abel Crook, of Brooklyn; First Vice-President, Charles W. Havemeyer, of Hempstead; Second Vice-President, G. T. Case, of Seneca Falls (Phoenix Club); Recording Secretary, John B. Sage, of Buffalo; Corresponding Secretary, Nathaniel B. Cook, of Brooklyn; Treasurer, W. J. Babcock, of Rochester.

The programme of the shooting to-day was as follows: -Contest No. 1. At 8 o'clock A.M. sharp, class shoot 10 single birds; entrance fee \$5. Contest No. 2, at 2 o'clock sharp P.M., class shoot 10 single birds. In the first contest Peter Tompkins, of the Dean Richmond Club, won the first prize by killing 15 birds straight. The second prize was won by Edward Hudson of the Onondaga Club of Syracuse, by killing 19 out of 20, R. J. Richardson, of the Jefferson County Club, of Watertown, took the third with a score of 18 out of 20. Peter Hines, of the Audubon Club, of Buffalo, took the fourth, the score being 13 out of 20. The general score includes the ties, and 110 men stepped to the front in this contest. The birds were all wild, and good flyers. The second contest commenced at 3.30 o'clock this afternoon. The main score was completed and the first tie shot off before dark, Hiram Twist, of the Seneca Gun Club, winning the first prize. The balance of the ties will be shot off in the morning.

Massaciusetts—Chelsea, May 15th.—The Suffolk Sportsman Club has been formed with the following officers: President, John K. Hodgdon; Vice-Presidents, Charles E. Bearse and Wilbur L. Slade: Secretary, William R. Swan: Treasurer, Noah Blanchard. Executive Committee—Joseph B. Ferwick, Joseph S. Hatch, Wesley Abbott and Frank A. Magee. The club proposes to have a building and shooting grounds at the rear of Powderhorn Hill.

Pennsylvania Association.—Wilkesbarre, Pa., May 15th.—I desire to call the attention of the sportsmen of Pennsylvania to the fact that on June 1st, 1880. "The Pennsylvania State Association for Protection of Game and Fish," will hold its next annual meeting at New Brighton, Pa. At this meeting the matter of holding a State field trial will be taken under consideration. Clubs are invited to send delegates, and it is hoped they will do so. There will, on the following day, be a shoot for a club medal, also one individual prize for best score. Open only to teams from clubs belonging to the State Association.

B. F. DORRANCE, President.

ALABAMA STATE ASSOCIATION.—At a meeting held at the rooms of the Gulf City Gun Club, May 14th, a State Sportsmen's Association was organized, having for its

object the enforcement of the laws in regard to the preservation of game, including birds, fish and animals. Members of the following gun clubs were present: W. K. Jones, of the Excelsior and Montgomery clubs; J. E. Skinner, of the same; W. L. Hutchings, of the Excelsior Club of Montgomery, and the following members of the Gulf City Gun Club; F. P. Davis, C. W. Leelie, P. Rauchenstein, M. F. Kirkbride, Dr. J. C. Turner, Dr. T. S. Scales, W. H. Williamson, H. P. Vass, W. B. Holt, G. W. Tunstall, Dr. C. C. Sherrard, J. S. Alexander, J. C. Bush, E. Carre, Ceoli Fleming and W. A. Goodall.

The following officers were elected for the ensuing year: President, Dr. T. S. Scales; First Vice-President, W. K. Jones, of Montgomery; Recording Secretary, H. C. Semple, of Montgomery; Treasurer, Dr. C. C. Sherrard, of Mobile; J. E. Skinner, of Montgomery; T. C. C. Sherrard, of Mobile; J. E. Skinner, of Montgomery; W. Tunstall, of Mobile; J. E. Skinner, of Montgomery; H. P. Vass, of Mobile; H. C. Raudolph, V. M. Elnore, of Montgomery; Law Committee—Hon. O. J. Semmes, of Mobile; F. C. Raudolph, V. M. Elnore, of Montgomery; W. G. Boyles, of Mobile; H. C. Semple, of Montgomery; W. G. Boyles, of Mobile; H. C. Semple, of Montgomery; W. G. Boyles, of Mobile; H. C. Semple, of Montgomery; W. G. Boyles, of Mobile; H. C. Semple, of Montgomery; W. G. Boyles, of Mobile; H. C. Semple, of Montgomery; We dake great pleasure in noting this movement on the

We take great pleasure in noting this movement on the part of Alabama sportsmen, and shall hope to chronicle good work done by the new association.

good work done by the new association.

CAPTURE OF AN OWL—Alexandria, Ohio, May 18th.—This morning, having gone to the woods to look for a stray sheep, my setter dog Captain ran ahead, and either flushed from the ground, or from a tree, what I took to be a large hawk with a black snake in its claws. It alighted on a large sycamore, and upon a nearer view I discovered it to be an owl with a steel trap and chain attached to one foot. I returned to the house and procured my gun, intent upon its capture. When I reached the tree it had gone, but upon a short search I discovered it on a pile of rails, with one end of the chain fast. I secured it alive, and how have it a prisoner in the corn-crib, minus the trap. It is a very large specimen and very fierce. It does not seem to be any worse for its adventure. When, where and how long it had been in the trap I cannot answer.

Oreon—Eugene City.—The shooting is over for the

trap. It is a very large specimen and very fierce. It does not seem to be any worse for its adventure. When, where and how long it had been in the trap I cannot answer.

Okegon—Eugene City.—The shooting is over for the spring, and our breech loaders, well oiled, are reposing in their cases. The last of the geese winged their way toward the North (24th ult.), and it was any good fortune to be with them on that day, when eight fat Canada geese were bagged. The modus operandi of shooting them in April is as follows: When the gunner has discovered a flock, which are generally hungry and tired on account of their long flight from the South, he gradually appreaches them with a horse, and if he is up to the business, and keeps well out of sight behind his equine companion, he often gets within forty yards of the flock, and then with a good gun, and with cartridges loaded with BB shot, great have is made among them. Mountain grouse are extensively hunted here in the spring, and by their "hooting" may be easily found and shot. Although it is almost equal to turkey-hunting, as they are a large bird and strong on wing, yet their flesh tastes strongly of fir, which flat great a delicate eating as rulled grouse. A sportsmen's elub in this place is in a flourishing condition, and will endeavor to have the game law amended. As it now stands, there might as well be no game law, for it contains a provision allowing any one kilning game at all seasons of the year, if it be for his own consumption.

The ATTARAPAS REGION OF LOUISIANA.—New Orleans. April Uth.—As the Attakapas region of Louisiana and its flue game resources appear not to have been represented in your valuable paper, I shall endeavor to describe the country and its advantages to the sportsman. This region has but recently been rendered accessible by means of the Louisana and Western Railroad, which will place it in daily connection with New Orleans. It occupies the southwestern portion of the State, and most of the parishes of Vermillion, Lafayette, St. Landry and Ca

TRAP-SHOOTING.

Editor Forest and Stream:—
The sontimentality which characterizes the articles in your issue of the 22d, by "De La," and which is pointedly and equalchedly answered by "Knowles" in the succeeding week's paper, must have its inception from one of two causes, either its authorinever about bird out of a trap, and with no experience thus volcemently disclaims against it, or he has become misauthropic from having gotten nix out of his first ten, and sours on the whole thing, after the manner of the fox and the grapes.

The proposition that "De L." advances of "tailless birds, 21 yards," and other pet terms are the mere incoherences of the same theory. Were he to add 5 traps, 5 yards spart, handicap rises to 31 yards, and instead of 21 yards, make it as it frequently, 69 yards in fact, use of second barrel, and with a handsome prize depending on the result, it would be a truer statement of the facts as they exist at every march.

I thank "Knowles" for takking up the endgels in our behalf. Isay "our," for I believe him to be one of our "Gulld," who would never wantonly practice crucity to one of God's creatures, nor have a thought incompatible with the instincts of a true sportsman.

sportsman.
"De L." looks back to the time when great flocks of the Ectoplets migratorias visited him semi-annually. Bevalually, allow their allowed control of their al

member that with the, forests lessened rains decrease, and wild pigeons forsake their haunts with the remayal of the timber and their food? This would seem to be an unanswerable reason why he can't get any more of that 'pure unadulterated sport,' which I shrewdly suspect to have been with a smooth-bore musket, onehalf pint shot and four fingers of powder.

"De L." errs in ascribing to trap-shooting the decrease in birds "De L." errs in ascribing to trap-shooting the decrease in birds. The suggestion that there is any decrease in the annual flight of wild pixcons is absurd; their fecundity is marvelous; it seems as if they were created by a kind Providence especially for the demand. Again, "De L." is inconsistent even by his own figures. The totals he gives show dead birds to be only about 17 per cont. The totals he gives show dead birds to be only about 71 per cent, of the whole number shot at, leaving 29 per cent, for propagation. Is there any living creature that will not theire on such a residue for raising a posterity? That part of "De L's" article which gives usighas balls for wild pigeons has its simile where one who asked for bread was offered a stone. "Knowles" hits it exactly when be says: "The problem being solved, one tires of it." Let me add, it is like Scotch sauff, one good pinch is enough. Any apprehenson, I thick, of the prepetuity of the wild pigeon being limited or affected by trap-shooting is groundless. The only fear is that each year, the roosts being farther from us, it costs more tog et them here. Our State shoots will have to find some substitute. What shall it be?

En Garde.

SHOOTING MATCHES.

MASSACHUSETTS.—Worcester, May 21st.—In the glass ball shooting match, at the grounds of the Sportsman's Club, yesterday, between Mr. William H. Perry, of this city, and Mr. George Carey, of Providence, 100 balls, from a rotary trap, 18 yards rise, Carey started in finely, and broke over 30 balls without a miss, while Perry failed to hit 4 before his first two dozen were sprung. Perry then settled down to his usual steady work, and missed but 4 more in the La, closing with a score of 28 to Carey's 88.

Holliston, May 20th.—At the glass ball match last week the following scores were made: A. Leland, 2 lin 30; Frank Cass, 20 in 32; John Whitney, 20 in 39; W. H. Horton, I'll 25. The club goes to Milford Mny 23th, to shoot with the Milford Club.

NATICE RE. COCHITUATE.—The Natick sportsmen visited Cochi-

NATICE 28. COCHITUATE .- The Natick sportsmen visited Cochi-NATICE ES. COCHITUATE.—The Natick sportsmen visited Cochi-tuate on May 234 and bad the third match shoot with that club for the "broom," which has been closely contested for in the two pre-vious shoots at Natick. The afternoon was fine. There were up-ward of 308 spectators on the field, including a large number of ladies. The shooting was at 10 rotary at 18 yards rise and 5 double. Following is the score:— COCHITUATE.

Rotaru. Double. Total.

New Junsery—Bergen Point, May 18th.—First of a series of seven matches by the Recreation Gun Club, of Bergen Point, for first and second gold medals. The first goes to the winner of the greatest number of matches; the second goes to the one who breaks the greatest number of glass balls during the season, aside from the winner of the first medal. Mole revolving trup; 15 class balls; 18 yards rise; club rules:—

Moore took first medal, Wilmerding second.

Vincentown, N. J., May 19th.—Members of the Coaxen Glass Ball

Club had a delightful shoot here to-day; Card traps; 18 yards

It got too dark, so the shooting was posipoued until next week, Friday, when I will give you the results. Mr. Pierson is a one-armed man, and can't be beat for money.

D. HOWARD DOWDELL.

CAPITAL CITY GUN CLUB .- Washington, D. C., May 24th .- The fourth march for two gold medals was shot this aftermoon, having been postponed from Saturday on account of rain. As will be seen, the first medal was again won by 40 straight balls, this time by Mr. T. E. King, and second medal by 30 out of 40, by Mr. Mills. The whole shooting in the last two matches has averaged over 18 balls out of 20, and as we are mostly amateurs we think we are doing some creditable shooting. Card rotary trap:—

GULF CITY GUN CLUB.

THE pigeon shooting tournament of the Gulf City Gun Club, THE pigeon shooting tournament of the Gulf City Gun Ciut, of Mobile, Alm, May Jath, 4th and 16th, was not so largely attended as it would have been had the tournament been held on the days previously announced, and had the weather been more favorable. As it was, the meeting was characterized by much thorough enjoyment, and both home men and visitors were nuch pleased at the uniform good feeling existing throughout the three days of the contest.

Among the sportemen from abroad were: Mr. W. W. Scales, of Starksville, Miss.; Mr. C. M. Scales, of Artesia, Miss.; Mr. S. S. Scales, of Brooksville, Miss.; Messra, Jones and Hutchings, of Montgomery, and Messrs. LoBreton, Cousin, Buckley, Randiett and Skannall, of New Orleans.

RANGE AND GALLERY.

The Selection of the Irish Team.—The last week was a busy one at Creedmoor, for beside the regular all comers matches at short and mid-ranges, three days were given up to shooting at long range by those who were seeking places on the team to represent America in Ireland during this summer. Three days were given up to this, and on one of the days, May 18th, the annual competition for the Leech cup took place. This cup, it will be recalled, was left in America under the care of the American Rifle Club by Major Leech, and since 1875 it has been the emblem of long-range individual championship. During succeeding years Col. Gildersleeve, Ool. Bodine, Major Jewell, I. L. Allen and Frank Hyde have each of them in turn beld the prize, and last year J. S Summer, the little champion of Walnut IIII, near Boston, came down and took it from a field of Now Yorkers. It was a day for high scores, and the twenty-six men who completed their scores, did not count a ringle wretched score, and never before in the history of modern ride shooting has a case been known where go large a number of excellent scores have been shown in a single wratch. The announcement that seventeen of the marksmen exceeded 200 points each out of the possible 225 tells the story of the curred excellence. Except for something in the nature of acci-THE SELECTION OF THE IRISH TEAM.-The last week was a

nt, there should have been several more in the list, for Aller thbone, Brown and Morse are not men used to stay in the nine Authorie, Brown and Morse are not men used to stay in the nine.

s, when other men at the dring points are getting peat the 200

oint. It will be seen that perfect scores were made in two inauces, and at two ranges. Jackson's 215 with a miss is excess

naily fine, the goose egg coming from a defective bullet. Colddine showed that he had lost none of his power by running up spoints, but his "outer" is the first one more virhing in the line of or outer. The rifles used were various, and show that in this aberturent our mechanics have not forgotten their cunning. The filterore of the leading men in this remarkable match stood:

MASSACHUSETTS-Boston, May 22d.-The continued competition Massacritistics—Boston, May 224.—The continued competition in Everybody's match took place, to-day, at Wainut Hill. The attendance was not so large as usual, owing, no doubt, to the great amount of shooting done last week at the several ranges. The day proved one of the best of the senson, although exceedingly warm. The wind came from the south, blowing up the range very "Raby," and indicating, during most of the shooting, 6 o'clock. No fault could be found with the light the sun being obscured during most of the trial. There were thirty-nine entries in the match.

J. Nichols.
C. R. Griffing.

MAMMOTH RIFLE GALLERY.—Boston, May 21st.—The third week in the All-Comers' Rifle Match at this favorite resort has shown in the All-Colleger Rule alkerte at this recover reserving segments some very fine shooting. Mr. W. H. Harrison heads the list with 199 out of a possible 200, closely followed by Mr. E. F. Richardson and Mr. J. Merrill with 197 each, and Mr. Frank Holling in the order named. The gallery has lately been reflitted with new iron targets; the old ones, having been in service form with new front targets; the bit ones, having occar in service four years, were badly worn, and the rilies have been relited with new adjustable front sights, making this gallery in perfect condition for fine shooting. The All-Comer's Italie Match will close on the ovening of May 31st, and on Tucsday, June 1st, will commence a new match (to haugurate the summer season), called the Excelsion. Rifle Match, with ten cash prizes, amounting to \$50, divided as

B. F. Sawyer ... 2 3 5 5 3 3 4 5 4 4—38 MAMERMEN FOR AUSTRIA.—Mr. Hugo Fritesh, Austrian Consult forwards to us the appended address of the Austrian Rittlemen and Sharpshotters Society, directed to the marksmen of America, extending them a cordial invitation to compete in the contest to be held in Vienna between the 17th and 24th of July, where and when will be formally celebrated the twenty-fifth anniversary of the Consultation of the Consul when will be something teneror and the foundation of the Society of Austrian Sharpshooters. The address should draw out an affirmative response from some of our crack Schuotzen men. It reads:—

crack Schuotzen men. It reads:—
American Fellow Shootzers: Twelve years have clapsed since we called upon you to take part in a contest with the arms you wielded so well in Vienna, which was then the seat of the third German shooting festival. Although the riflemen who crossed the ocean to come to us were but few, they were heartily welcomed. Between the 17th and 21th of July the capital on the shore of the Danube will celebrate the foundation of the Austrain Shooting banube will celebrate the foundation of the Austrain Shooting us to the with us for the prizes offered. There is nothing will please us so well as to welcome once more the American Danner, with its stars and stripes. Vienma's hospitality will then be put to the test by those who join us in this contest. What trouble the long voyage across the ocean may give you, we will try to make up consider it a great homor to march side by side with you in the festive procession.

CREEDMOOR FOR JUNE.

ME competitions upon the range at Creedmoor, during the

I month of June, are announced as follows:—
Wednesday, 2d.—The Remington Shot, Gun Match; ninth com-Wednesday, 2d.—The Remingrion Shot, Guu Match; ninth competition; open to members N. R. A.; rith and position, any; 800, 900 and 1,000 yards; rounds, 15 at each distance; competitors not to be coached in any way. Prize of \$300 in gold; open to all comers; rifles, any Remington breech-loader, must be loaded at the breech, with cartridges as furnished from the factory; 900 and 1,000 yards; rounds, 20 at each \$20 turnished from the factory; 900 and 1,000 yards; rounds, 20 at each \$20 turnished from the factory; 900 and 1,000 yards; rounds, 20 at each \$20 turnished from the factory; 100 and 1,000 yards; rounds, 20 at each \$20 turnished from the factory; 100 and 1,000 yards; 100 factors and 100 yards; 100 factors and 100 yards; 100 factors and 100 yards; 100 factors and 100 yards; 100 factors and 100 yards; 100 factors and 100 yards; 100 yards; 100 factors and 100 yards; 100 ya

Wednesday, 232.—Any Rifle Match; without restriction as to weight of rifle. Individual—To begin at 11.29 A.M. and close at 230 P.M. Open to everybody. (Members of any military or naval organization, or of any Schuetzon corps or society in uniform will be entitled to excursion transportation over the L.I. Rail-wall on the first forther than the contraction of the contracti road on this day for thirty cents-one-half of the regular rate). 200 yards; position, standing, off-band; any rifle, as above; seven shots each entry; entrance fee, to cents; re-entries unlimited, but only the highest score to count, and no re-entry to be fired until first or preceding entry has been completed. Prizes—To the highest score, cash or trophy, \$15, and a total of twenty prizes, \$108. Team.—To begin at 3 r.m. and close at 5.30 r.m. Open to teams of four men from any military or naval organization, Schuetzen corps or rifle club. 200 yards; position, standing, off-band; any rifle, as in individual competition; seven shots each man, each entry; entrance fee, \$4 for each team; re-ontries un-limited, but only the highest score to count, and no re-entry to be fired until first or preceding entry has been completed. No person to shoot in more than one team. Prizes—To the highest team score, cash or trophy, \$25, and a total of eight prizes, valued at \$100. Pool targets at 200 yards will be opened at 9.A.M., and remain open all day. Pool telects will be sold at ten cente scah, and lifty per cent. of receipts will be divided in the evening equally among those making bullseyes.

Saturday, 20th.—Weeliy Long-Range Subscription Match for intil first or preceding entry has been completed. Prizes-To the

among those making bulleyes.

Saturday, 28th.—Weekly Long-Range Subscription Match for June; fourth competition. June 0ff-Hand Te-m Match; open to teams of four men from any rifle club or association, or military organization in the United States; rifles, any within the rules; 100, 200 and 300 yarls; five shots per man at each allowed, but only the highest score to count; teams, all members of which shoot military rifles, will receive an allow-ance of one point per man at each distance; total, 12 points Remington Rifle Match; tonth competition; open to members N. R. A.; 200 yards; rounds, ten; any rifle. Handcap; 1. Any sompetitor using other than a "military" rifle, four points. 2. Competitors who have in any N. R. A. anothly or other match at Creedmoor made at 220 yards (a), with a sporting rifle, two points over an average of centers (if using such a rifle in this match), two points; (b), with a military rifle, over an average of centers (if using such a rifle, two points.

We Will Match (formerly National Guardeman Match); open only to members of the National Guard of any State; 200 and 500 yards; seven shots at each; weapon, the authorized military rifle in use by the organization of which the competition: a member.

bor. Wednesday, 50th.—The Secretary's Match; third competition. Open to everybody; 200 and 500 yards; five shots at each; position, standing at 200 yards; at 500 yards, any, without artificial rest; rille, any of the following: Winchester military, Peabody-Martlin military, Sharen military, Sharen military, Martlini-Henry military, Sharen military, Springfield military. military

-The Amateur Ritle Club announce the following matches: —The Amsteur Rifle Cub announce the following materies:

Wednesday, 2d.—First competition for a Remington Creedmoor
rifle, new model; members A. R. C.; 800, 800 and 1,000 yards; fifteen shots each distance; to be shot for twice each month, and to teen shots each distance; to be shot for twice each month, and to be awarded to that competitor making the highest aggregate score of any three competitions; at each competition fifty per cent, of entrance money will be divided equally among the high-est four competitors. At the competition next preceding the Inter-State Long-Range-Match of the N. R. A., the team of four men to represent this club shall be determined by the order of merit of their aggregate scores made in any three competitions up to that time.

**Wednesday, 10th.—Sixth competition for short-range badge; 200 yards; iffteen shots; any ride; position, standing; entrance fee, sevent-rance cuts.

eventy-flye cents.

wednesday, 16th.—Second competition for N. R. A. bronze medal; 700 yards; second-class target; fifteen shots and two sighting shots. Wednesday, 23d.—Second competition for a Remington Creed-

moor rifle: conditions as announced.

Hachting and Canoeing.

Address all communications to "Forest and Stream Publishing Company, New York."

YACRTS FOR SALE .- We call attention to our advertising co 1transfor which yacht property is often offered for sale. Owing to our circulation among yachtsmen being larger than that of all other publications combined, this journal offers the best medium for the purchase and sale of yachts.

NATIONAL YACHTING ASSOCIATION.—Meeting of the provisional committee of five, Saturday, May 29th, at the rooms of the Republican Club, Eighth avenue and Thirty-fourth street, by order of the Chairman, David Hall Rice.

YACHTING NEWS.

THE New HARBOR.—The Atlantic Y, C. is displaying something like the enterprise we like to see. It is alive and kicking. Not a mero outline organization, like many another large club, sufficient unto themselves in their sleepy sociusion. The fact flying the white and red diagonal is growing apace, and now numbers nearly flifty yachts; among them the smartest of their toen use had. The new club bouse, with surrounding grounds and the breakwater, are now in the hands of contractors, and the work will be pushed. The property is located at the foot of Fifty-sixh street, South Brocklyn, and has a water front of 375 feet, extending back to First avenue, about the same distance and 1,600 feet out in the bay to the pier headline. A long breakwater will be built 600 feet from shore, affording a fine sheltered harbor for smaller craft, with excellent holding ground. The with a will be built 800 feet from shore, affording a fine sheltered hurbor for smaller craft, with excellent holding ground. The Bay Ridge ferry and the cars from the Brooklyn side afford communication. There is little doubt but what the neighborhood of Bays Ridge Pier will be chosen for the moorings of the great yacht feets of the future, as New York Bay is very poorly off for other harbors. And when the day comes, that the forest of masts off the pier is as thick as they are off Cowes, and the sun cannot be seen for their number, and skippers have to hunt for their craft in the crowd, then will the Atlantics reap their reward, and gather under their colors what may become the finest and largest fleet of yachts that ever owed allegiance to one set of flag officers. They have the chance, let us see if they know how to make the most of it. While one club has been debating the advisability of resolving themselves into a folly good spree, and another has been making rather faint-hearts dolly grood spree, and another has been making rather faint-hearts delivers at recurring a club houge or headquatters, and a May; second competition. June On-Hand Individual Match; second competition.

Wednesday, 16th.—Remington Shot Gun Match. Isallard Riffe Match; tenth competition; open to all convers; winners to be handicapped one point for each time won; 100 and 200 yards; any riffe; rounds, seven at each; no cleaning allowed between either shots or distances. The Afford Match. Winchester Hild Match Prize, a Winchester repeating riffe. At the running deer target; 100 yards; any riffe, but sights to be over the center of the barrel, and but one shot to be allowed in each run.

Saturday, 12th.—Weekly Long-Range Subscription Match for June; third competition. June On-Hand Individual Match: third competition. third has almost ceased to exist, members of the A. Y. C. clapped astopper or talk, and lent a hand and a dollar to win the lead they have taken, and they riohly deserve the success that for years lay at the feet of others too fait-wient to bend their backs, too listless to brace around to the fair wind which has blown so often in their favor.

FIGUREHEAD COMMODORES.—There are plenty of them around, because they don't know their business; but the San Francisco Y. C. has not got one of that sort. During the April cruise sundry members disregarded the Commodore's instructions and signals whereupon the latter promptly tendered his resignation. Good flag officers being extremely rare, the club requested Commodore Harrison to reconsider his intentions. Should be order his swallow-tail lowered, it would be a serious loss to the club

THE ISABEL.-This little "cat-yawl," belonging to Mr. J. Bu-This isability in the "cat-yaw, belonging to an observable of chann Henry, Stonington, Conn., has been found to work exceedingly well under all three sails, as a cat under mainsail only, or under lib and nizzen, with the mainsail stowed. She is a modification of the San Francisco yawl.

LANCASHIRE WITCH.—The steam yaeht, Lancashire Witch, on which Sir Thomas Hesketh is making an extended cruise around the world, has left San Francisco and gone to Puget Sound, thence to Victoria, British Columbia. After a cruise on those waters the yacht will take the inside passage to the north, and cruise ig the Alaskan coast for a time. Sir Thom Francisco by the end of July, so as to join Yacht Club fleet, on its southern coast cruise in August. are going to Santa Cruz, Monterey, etc., in squadron for a weel or so, and the Lancashire Witch will join company. With her steam power, she will be handy to have along in case of calms.

KEELS FOR ROUGH WATER.-The schooner yacht Pearl, of the San Francisco Yacht Club, has had her centerboard remove a keel substituted. She has been overhauled and coppered, pre-paratory to a voyage to Nicaragua, Central America, with her new owner and family on board. She came off the ways on the 1st of May, and as soon as her supplies are on board will be ready for So even San Francisco bows to the keel.

YACHTING ON THE PACIFIC .- Our correspondent sends us the TACKING ON THE FACTOR—OUT COTES PRODUCTE SOINS IS THE FACTOR. THE SCHOOL STATE OF THE vacht has been thoroughly overhauled and refitted during the called the Gaviota (sea-gull). She is a dandy little yacht, and will be the smallest of the S. F. Y. C. fleet when her owner joins the be the smallest of the S. F. Y. C. flost when her owner joins the club, as he proposes to do. The Gavida has proved very fast... The 33ft. cabin sloop Myrtle, built by William Stone last fall, has been purchased by two young gentlemen, who will soon fly the S. F. Y. C. burgee at the masthead. She is a good deep boat, with S. F. 1. C. burgee at the massician. Size is a good deep look, with head room in cabin, plenty of freeboard, and is altogether affice, weatherly little craft.....The little Bernudin sloop Lively, the champion of the smaller yaults of the S. F. Y. C., has changed hands. She now belongs to Mr. Pennel, a member of the club, her former owner, Mr. Williams, having taken so kindly to sait water as to have gone cruising to the Sandwich Islands on a deep

LAUNCHED .- From the yard of Piepgrass, Greenpoint, May Bith, the steam yacht Julie, for Edward Bailbach, of Newark. The model was furnished by the builder. Her midship section is of the "peg-top" variety, clean run, but rather full forward. She is fitted with the usual cabin and pilot houses on deck, has a ruking stem, stump bowsprit and a cutter stern, and is rigged as a Length 72ft., beam 13ft., depth 6ft. She has been en-Clute Bros. & Co., Schenectady, N. Y., and they have d 14 knots. Compound engines 18 and 11in., cylinders guaranteed 14 knots. Compound engines 18 and 11½in., 10in, stroke, boiler 6ft. 6in. in diam., and 6ft. 9in. long, of motive type, 150 lbs. working pressure. Propellor 4ft. 6in. in diam., and 8ft. pitch, from which it is evident that the engineers diam, and sit, pice, from which it is evident that the eigeneers have departed from ordinary practice, as the pitch is excessive compared to the diameter. In England experiment has shown that small pitch and high velocity of engine is best adapted for great speed. It remains to be seen whether the new experiment will be successful. We trust that faith in this yacht's speed will not be bot should she fall with her present wheel, but that other wheels be tried in succession. That there is some particular wheel best suited to every form of hull is now universally accepted among engineers, and as much as 25 per cent, may be lost or gained on this score.

SIDE-WHEEL STEAM YACHT.-What we believe to be the first bona fide side-wheel steam yacht in America was launched last week from Piepgrass' yard, Greenpoint. She has been built for special service in the shoal waters of Great South Bay for Mr. Wm. K. Vanderbilt, and for a shoal boat is quite sightly. 64ft. on deck, beam 12ft., depth 4ft., draft 22in. The eng The engines are of the inclined direct acting type, cylinder 16in. diam., 20in. long, vertical boiler. Wheels 8ft. diam. We hear that other similar vertical boiler. Where set, ostim, we near that other similar vessels will soon be put in hand, as there is quite a demand for light draft steam yachts on many of the shoal bays which afford good fishing and shooting in this latitude, as well as in some of the inland reaches of the Southern coast and Florida.

THE COMFORT.—Mr. Lord's new compromise cutter is rapidly approaching completion at Gorman's shop, foot of Court street, South Brooklyn. The natives don't like ber; she is not enough of a clam shell to suit their mud-sailing propensities, but the Comfort will be an excellent craft for all that, and a safe one into the bargain. She was designed by Com. Hyslop, owner of the Comfort will be an excellent craft for all that, and a safe one in the bargain. She was designed by Com. Hyslop, owner of the smart little Petrel, and, like the latter, is a perfect specimen of wave-line design, both in areas and water-lines. She is 55ft, long 12ft, beam, 5ft, 14in, deep, Ballast, one ton iron on keel and four

CRUISING SOUTH,-The Magic, Francis M. Weld, has been on an extended cruise in Chesapeake Bay and adjacent waters. She was in Washington during the Courtney-Hanlan race

COMING WEST.-We hope the report that the New Bedford Y. C. proposes sailing in squadron to New York will prove true. They will meet with a hearty reception from the N. Y. Y. C., Atlantic Y. C., and Scawanhaka Y. C. Mr. Thomas Lord has presented the N. B. Y. C. with a cup to be sailed for at their annual regatts some time in July.

FOR CUBA.-Smedley is building a 25ft, racing hoat for parties in Cuba. It will be the twenty-fifth boat he has sent to those parts,

THE INTREPID.—This schooner, Mr. Lloyd Phoenix, N. Y. Y. C., sailed May 20th for Cowes, Isle of Wight, via the Sound.

NEW YORK YACHT CLUB .- At the meeting of the club, May 20th, the following fixtures were decided upon: Brenton's Reef | The new schooner is expected to show speed, although comfort

Challenge Cup, June 29; Cape May Race, Sept. 9; Bennett Schooner and Sloop Cups, June 19th, during the regular minual regatta, and the annual cruise will commence Aug. 11th from Glen Cove, the Eastern Y. C. being invited to join.

THE NEW STEAM YACHTS.-Great secrecy has been maintained but the two big steam yachts building at Cramp's yard, Ken gton, Philadelphia, and nothing has been published abou them beyond what has appeared in these columns. Recently, however, a World man was count to the occasion, and climbed over the fence after the following: The yachts are named Orsair and Stranger, both alike in model, the former belonging to Mr. Charles J. Osborn, lately owner of the Dreadnaught, and the lat-ter belonging to Mr. George A. Osgood, formerly of the Fleetwing. They are said to have full midship bodies (probably judged from the warped standard of our shallow river steam yachis) and fine ends. Length over all, 185t; on deek, 170t; sin; on heel, 180t;, beam, 23ft; hold, 12ft; draft forward, 7ft, and aft, 10ft. Flush decks, managing combings, etc.; schooner rig, with lug sails to brail up and down the masts. The latter are 60ft. deck to hounds, oral in and down the mass. The latter are out, does to nounds, with 28Tt. topmasts hed to truck; gails, 28Tt. Engine and bolier space inclosed in iron bulkheads. Saloon, 18xifff, 6in., a long passageway from att leading into it. On one side of this passage is the owner's suite of rooms, 22Tt. long, 11Tt. 6in. wide, divided into sleeping cable and sitting-room, with bath and tollet rooms. attached. On the port side of the passage are staterooms for d. On the port side of the passage are staterooms all of course fitted up in the most luxurious and to with electric bells and other conveniences, mirrors, etc., of a costly kind. Forward of the engines is mests, all of con officers' mess-room, galley, pantry, etc., and a roomy forecastle for the crew, besides four staterooms for the officers. On deck is or no crow, besides four staterooms for the omeers. On deep pilot-house, chart-room and smoking-room forward of t mokestack. These yachts will measure 450 tons, C. H. Engin pmpound, direct acting, surface condensing; cylinders, 44 a 24in. diam., with 24in. stroke, to turn up to 150; shaft, 10in. diam.; propoler, fit. diam.; laft. pitch; expected speed, 10 diam.; propoler, fit. diam.; laft. pitch; expected speed, 10 knots; two tubular boileras, 16ft. diam.; lack boiler bas 18s Jiu. tubes fit. long, and two furnaces 3ft. 9fin. diam.; made of corrugated iron; each has 42 square feet of grate, and Lioute. heating surface; the shells are 13:16 of an inch thick. 90 lbs, working pressure; smoke-stack, 24ft, bigh, 4ft, diam.; bunkers carry 40 tons, enough for only four days when steaming ounsers carry so couls, cooling for only four days when steaming full power. The Stranger has a sturp bowsprit, with an eagle for figure-head, and the Corsair has her rail and stem carried out into a "bufft-up" bowsprit after the usual pattern. Each yacht is said to cost about \$100,000. There is also some probability of a third vessel of the kind being laid down soon for Mr. E. S. Jaffrey of this city.

QUAKER CITY YACHT CLUB.-The spring regatts of this live QUARK CITY LAUT CLOSH—The spring regards of this live club will be sailed May 31st. We acknowledge receipt of tickets and sailing rules. Commodore Bancroft's General Orders No. 1 might be studied to advantage by Now York clubs. The Q. C. Y. C. has no less than a dozen fixtures for the season. It is a club in fact as well as in name.

SEAWANHAKA YACHT CLUB.-Fleet Captain W. Howard Mitchell SEAWANIANA I ACTIVE CLOSH-FICE CURPAIN W. HOWSTA MINTERS HAS ISSUED HIS OF OFFICE OF THE MAY JIST. Yachts will meet off Tompkinsville, S. I., and at 10 30 A. will get underway on signal from the Commodore, passing next in line under his lee. The fleet will round the Southwest Spit, and returning drop anchor off Pavillion Hotel, New Brighton, S. I., where dinner will be served. be served. If this proves a poor harbor for the weather, yachts will be signalled to anchor off Tompkinsville, where conveyance will be signaled to anchor of Tompkinsylle, where conveys to the Pavillion Hotel can be procured. Yacht owners sho send notice to the Chairman of the Committee, Mr. F. de Luze, 18 South William street, of the number of guests The sailing rules for the Corinthian matches can be obtained from the Secretary, O. E. Cromwell, 34 Liberty street

THE LAKE BURET .-- A correspondent writes from Toronto : We had a launch in this neighborhood on the sth inst, of a 17-ton cut-ter, built for Mr. Innes, of this city. She is built for cruising, and draws over six fect. Two years ago we had only one cutter here, the imported from Rivet, 17 tons, and this su mmer there will be four. Evidently people are coming to their sen ough slowly.

NONPAREIL YACHTS .- Mr. Clapham, of Rosyln, L. I., has just NONPARELL TACHTS.—Mr. CHRIMIN, OT KOSYIN, L. I., has just finished a 22ft. cat boat, "nomoarell" model, drawing only 12in. water, for parties on Lake Geneva, Wis. He will also lay the keels of several more of the same kind shortly. These light draft boats seem to supply a demand felt in shallow waters better than the ordinary lib and mainsails, and they are said to be fast and ser-viceable, as well as lower in price. Mr. Clapham has also intro-duced several novel features in the rig of those boats, the reef points being attached to a light batton running across the

BOOKS RECEIVED.—We are in receipt of "Lloyd's Yacht Register," "Kemp's Yacht and Boat Salling," "U.S. Report on the Herreshoff Boiler," "Walton's Model Yachts," "Mines of Maine," "Strength of Wrought Iron and Chain Cables," by Kent, revised by Cdn. L. A. Beardslee; "Nautical Magazine," "Van Nos-trand's Engineering Magazine," S. W. Silver's "South Africa," S, W. Silver's "Australian Grazier's Guide," and others, which will be reviewed at earliest opportunity.

PORTLAND YACHT CLUB.—Our annual regatta was sailed May 20th in a variable wind and fog, which somewhat affected the number of entries, but for all that, there was a fair proportion of the fleet at the line. Fifteen minutes were allowed for the neet at the line. Fifteen minutes were anowed for crossing the line. No starters in the first class, the cup for which is now in possession of the club, the Vira, which held it hist, having been sold. In the second class sobooners Nellie held the cup, and the second class sloop cup had been twice won by Twilight, the cup for the third class being offered for the first time this year. Course for second class, 18 miles; third class, 12 miles. for second class, 8 hours; for third class, 6 hours. Cups to be won three times to become property. Entries, second class schooners. Nellie, John E. Bradford, 2sft. w. l., and Unline, E. H. Chase, 24ft. 4in. w. l. Won by the latter in 4h, 20m, 19s. Entries, second class Tempus, W. W. Gould, 27ft. 2in. w. l.; Marie, T. - ft. -in.; Twilight, W. A. Charlton, 36ft. 7in.; Mary, sloops: Tempus, Kimball, — II., — III.; Twitight, W. A. Chartton, 30th Jin.; Marty, F. W. Balley, 22th. Sin.; Idler, George C. Amen, 24th. 2io.; Clarence, B. W. Jones, — ft., — in. Won by Mary. Entries, third cass sloops: Allie, A. L. Johnson, and Caro. Won by the former, with Sm. 24s. to spare. Regatta Committee, T. K. Jones, G. W. Rich, J. T. Wyer, F. L. Mosely.

well remembered by quently he became th quently he became the owner of Haswell, now belonging to Mr. Bloomer, of Pawtuxet, R. I., next the Kate, Mallory and Zuave, all of which were considered very successful craft in their class.

and safety as a cruiser have not been overlooked. Also lest Mon and sandy as a Grader have not been dyortooked. Also, last Monday, a new schooner, the Southern Cross, from the yard of Mr Decker, foot of Twenty-first street, South Brooklyn, built for ex-Com. John A. Monsell, Atlantic Y. C. As she went off the ways, Miss Annie M. Monsell, the owner's daughter, successfully ways, Jass Minio and Montain, the owners adapther, successfully christened the new vessel, Sho is 13ff. over all, 65ft. w. l., 13ff. beam and 7ff. 9in. in depth, this latter a most commendable qualty, being more than customary. Spars; mainmast, dock to thouads, 61ff.; foremast 62ft., topmasts, heel to truck 83 and 23ft., a good deal lottier than usual, and another good point for the new yacht, as they are rigged to house. Main boom 43ft., gaff 30ft., fore boom 23ft., gaff same. Bowsprft 43ft., of which 33ft. is out-board, the head booms being all in one. The Cross being stiff in form will take only six tons of iron inside. The forward end of her board, 18ft. tong, can be lowered a couple of feet by a device of the owner. Cabins finished in ash, walnut and cherry. At the foot of the owners. Cabins finished it is a stateroom on each side, abatro them the sail-room. Forward of the main saloon on the starboard side is the owner's room, on the port side two other starboard side is the owner's room, on rooms and the usual pantry, ice-box, galley, etc. A tank of 160 gals, has been built over the forward half of the center-board trunk to supply water to the lavatories, etc., and a second tank, of 80 gals., beneath the floor.

CANOE CONGRESS REGATTA.-The canoe offered by Rushton as prize is now on exhibition at H. C. Squires' store, No. 1 Cort-andtstreet. Conditions are:—

First—It is to be a paddling race.

Second-Open to all cances and canceists.

Third-Single or double peddle

Fourth-Must be twenty starters. She is a beauty, and worth

PROVINCETOWN YACHT CLUB.—The following officers were elected for the year 1880: Commodore, George H. Holmes; Vice-Commodore, A. P. Hannum; Secretary and Treasurer, H. H. Sylvester; Trustees, N. D. Freeman, Joshua Snow, J. H. Dyer

vester; Trustees, N. D. Freeman, Joshua Snow, J. H. Dyer; Re-ratta Committee, E. N. Young, Alexander McKenzie, Thomas Lowe, Joseph A. West, James A. Small; Measurer, Joseph S. At-wood. The union regatta, open to all yacht clubs, will take place about Aug. 1. Many new members have joined the club, and the season of 1880 will be a lively one.

NEW YORK BAY REGATTA

An annual match in New York Bay open to all comers, at least the first year, seems now to be an assured fact, as the manage-ment of affairs has been placed in efficient hands. New York seems finally to be waking up in this matter, and a public race after the Eastern style will henceforth be among our fatures.

The date of the race has been set down for Monday, Aug. Sth.
Open to all; entrance money for yachts over 20tt., \$5; for yachts
under 20ft., \$3. Course in the lower bay not yet settled upon
The committee are desirous of receiving entries at an early date. so that a definite list of prizes can be announced beforehand.
They will all be in cash. Entirels, until further notice, should be made at the committee rooms, Monday evenings, in the bank building, corner Eighth arenue and Thirty-fourth street, where further information is to be had, or they may be addressed to ost-Office Box 2,070, or to any of the under-mentioned members of the committee; Chairman, R. V. Freeman, H. R. Y. nembors of the committee; Chairman, R. V. Freeman, H. R. Y. C.; Treasurer, T. H. Rogers, N. J. Y. C.; Secretary, Henry Woods, N. Y. C.; J. H. Kreymeyer, P. Y. C.; Androw Brush, E. Y. C.; J. A. Weaver, C. Y. C.; A. J. Prime, Y. Y. C.

THE CANOE REGATTAS

Editor Forest and Stream :

I notice in your paper of May 6th a letter from a Canadian can-I motive in your paper of May with a letter from a Canadian can-orist commenting on the definition of a camoe, and urging that is not only shall not be clinker bulk, but shall conform as closely fas possible to the "birch-bark" model. It seems to me that this would really be "Hamlet" with the Prince's part left out, as it would exclude exactly the boats which have made canoeing popular in Bugland and America, viz., a decked boat with keel and some sheer, and usually clinker built.

is evidently unaware that modern canocing, as n the United States and England, is carried on alunderstood in the United States and England, is carried on almost entirely in such craft, the open canoe being almost unknown in England and but little used in the United States, except for sporting purposes. As to the birch-bark model, it is entirely unsuited to our requirements of a fast-sailing canoe for rough or smooth water, and should the writer visit Lake George next summer has will each the models was profes. swited to our requirements of a fast smooth water, and should the writer a mer he will see the models we prefer.

As to clinker-build, nearly all the wooden canoes in the United As to clinker-build, nearly an the wooden cances in the United States are lapstreak, over three-fourths of the boats of the New York Canoo Club being of that build; and while there may be a better mode of construction, there undoubtedly are many worso, Fore came this being of the built, and with the may we a better mode of construction, there undoubtedly are many worse, and it will be well to stick to the lapstreak until it is positively decided which if any of the other modes is better.

W. P. STEPHENS, N. Y. C. C. Rahwau, N. J., May 20th.

SAN FRANCISCO YACHT CLUB'S OPENING CRUISE.

opening of the season "at San Francisco was colub The opening of the season "at Sant Francisco was celebra-ted by the San Francisco Yacht Club on April 2th, in a very satisfactory manner. The guests assembled at the club house, New Sancelito, at 2 P.M., the fleet being anchored in front all decked out with their new sets of signals. There were some 400 decked out with their new sets of signals. There were some 400 greests present, who annused themsolves during the afternoon in daucing, visiting the yachts, etc. After a late lunch had been served, signal was made for the yachts to "prepare to get under way." Flags were bauled down and mainsais set. The guests, who were to return to the city by the ferry, all assembled to see the start for Mare Island, some thirty miles up the bay. The fleet looked very pretty as they get under way and stood off up the bay. The steamer went out of her course through Raccoon Straits, behind Angel Island, and passed among the yachts. nd Angel Island, and passed amo

Name of the years and passed among the yachts arrived by bours at Mare Island, some getting up at 11 P.M., and others

an nours at Mare related some getting in part 1 F.M., and others not till 3 in the morning. The Aunte arrived up first.

At 1 P.M., on the following day, preparations were made for the L30 start for a best back to San Francisco, this being the interesting part of the cruise. The New York sloop, Aunte, was expected to beat the California yachts, and she and the new sloop Neille bad never been with the fleet before.

The fleet was composed of the following yachts: Froik; tingship Courted Ching that There is the Courted Ching.

ship), Consulto, Chispa, Annie, Clara, Neille, Startled Franc, Lollin, Virgin, Lively, Gawleta, Magie, Molle, Enid. Daphne, Fleur de Lie, Myrtle and Laran. Several of the yachies of the club had not been able to attend the opening, owing to the bad weather of the preable to attend the opening, owing to the bad vious few weeks, keeping back painting, etc.

At 1.36 the signal gun was fired, and the yachts went off in a bunch. For about a mile, on Mare Island Straits, the wind is abeam, with the usual trades, but on rounding the lighthouse the yaelits have a dead-on-end beat through San Pablo Bay for fifteen miles, till the Sisters' light is reached, and from there one tack will bring them to San Francisco, some twelve miles further. It is in the beat down Pablo that the best racing is done, for the bay is large and wind-swept, and is seldom smooth. Rubber coats and oil-skins are usually in order. A good fresh breze was met on Pablo, bringing all the yachts rull-to, and the race down was very oxcling. The things, built by Court Turner, the measurer of the San Francisco Yacht Club, arrived home first, followed closely by the Cossudo, another one of Turner's models. The Annic came next, having cracked on very hard, until she lost her topmast. After her came the Nalle, and then the Clara, followed by those of the fleet which did not turn off through Raccoon Straits for the club house. sbeam, with the usual trades, but on rounding the lighthouse the Straits for the club house.

An interesting incident of the race down, was a little set-to be-An inferesting incident of the race down, was a little set-to between the Consucto and Con Common. It will be recollected that these two yachis made a match has summer for \$1,000 aside, when the UConnor was the winner. The owners of Consucto had Injudiciously taken out several tons of ballast previous to the race, counting on light weather, but it blow very hard, and she couldn't be "kept on her feet." She had been champion on the bay for some time, till that race. The O'Connor does not belong to the club, but came up and joined the fleet at Mare Island, after an expressed intention by her owner to lead the whole fleet down, and the Connoral in marticular. The latter, however, was in here an oxpressed intention by her owner to teat the whole heet down, and the Consuclo in particular. The latter, however, was in her usual trim, and the O'Connor caught a Tartar. She singled out the Consuclo, and they went it tack and tack, the O'Connor setting her staysall in the fresh breeze in the endeavor to lead. The Consuclo beat her shandsomely and fairly, much to the delight of the members of the club. The Chispa beat her also. There is now a prospect of a match between these three yachts, which are all

a prospect of a mach between these theory and a most of equal size—6) feet.

The fleet used their new Signal Code for the first time on the opening cruise, the Commodore giving his orders with flags. The code is a very extended one, carefully prepared, and has already been found very useful. SAUCELITO.

THE SCHOONER CAROLINE.

A S THIS schooner represents a type of craft now quite popu-A lar in Boston, the following details we have obtained con-cerning her construction will prove interesting: She was built for Boston owners by Wm. L. Dolbeare, Fort. Hill Wharf, Bos-ton, from model and specifications furnished by D. J. Lawior, the ton, from model and specifications furnished by D. J. Lawior, the well-known naval architect of Chelsea. Length over all, 53ft; v. L., 45ft; beam, 15ft. 3in; depth, 7ft; draft, 6ft. 9in; lenst free-board, 3ft. to 190 of rail. Straight stem, elliptic counter, rocker lead, with fore-foot completely cut away; boid round side, slight hollow to garboards; U timbers all the way forward, plumb stern post with clean entrance and run. Frames of backmanck and oak, double, each sin, slided and 7in, moulded; strongly belied together; spaced 15in, between centres amidships and gradually spread to 16in, at the ends. Keel of oak, 9in, sided amidships, 5in, at the ends, tapering down to 6in, at the bottom, where the iron casting or shoe underneath meets it. This show weights 4,620 lbs., and is in one casting, 35ft. long, 6in, thick at top and 2in, at bottom; about 15in, deep in its center. It is secured by Hin, galvanteed serve bolts, with Theads, spaced about 16in, apart. Resides this Caroline takes 4t tons lead inside, east to fit. We would have liked her better if she had been given more displacement, and believe her designer thinks favorably of the suggestion.

The frames are "plumb and V fastened" to the keet, three bolts in each floor. Stem and stern post sided 5in, of oak with oak deadwood and knees, security and closely fastened with Jin. from botts. Floorhead streaks, one each side, 9x2in, riveted to floors. Bilge streaks "ouble, each 9x2in, likewise through riveted.

Clamps 18y2in, double, riveted in every frame, and a shelf worked on top 9x2in, bolited down into the clamps and through each frame with lin, galvanized bolts; leads clinched on washers. Beams 0 to 3in, x 4in.; the trunk beams of oak 3in, sided, secured to shelf by two 5-16in, bolts and to frame by one 4in, bolt. Plank, hard pine 11in, thick; reals \$4x1in, water ways 3in, thick, let in over all stanchions and fastened with 41in, spikes. Deck of selected white pine 21x1in, worked in a single length fore and aft, fastened with 21in, nails. Rails of white oak 4x1in, worked also in the class and the control of the con in single length and secured to stanchions with his galvanized

The bulwarks are 9in, high amidships; the cabin trunk is 15in. the ontwarts are sin, niga amicsings; the econd trunc some high and fift, wide, with oak sides bent around for and in a solid piece; the beams dovetailing into it. Skylights 5x3ft, one over cabin, the other, over staterooms; the forecastle hatch leads down the forward end of the house. The cockpit is finished in down the forward end of the house. The eccepit is finished in oak. There is not a brushful of paint about the deck; everything is kept "bright," and very stylish and orthodox it looks, a great improvement over the yellow and blue huse so liberally daubed over our craft to their damage in appearance. The Caroline has an Edson streng sear. The latter we certainly do not admire. It is lopsided and more than is required for the tonange. The deadlights, or ports in the side of the eabin house are of circular ground glass in brass setting, and are far handsomer than the barm windows disligating most yachts. They are made by E. B. Vannevar & Co., and ought to come into favor for their shinshape amperance, if nothing else. There is 3ft.

handsomer than the barn windows disfiguring most yachts. They are made by E. B. Vannevar & Co., and ought to come into favor for their ship-shape appearance, if nothing clse. There is sit. spread to the shrouds, the chain plates being [x:2]in, galvanized iron and reaching well down the side.

Helow, this craft shows up a big lot of room. A spaclous main saloun aft, 13ft, long, with 7ft. floor and no center-board to split it up into narrow gangways either. Pour berths out in the wings, ample locker room and transoms 20in. wide. A midships is a large stateroom on the starboard side, with a berth 3ft. wide and a 3ft. floor, wash basin, lockers, etc., all tastily and practically arranged. On the port side is the pantry, w. c., ice-box, linen and wine lockers; and in a roomy forecastle an Atlantic range No. O., two berths, pump, sink and lockers. As the builkhead is abstit the forward end of the house, standing helght superior to New York yachts of her size. The water-tank is underneath the thoor aft and holds eighty gallons. The cath is uniderneath the thor aft and holds eighty gallons. The cath is uniderneath the thor aft and holds eighty (allons. The cath is uniderneath, 15ft. sin., 5pars; Mahmmast, 20ft. dock to cap; 16in. diam. at partners. Foremast, 41ft. dock to cap; 16in. diam. at partners. Mastheads, 4ft. Topmasts, housing, 18tt. long. Bowspirt outboard, 15ft. sin., diam. at stem. Flying jibboom, 6ft. beyond, with a lft. pole. Foremast, 9ft. 6in. from forward end of 1, w. 1, and 16ft. 6in. drift between it and the mainmast. Maínboom 40ft., galf 18ft. 6in., from forowom 18ft. 8in. to the foot.

Sails: Mainsail 314ft, luff, 174 bead, 374 foot, 434 leech. Fore-sail 394 luff, 144 foot and head. Jib 334 luff, 31 leech, 25 foot. Fly-ing jib 44 luff, 254 leech, 19 foot. Working jib topsail 52 luff, 28

ing jib 44 buf, 284 leech, 19 foot. Working jib topsali 52 buff, 28 leech, 394 foot. Storm staysall sets up on its own luff 3ft out-board, 13 foot and 21 leech. Main gaff topsall 24; foot, with a 19ft. club and 19ft, yard. For racing a lug foresal will be used 28ft. on the foot. Also main topmast staysall 17 head, 41g luff, 28 foot and 38 leech; balloon jib topsall 32 buff, 54 leech and 45 foot. The Curoline will carry two waist boats 13 and 14ft. long, and receive an outfit more complete and thorough than customary, as she is intended for extensive cruising along the coast as well as for racing. In many respects she is a decided advance upon the "common ruck." She will have runners to her lower masts, whips in the standing part of all her gear, and topmasts are fitted to house.

ssrs. J. Palmer O'Neil & Co., who advertise the Westley Richards Hammerless Gun so exfensively, have a small additional advertisement under the "For Salo" column, which it would be well to notice.—[Adv.

-The rubber crawfish which is advertised in another column, has been highly commenced by anglers. It is one of the most taking of artifi-cial bait for the black-bass. It is ugir, but the fish, perhaps, like it all the better for that.

Duck and Trout.—As a gentleman was angling in the mill dam below Winchester, he accidentally threw his line across astrong white duck, which, suddenly turning round, twisted the gut about her own neck, and fixed the hook of the dropper fly in her own breast. Thus entangled and hooked, she soon broke off the gut above the dropper, and sailed down stream with the end of the fly trailing behind her. She had not proceeded far before a trout, of about a pound and a half, took the fly effectually. Then commenced a struggle as extraordinary as ever was witnessed—a duck at the dropper, and a large trout at the end of the fly. Whenever the trout exertediself, the terror of the duck was very conspicuous; it fluttered its wings and dragged the fish. When the trout was more quiet the duck evidently gave way, and suffered herself to be drawn under some bushes, where the shortness of the gut did not allow the trout to shelter himself. The duck's head was frequently drawn under water. By chance, however, the gut got across a branch which hung downward into the water; and the duck, taking advantage of the purchase which this gave her, dragged her opponent from his hole and obliged him to show his head above water. Then it became a contest of life and death. The trout was in its last agonies, and the duck in a very weak state, when the gut broke, and suffered them to depart their own way.—Sporting Magazine.

DOUBLE SHOTS.—The many notes on two suppe at one shot remind me of a similar occurrence—substituting pinanted grouse for suppe—in the shooting achievements of an uncle of mine in lowa. He was out one day on the prairie, armed with a single barrel muzzle-loader. Two grouse got up in front of him; one circled to the right, the other to the left. He held his gun on one, and, seeing the two birds gradually approaching each other, waited until they were on the point of crossing, when he pulled trigger and dropped both. W. P. M.

—The Williamsburg Athletic Club will hold their first annual spring games on Saturday, June 5th, at 4.30 p.M. The new club house and grounds are at Wythe avenue, Penn and Rutledge streets. The contests are open to all amateurs.

A Grand Glass Ball Tournament

Under the auspices of the

LYNN SPORTSMAN'S CLUB Will be held on their Ground, at

OAK ISLAND, REVERE BEACH,

on the

17th of June, 1880,

Commencing at 10 o'clock A.M.

Commencing at 10 o'clock A.M.

O'EN to teams of three men from any organized club in the New England States.
Conditions as follows: The score to consist of skty balls per fean (twenty balls per man), from skty balls per man), from skty balls per man), from shot off with five balls cach. Entrance fee, like dollars and fitty cents for each team; nor dollar and fitty cents for each team; nor dollar and fitty cents for each team; nor dollar and fitty cents for large five for each team; or grantzed olds in Kew England will be allowed for expense of organized olds in New England will be allowed for organized olds in New England will be allowed for on June 18th. The money will be divided into four prizes, as follows: Forty per cent, for first prize, thirty per cent, for second prize, wenty per cent, for third prize. CHICAGO LAWYERS IN THE BRITISH WILDERNESS.

(Concluded.)

HE chief product of this region is rock-not soft sandstone or thin layers of limestone, but original primeval trap. It is trap dykes which form the bold headlands overlooking the north shore of Lake Superior; trap which forms the bed of the Nepigon from its head to its mouth; trap which constitutes the high cliffs and palisades extending half its length; trap which towers so abruptly over its bed that not even the pine can flud a foothold in its crevices; huge trap boulders, hard and smooth, which show their sides along our course; trap columns which stand erect like pillars in the Giant's Causeway; trap battlements which from upon us from gigantic trap castles; and trap bulwarks which, like the high poop of a seventy-four gun ship. overhang the river, and then, doubly impressive, are re peated from the deep, clear water beneath.

Granite and sienite we find occasionally as stray boulders, and quartz and sandstone pebbles on the beach on Lake Nepigon. But granite and quartz are never common near red rock.

The forests are not the magnificent growth of Michigan and Wisconsin, but stunted, like the soil on which they grow. Of the valuable hard woods, such as oak, beech, maple, hickory and ash, I have not seen a single The pine, though plenty, is of a size and quality which a lumberman would scorn to touch. Cedar, hen lock, spruce, tamarack and poplar are abundant, and in the foliage the mountain ash shows its brilliant berries. to relieve the continuity of green. And as though the land were destined forever for the Indian, from every hillside is displayed the bright silver bark of the birch, ever ready to build the frail canoe, the same in shape, size and construction to-day as when Columbus or Vespucius first turned their vessels toward the West.

Game is more plenty and varied than we had been led to expect. Black bear are by no means scarce, and caribou are often found, though great perseverance and skill are required to hunt them successfully. At Red Rock we saw the head and antiers of one recently killed, the antlers being two feet three inches across, and from their tip to the point of the nose measuring four feet eight inches. No deer are found along this shore, there being no opportunity for southern migration at the approach of Pigeons and partridges can be found almost

very day. Mink, beaver, lynx, martin, otter, fox and fisher are trapped by the Indians in winter, and their furs sold to the agents of the Hudson Bay Company, the controlling spirit of this region. Last evening one of our Indians shot a couple of muskrats, and though their skins are worthless at this season, their bodies were speedily consigned to the same kettle which a few hours before had sung the requiem of six rabbits, which furnished a famous stew. It was a notable procession, these is Indians, two carrying a pole on which was strung the cauldron of mysterious contents, the others following in solemn file from the fire to a convenient nook behind the birches. We could just make out through the bushes six hads brought into a contracted circle. The kettle returned empty, the Indians happy.

The snare set for these rabbits is a very ingenious contrivance. Over a run-way the Indian places a twig in a semi-circle, and then bends down a small sapling, fastening the end by a cord with a half hitch to the middle of the semi-circle, just within which he extends the noose, which drops from the end of the sapling. The nose is held in its place by bits of twigs, with which all passage outside the run-way is closed. Then a slight barrier is formed in the run-way on each side of the snare, so that the notation is captor makes the tour of his snares, inding probably two or three rabbits for every ten snares which he has set. The fur of these rabbits is now gray, but in the winter they are snow-white.

We have not seen many birds, except an occasional crow, hawk, snipe, loon or osprey, and two eagles—one perched on a high tree, the other soaring in true republican style. There is an eagle's nest on the palisades below Split kock, and our Indians endeavored to get an answer from the young eagle in it, but without success. Ducks and geese are said to be nlenty those and geese are said to be nlenty through and geese are said to be nlenty through and geese are said to be neared.

can style. There is an eagle's nest on the palisades below Split Rock, and our Indians endeavored to get an answer from the young eagle in it, but without success. Ducks and geese are said to be plenty in season, but we have seen scarcily a dozen. Of songsters I have heard none, save a fine chick-a-dee, which sang as merrily as though there were upon him the responsibility of filling this solitude with melody.

In fish Bonfield is the variety man of the party, having captured a whitelish, a perch and a sucker. Pratt se-

captured a whitefish, a perch and a sucker. Pratt secured a fair sized lake trout, which, contrary to the accepted notion as to its habits, jumped clean out of the

curred a fair sized fake frout, which, contrary to the accepted notion as to its habits, jumped clean out of the water for his fly.

The woods furnish a great variety and abundance of berries: whortleberries—here called blue-berries—red raspberries, currants, both red and black, gooseberries, cherries, small and red, and consisting almost exclusively of pit and skin, black haws, and what the Indians call elderberries, which are in reality a small species of cranberry. I have seen some elegant mushrooms, but as the Indians do not use them, we did not care to eat them upon our own judgment. There are a few strawberry plants, apparently producing in season berries about the size of a small currant.

Of nuts I have seen no indications, except some hazelbushes at one of the portages, and two little squirrels looked as if uncertain of proper support.

The rose bushes on some of the hillsides show that a nother season much of their present barrenness must

another season much of their present barrenness must have been concealed

have been concealed! We met a detachment from a surveying party, prospecting for the Canadian Pacific Railway, by the aid of which the Canadians hope to free their territory from paying tribute to "The States;" but, if the other sections are given up as exclusively as this to the production of rock unfit for the quarry, and timber, little of which is fit even for firewood, whence will their resources be de-

rived?

So thin and gravelly is the soil that although we have not yet had a frost, the woods along the side hills are already clothed in their fall colors of yellow and red, ready table their products become

ready clothed in their fall colors of yellow and red, ready to shed their exhausted leaves. We have found no gnats or black flies, and a judicious selection of camping grounds has removed us from the few lingering mosquitos, and placed us each night within hearing of the music of a rapid or waterfall. Previous experience has rendered us forgetful of the inconveniences of camp life and thoughtful of its amenities. No drawing-room ever saw an act of more graceful and considerate politieness than when, in making a long portage, Pierre, one of our guides, leading the way, carried a stick in his hand with which he shook the dew from the grass on both sides of the trail.

Though the fishing has been good at each of the well-known pools, we have always found better wherever the low stage of water had exposed a riflle where ordinarily

known pools, we have always found better wherever the low stage of water had exposed a rifle where ordinarily the water would be smooth. In the swift water above a rapid or fall, we have usually done better than in the more regularly fished pool below; and, whenever following our own judgment, and casting according to the indications of the water, we have invariably had far better success than in fishing the places pointed out by the guides. The trout here are not as some have argued, a salmon trout, or anything different from the regular speckled brook trout, growing, under favorable circumstances, to a large size.

One circumstance seems strange, that at each point where one day we find especially choice fishing, we can hardly get a bite the next. High and Pratt, standing on a single log, caught ten elegant trout in water so shallow that they could see every movement of every fish, which did not seem to be in the least disturbed by the gyrations of their companions, as one after another was drawn out; but each fish seemed to be waiting his turn, and rose to the fly accordingly. Naturally they tried that log again, but not a trout would respond to their most skillful casts.

Generally, when we can see the most trout, the fewest will rise to the fly. Often, when one is hooked, several others will follow it about, even to within a few feet of the boat, and if the captive is a small one, the attentions of the large ones assume a character by no means en-couraging. When a half pound trout, expecting to regale himself upon a dainty fly, suddenly finds himself dragged one way by a remorseless line, and attacked from behind by an equally remorseless monster, who is no respecter of his own species, it is a busy day for the little fellow. One of these pursuers was nearly captured in the landing net.

The water of the lake and river, though naturally not so The water of the lake and river, though naturally not so cold as some of the streams which flow into them, is beautifully clear, and one can easily see the trout swimming about among the rocks, eight, ten, or even twelve feet below the surface, and on taking a sounding in the lake, I found that I could see a white pebble, one inch in diameter, on the bottom at a depth of 23½ feet.

HOMEWARD BOUND.

INGEWARD BOUND.

Friday morning we turned our faces homeward. Our enthusiasm had never forsaken us, nor our spirits flagged, but the feeling seemed to pervade the party that our descent of the river should be as easy as that of Avernus. The point seemed to have been reached at which we could return with dignity and satisfaction.

The tents were struck, and as the supplies were placed in the canoes, no one could fail to notice how rapidly they had diminished under our sharpened appetites. The last ceremony was to free the trout in the camp corral, where they seemed to have become quite happy and contented. Of course every one gathered at the edge of the water, and as a few stones were removed on the outer side, the trout clustered nearer the land. They seemed to move toward us, rather than toward the freedom now offered them. So far, the scene was a failure. Then we tore out a dozen more stones, but the prisoners of our watery Chillon were still unwilling to depart. So Pratt commenced driving them forward with a landing net; it was some time before he succeded in getting a single one into the open river. Several times he got one of them half way through the now broken barrier, when it turned and forced its way back. And each one, when finally driven out into the river, only moved a few feet; and there we left them close together in the river, not ten feet from their three days prison, accepting liberty as reluctantly as did Kinglake's gazelle h its native Arabian desert.

and there we left then close together in the river, not ten feet from their three days' prison, accepting liberty as reluctantly as did Kinglake's gazelle in its native Arahian desert.

What animal it was that proveled around our camp that night, is purely a matter of conjecture. It would sound well to set it down as a bear, but that would not be the truth. But as the cook was getting supper, he saw a bear swin the river from the point below.

In the morning Michel brought in three partridges, which he had stowed on the hill back of the camp. Bonfield had cachéi his ammunition train with Pratt's keg of pickles, and the reserve of pork, flour and bacon, at a portage half way down the river, so he confessed no jealousy of the Indian's prowess.

At Plat Portage we met an Indian family on their travels. The man wore two feathers in his hat; in which respect only was his dress suggestive of the Indian. The squaw had a large, flat face, and what the Scotch would call an "open countenance." The pappoose ast quietly by the rough contrivance which serves as a cradle at night, and on a journey is strapped to the mother's back, pappoose and all. A wooden bow, fastened at right angles to the board, makes the whole resemble a miniature Russian winter traveling sled. The maiden, Minnehaha, lacked somewhat of the beauty and grace attributed to her in poetry and legend. Her traveling out-lik was emphatically light, and we have seen handsomer blankets. There were only live dogs vasible at any one time. How many more belonged in the family is uncertain. These five could only nuster one complete tail; a percentage which seems to be about the average along the north shore. Through the interpretation of our guides, we learnt that since our departure two steamers had been in at Red Rock, though what were the present prospects of the presidential candidates, and what progress Sir Garnet Wolseley was making with the Zulus, and what base ball cith is now ahead for the championship, we failed to learn; and as they offered us no late pap

have known all about it; but if Chicago and New York had both been burned, we should be still in blissful ig-

have known all about it; but if Chicago and New York had both been burned, we should be still in blissfut ignorance of the fact.

Bonfield has introduced a new method of catching trout—with an axe. The process is simple. He wanders along the river bank, casting for another five-pounder, and on the back cast lands his fly in the top of a good sized birch, and there fastens it securely. With a downcost of the control of the still be and there fastens it securely.

Sunday was at very quite day. We moved three or four miles down the river, and then all the circulating library of the party, which had hitherto lain in the most neglected recesses of the campt-sacks, was brought out, foliets were made, partly in camp, partly before the mirror which proved so unfortunate for Narcissus, and the only episode was a little excursion to a point which communded a time view of the falls below the camp. We commended congratulating frant on the approach of the storm which he has been constantly predicting, but unfortunately a fine, double rainbow appeared on the hill opposite, and that was all there was of the storm.

We are waiting for some one to fall out of a canoe, or slide off from some slippery stone. Thus far, not enough of an accident has befalfan any one to furnish challing stock for the others, though we have a reasonable supply in the performances of that architectural curiosity sold as a trout red to the overconfiding King.

Thus far the discipline of the partry, as to using the fly of the artist and adjuring the bait of the pot-fisher, has been well maintained; but King, advancing the theory that on the home trail some allowance should be made, threatens to drop a frog into a deep hole which he has discovered, and extract a six-pound trout. His only fear is lest some wandering pike or pickered will take hold—he now despises all less aristocratic lish than trout—or lest lligh, as a true representative of fly-fishing, shall frown his disapproval on any method less artistic.

It is equally extraordinary in repose and i

artistic.

It is equally extraordinary in repose and in action. It gives way at every conceivable point, and of course at the most critical moment, and finally it became a serious question whenever he attempted to make a cast how many sections would follow the fly into the water. His unruffled good nature, through so many trials, so worked upon the admiration of his courades that he was soon equipped with a good rod, and now is happy.

INDIAN LIFE.

INDIAN LIFE.

Bonfield having declined to repeat his last Sunday evening's lecture on "The Hen," the conversation around the camp-fire gravitated toward the Indians, and our guide William was addressed, a very intelligent half-breed, whose Scotch father, an officer for forty-tive years in the Hudson Bay Company's service, and now retired on a pension, still fives near Red Beck. He explained the absence of old Indians by saying that most of the men, as soon as they passed middle life, became consumptive and died, and that the women, having nearly as much exposure, ivel little longer.

"Ob you know, William," asked one of the party, "what that family of Indians we met at the portage are going to do at Lake Nepigent".

"They are going to the Hudson Bay Company's port there, and as soon as cold weather comes are going trapping, and will sell the furs to the company in the spring." "The man is an old hunter, and probably the company will let him get in debt for a little flour, and he can generally each some fish."

"But won't be have pork, or bacun, or salt?"

"Oh, no. Except salt; but he will self three or four stands of snares, and his wife will tend them, and if they have good back they will catch rabbits enough to live on; and when they begin to get scarce at one place they will move to another."

"But if they don't happen to catch any rabbits what will tend the new there will self they and taches some ish in the net, which he probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has with him to set under the ice. For the probably has we carried

blankets I could easily have carried on one arm
I the rest of the household articles on the other.)
ble sure. That is as much as most Indians have.

Of course he has a skein of twine to make rabbit snares

"To be sure. That is as much as most Indians have, off course he has a skein of twine to make rabbit snares with."

"Do all the Indians about here trap for the Hudson Bay Company?"

"That's the only way they have of making anything except when they go out with anglers in the summer. The best tixed and the healthiest Indians are the Esquinoul to the control of the

dence in the skill of his more Northern brother, "The Es

dence in the skill of his more Northern brother, "The Esquinam is very expert with his paddle."

We have three or four methods of communicating with our Indians. English will do very well with William, and will answer with one or two others to the limited extent necessary for camp life. French does rather better, as this country was originally settled by that nation, whose language is still quite generally spoken. The Indian dialect none of us are very proficient in, and the only new phrase thus far mastered is rendered phonetically. "Ow-Wow, Way-Webb;" or, freely translated. "Go-ahead, hurry up." When everything else fails we fall back on pantomine, perhaps the most successful of all methods, as it certainly is the most vivid and entertaining.

all methods, as it certainly is the most vivia and emetaining.

Although our guides knew every foot of the river, and had traveled it all their lives, we could not get any two of them to agree as to the names of any of the well-known pools, except Hamilton's Pool, and that two of them called Cameron's Pool at first. Which was Cameron's Pool none of them seemed to know positively, though we finally satisfied ourselves in other ways; nor have they any idea of distance as measured by miles. Their only standard seems to be for short distances, at what Their only standard seems to be for short distances, at what time they must start to get there by dinner-time, or be-fore night; and for long distances, how many days it takes to make the trip. In that way they can give accu-rate statements, five miles of bad river and two or three portages standing as the equivalent of twenty or thirty miles of good river, as the case may be. Whenever pressed to give distances in miles, their answers were always evidently, and sometimes absurdly, inaccurate. Their ideas of time are also extremely vague and uncer-tain.

Their ideas of time are also extremely vague and uncertain.

Along the north shore of Lake Superior there remain now probably less than 2,000 Indians, mostly Chippewas, and many of these travel 150 or 200 miles every year to draw the 84 a year which the Government pays them on account of the cession of their lands. This money is, of course, mostly captured at once by the traders who follow the Government agent, but who are not allowed to supply them with liquor.

Some of the Indian legends are very amusing and interesting, as their account of the creation of the world, the deluge, of the formation of Isle Royal by their God, Nana-Bijo, out of a pebble which he threw behind him when the Chippewas were fleeing across Lake Superior in their cances before the warlike Mohawks, though their belief in them seems now to have been much shaken.

belief in them seems now to have been much shaken.

Monday morning we made the long Pine Tree Portage and it was astonishing to see how heavy a weight each Indian would carry on his back and shoulders, the pack being so arranged that the greatest strain would fall upon the forehead, which is covered by the broad part of the canvas strap. Louis once complained that this made his head hurt him, so he kicked up his heels and stood on his head for awhile, and then went on apparently satisfied and relieved.

canvas strap. Dous once companied that his made his head for awhile, and then went on apparently satisfied and relieved.

FORCUPINE STEW.

While making a short portage the "guides treed a porcupine. Down went canoes and packs in an instant, and there was shouting and whooping, and a loud cry peculiar to the Indians, while the river bank furnished stores for a regular bombardment of the poor rodent. After carrying on their sport until all were satisfied, they cut down the tree, and quickly dispatched poor porcupine with a club. Then John the Baptist, who, being unable to speak a word of English, had been expressing his desires, his hopes and his feelings, in the most excited motions and the most vigorous pantomine, was commissioned to prepare the stew. First he scorched it over the camp-fire, then took it to the river and cleaned it, then cut it, head, skin and all, into small pieces, which without delay were consigned to the kettle, for which the supply of rabbits happened to be short that day. We watched the proceedings with interest, but did not manifest a strong desire to partake of "pot-luck."

Toward evening the trout rose steadily to the fly and encouraged us to delay putting up the rods, with using which our hands and wrists were fired and sore.

Tuesday evening our last camp was made, and the guides entertained us for a long time around the fire with accounts of their hunting and trapping life, of encounters with various wild animals, and of their labors and duties when in the employ of the Hudson Bay Company. The black bear and the lynx, here called link, naturally played a prominent part in these recitals. Directly they resumed their Indian dialect, and Michel, their leader, gave a vivid description, accompanied by most expressive gestures and action, of what High rightly divined to to be the running of a dangerous rapid.

Wednesday morning King, who had delayed the executed the desired frog, and launched him into the foaming waters at Camp Alexander. He will never cease to regret that it was a plie w

versity had blown down stream when we were going up, and up stream as we came down, now changed to the west, and our Indians, rigging their blankets on their setting poles, spread them, to the now favoring breeze, and borne onward by wind and current along the widening river, through Lake Helen, and down the last rapids, they steered our frail fiotilla to its journey's end. The Mell was waiting to receive us, and no steamer ever carried from that port a party more happy and contented.

A Bone of Contention.-A somewhat amusing incident took place at one of our clubs in the city a short time ago, which illustrates the fact that even a "bone sharp," or to speak more by the card, an osteologist, may be of some practical use in the affairs of every day life. A group of gentlemen were gathered in a club, which

is situate something less then ten miles from the corner Fifth avenue and Twenty-third street, and had been discussing the affairs of the world in general and of this Republic in particular. These trifles having been exhausted, and a pause ensuing, one of the party drew from his pocket a somewhat cylindrical bone about two and a half inches long and placed it on the table, remarking, as he did so, that it had passed through his mouth in and that he believed that no one present could tell what it was. A careful examination of the specimen (which had been somewhat obscured by having one end sawed off) ensued, and many conjectures as to its nature were bazarded by those present. Several guessed duck, one rabbit, two or three pigeon, others curlew and partridge, At last, emboldened by the many failures, the owner of the bone offered to wager a dinner for those present that no one could tell what it was, and for a while it seemed that no one would accept his offer. At last, however, a well known banker bethought him of a friend of his whose knowledge of bones is not small, and accepted the wager, stipulating, however, that he should have three days' time for consideration. This having been agreed to, he at once wrote to his osteological friend, inclosing the specimen, relating the circumstances and begging his assistance in the matter.

The letter was mailed in the evening, and the next morning the banker was made happy by the receipt of the following dispatch :-

"Letter received. Your specimen is right shin bone BONESHARP," of big bullfrog.

So he won his dinner,

A Kind Foster Mother,—Littleton, N. H., May 15th. Mr. H. D. Bishop felled a tree about the 1st of May that had four young red squirrels in it, two of which he took to his house and put them into a half-barrel with three kittens that were ten days old. Old puss soon came in, and Mr. Bishop expected to see his pets devoured instanter, but, to his surprise, the old cat kindly acted as foster-mother, and has up to this day. I have just been to see them; they were taking their nourishment and seemed to be experts, for when removed would again take their position at once. They are nearly half grown, and are as frolicsome as the kittens, often seizing them by the paw, and holding it as they would a nut.

JOSEPH IDE.

We once tried an experiment somewhat similar to this,

We once tried an experiment somewhat similar to this, which was successful up to a certain point. We caught two young leverets (young of the common brown rabbit) and put them in a box with a cat that had been deprived of all her kittens except one. The old cat nursed them kindly, but the kitten was too old when they were added to the family. For a week all went well, but at the end of that time one of the rabbits disappeared, and the next day we caught the kitten in the very act of running off with his remaining foster-brother in his mouth.

HABITS OF QUALL.—In Maryland in dry fall weather these birds, during the day, generally remain in the woods or underbrush instead of being found, as might be expected, on the stubble fields and along the hedgerows. An inquiry into the cause of this by our correspondent, Mr. Joseph K. Bramble, leads him to believe that the birds resort to the woods for shelter from the hot sun, and as evidence of this, he cites the fact that, as soon as the weather becomes clear and cold, the birds are found, some distance from the brush, in the open fields.

Nesting of Icterus Spurius in a Spruce Tree.—A few days ago my attention was called to a nest which was situated in a spruce tree, and upon ascending the tree I found it to be the nest of the orchard oriole. The nest was built about ten or fifteen feet up from the ground, and was composed chiefly of grass, and was just finished. Do these birds often build in a spruce tree?

SEYM. R. INGERSOLL.

We have never met with a similar case, and should be glad to learn if any of our readers have done so.

SPRING NOTES FOR APRIL.—Cleveland, Ohio, May 17th.
—April 1st.—Noticed a wood powee.
April 2d.—Saw first cliff swallows to-day. Robins beginning to build.
April 4th.—First chipping sparrows around.
April 10th.—Saw barn swallows, grassfinch and brown creepers to-day, for the first time this spring.
April 14th.—Wood thrush and house wrens have arrived. SPRING NOTES FOR APRIL .- Cleveland, Ohio, May 17th.

this spring: Baltimore orioles, catbirds, yellow warblers,
brown thrusi, Maryland yellow-throats and kingbirds.
April 27th.—Saw a scarlet tanager to-day.
April 30th.—Saw first purple martin.
SEYM. JR, INGERSOLL,

ABOUT SHARKS

SOME time ago the question was asked through the columns of FORRST AND STREAM whicher there were any authonic accounts of men being enten by sharks. Thave seen no reply to this question, and being last winter on the Florida coast—a region where sharks are abundant—I made inquiry among fishermen on this point.

sharks. I have seen no reply to this question, and being last winter on the Florida coast—a region where starks are abundant—I made inquiry among fishermen on this point.

A well-known fisherman, a man of intelligence and veracity, who has been fishing on that coast for forty years, tells me that he knew of two persons devoured by sharks at Pensacola some twenty years go, when he was living there. While he was at Indian River Inlet, on the cast coast, before the war, a boat from an American manof-war was capsized on the bar, and most of the crew were devoured by sharks. At Musquito Inlet, east coast, ten years ago, a boat containing a man, a boy and two dogs was capsized in crassing the bar. The man and one of the dogs started to swim ashore, but soon disappeared. The boy and the other dog remained on the wreck, and were taken off by this fisherman, who lived near. He saw a number of very large sharks swimming to and fro in an excited manner near the place where the man disappeared, and beheved that he was eaten by them, as the water, from the set of the tides at this inlet, casts every object sconeror later upon the shore, and neither the man nor the dog was ever seen again. About seven years ago a sailor from a vessel lying at the inlet went out fishing in the ship's boat. He did not return, and search being made, the boat, oars, etc., together with the man's hat, were found on the beach. The nam was never found, and the opinion was that the sharks got him.

This bar is a dangerous place. A mumber of vessels during the last ten years have been wrecked there. There is no lighthouse, and mone between St. Augustine and Cape Carnaveral, a distance of one hundred niles. In some of these wrecks sever at persons were drowned, but in every instance except the two mentioned the bodies delifted on shore. The inference is that in those two instances the bodies were eaten by sharks.

My intorman has several times seen dogs seized by the sharks, while swimming across the river; also hogs. Once, while fishing with a seine

was common to find the head of one on the hook in the morning, the body having been devoured by other sharks in the night. Once he found half the body of an alligator five feet long in the stomach of a large shark, it having been hitten in two in spite of its coat of mail.

Referring to the common story found in all books, that the shark is obliged to turn on its back to seize its prey, this expert considered it an error. All his experience taught him that the shark seized its prey like other fishes. Indeed, he thought it would starve if it had this obstacle in its way. With all its swiftness there are many fish awifter than it. Often, while fishing on the beach in summer for channel bass, a shark would come and cut the fish in two before it could be hauled in with a hand line, and the shark could be seen to seize it. I myself the fish in two before it could be hauled in with a hand line, and the shark could be seen to seize it. I myself have caught with rod and reel many sharks in those waters, of many species—the common brown shark, the shovel-nosed shark, the hammer-headed shark and the nurse shark, and whenever they were in a position to take the bait they always took it swimming on their bellies. I have had them also take my fish away before I could reel them in,

bellies. I have had them also take my lish away betore I could reel them in.

METEOROLOGICAL.—Van Buren, Ark., May 1st.—I notice, in your issue of April 22d, your correspondent, Thos. S. Roberts' report of the range of thermometer during the month of March at Minneapolis. On refering to my own table of same dates, each day compared shows a very wide difference, more than I supposed the average could be—and his coldest days were our coldest, For instance, on the 14th he reports below zero 8 degrees, and on the 16th 7 degrees below. On reference to my notes, I find our coldest day was the 14th, and at sunrise my thermometer stood 30 degrees above. On the 16th, 32 degrees, and so on through the entire month. On the 25th we had the last quail hunt of the season, after which time they are beginning to pair and nest. There were three of us, and each had one dog. The day was excessively warm, and we took it very leisurely. The mercury 33 degrees at 12 o'clock noon. Plenty of birds, but too warm to exercise enough to make large success. The three of us only killed eighty-five birds, Chas. D.—, our crack shot, killed over half the birds, whilst myself and Capt. B.— poked arrund and cheered our friend, as he seemed to kill and bag every hird that rose in his range. Our month of April, which has just passed, has been the strangest, the most variable in temperature, and in meteorological plenomena generally, that has ever; in the memory of anybody, been previously experienced. On the 5th and 6th, for instance, the thermometer stood 91 degrees above, such day, from 2 to 1 o'clock r.M. On the 8th, had some frost, and mercury as low as 35 degrees at 30 mills which was from west or month of April, which has just passed. The wind all the while was from yes or the oldest had been to some frost, and mercury as low as 35 degrees at some on, with no two days alike. The wind all the while was from west or o clock P.M. On the Stn, as low as 55 degrees above at same hours. On the 9th, lad some frost, and mercury as low as 35 degrees at sunrise; and so on, with no two days alike. The wind all the while was from west or southwest. The 18th, the day that the winds of the great ruler broke loose and swept certain localities with the besom of death in the form of cyclones and hurricanes, was a beautiful, warm morning, with some southwest wind. At 10 clock thermometer stood at 70 degrees. Except an ordinary hall storm, we had none of it here. But the hall in some places was enormously large, many stones weighing eight and ten ounces, killing quail, rabbits and other small animals.

OLD SPORTSMAN.

WAS IT THE BEAD SNAKE?—Philadelphia, Pa., May 17th.—Editor Forest and Stream:—In your last paper I find a letter from "Nauticus," in which he describes a certain snake and asks its name. Now, if am not mistaken, the snake alluded to is the bead snake (Elaps fulvus). It has very prominent poison fangs, but very rarely uses them. It is streaked black, red and yellow, and presents quite a handsome appearance. In regard to its tail, I think "Nauticus" specimen must have met with an accident, as the tail is not blunt but tapering, like the tails of most other snakes,

BEAD SNAKE,

"Do GRAY SQUERELS LAY UP WINTER FOOD?"—Queries "Sharpeyes," in Forest and Stream of May 6th, In Central New York they do provide for themselves sustenance for the long, cold winters; but in the much paider climate of Southern Indiana, from the well-kingwar. sailder climate of Southern Indiana, from the welt-known prelatory disposition of the gray squirrel, I can well believe that he would impose upon the thrift and fore-thought of his little cousin, the chipmunk—"chirriping monk." When I was a youth I saw many gray squirrels' nests, or dens, broken up in winter while helping the older men in the woods get out timber for building purposes or for fuel. These nests, or dens, were usually well stored with accorns, beech nuts and shell barks (we used to call them walnuts), and often we found in them small apples. I distinctly remember on one occasion of finding in a gray squirrol's den an apron (calico) in a tolerable state of preservation, that was recognized as the property of a near female relmember on one occasion of finding in a gray squirrel's den an apron (calico) in a tolerable state of preservation, that was recognized as the property of a near female relative of the writer, which had been missed from where it was hung "to dry" several months previously, after being washed. In the section of country to which I referencental New York—the gray squirrels usually nested in hollow portions of the beach tree, although I have seen their dens in the black oak. In the selection of points for dens they almost invariably chose a southern exposure for obvious reasons. A hollow limb, with the entrance to the hollow from below, appeared the favorite choice. They would tear out the rotten wood and enlarge the hollow, and their store would appear to be packed in with considerable mechanical accuracy. I do not now remember of ever seeing a black squirrel there during the winter months. It is possible that they were seen by others, however, although it was common rumor that they went South during the cold months. Every second year, when there was plenty of mast or nuts, the squirrels—black, red and gray—would be numerous. They generally appeared with the fall flight of the wild piecons in considerable numbers, and I always found great delight in studying their habits and shooting them. Philatelphia, May 12th.

To "W,"—An Iowa correspondent, who writes over this signature, will no doubt remember having sent us last fall the pupe of the cabbage butterfly, in which the eggs of a parasitic Hymenopter had been deposited, and some of which were filled with its larve. Since their receipt, these pupes have been kept inclosed in a bottle on our deak, and within the past day or two the adult parasite has a parasite property of the control of the past day or two the adult parasits. on our desk, and within the past day of two the adult parasites have commenced to appear in considerable num-bers. We first noticed them May 20th, though some had probably appeared earlier, as there were a number of dead ones on the bottom of the bottle. We hope that "W," will be glad to hear that her pets have done so

ONE WAY TO CATCH BADGERS .- The following very interesting account is contributed by "F. M." to the London Field. We have no badgers here in the East, it is true, but perhaps some of our Western readers may gain a useful hint from the extract :-

a useful hint from the extract:—

Mr. Stanley Orred has certainly futfilled both my conditions, and has been more successful than I should have thought possible; but then he had a most able coadjutor in Trojan, and he hit upon a tract of country where badgers were very plentiful. My plan was to choose a moonlight night, and watch the badger out of his carth; then put a sack with a running noose round its mouth down the earth, so arranged that the mouth of the sack just filled the mouth of the hole. The mouth of the sack was then propped open with a little bit of stick, just big enough for the purpose. When this was accomplished by the man whio, seated in an adjacent tree, had watched the badger out of the earth, he gave a lond whistle; then I, who had been waiting a few hundred yards off with the two terriers, let them go. They rushed toward the whistle, and getting on the seent of the badger, ran him full tilt into the sack. Then my confederate had nothing to do but pull the string, and the badger, having in his hurried rush displaced the bit of stick which kept open the month of the bag, was safely caught uninjured in the sack, and nothing remained but to take him home. This seems easy enough in theory, but in reality it was full of difficulties. All depends on the tact and watchfulness of the man who has to put the sack in the earth. The badger has a habit, before he finally leaves his carth on his rounds, of coming two or three times about half out of the earth to look about him. If their gaths critical time he seents, see or hears the watcher, back he bolts with a grant and all is over for that night. Again, the watcher in his eagenress sometimes does not allow the badger to get far enough away before he begins the descent from the tree. The badger hears him, and rushes back to his carth, and he will unhesitatingly clarge the man if he is standing between him and his gertin, and slip by him somehow between the man who has to put the safe had he badger to get far Mr. Stanley Orred has certainly fulfilled both my like a habit, before he finally leaves his earth on his rounds, of coming two or three times about half out of the earth to look about him. If during this critical time he scents, sees or hears the watcher, back he bolts with a gram, and all is over for that night. Again, the watcher in his eageness sometimes does not allow the badger to get far enough away before he begins the descent from the tree. The badger heart him, and rushes back to his earth, and he will unhesitatingly charge the nau if he is standing between him and his earth, and slip by him somehow before he can grab him with his tongs. Sometimes, too, especially if there are two or three badgers in the earth, they will come out in the plateau in front of the hole and play about and right, etc., for for half an hour before they go of, and then it is a hundred to one that the unkney man in the tree coughs or sneezes in his anxiety, or else that a little puff of air betrays his whereahouts, especially if it should come on cold, for the cold air descends from him to the badger. On the one occasion in which I was successful, I chose a very warm, still noonlight right in July. About 7 F.M. my man went off with the sack and tongs to the earth, which was about a mile from my house. It was a small cave in the limestone, just at the top of a wooded ravine; all round the earth wasperfectly free from trees or underwood of any kind, except one ash tree which grow just above the cave in the side of the hills, with the terries in a slip, and ensonned myself in the wood are still summer's night. Suddenly the shrill whistle choed down the glen. I instantly loosed the terries, who at once disappeared in the gloom of the wood. I tove after them up the side of the ravine, and on arriving, panting and breathless, on the plateau in or arriving, panting and breathless, on the plateau in found in Africa, East and West Indies and Brazil, comes

front of the cave, found my man dancing with excitement, and a tremendous row going on in the month of the earth. It seems the dog, more active than the birch, had gone headlong after the badger into the sack! Wa drew out the sack into the open, and, fearing the dig would be seriously injured at such close quarters, frombled them both out on the grass. The bitch instantly joined in the fray, and just at that critical moment, when we wanted every bit of light to enable us to get a firm grip of the badger with the tongs, the moon went behind a cloud. There was nothing for it but to wait and let them light it out. Forumately, in about these minutes the moon came out again, and we were enabled to pin the badger by the back of the neck. I had a rare job to get the dogs off, but I managed at length to get them both coupled up and fastened to the ash free. It was not by any means an easy task to get the badger, who was very savage and snapping at everything, into the sack; but it last we managed it field up the month of it, and carried him home. I kept him for a bit, fill I had managed, by digging, to get another—a female; and then I turned them into an artificial earth in a wood of my own some miles off. They did not stay there long, but soon established themselves in an adjacent quarry, where they may be now for aught I know, for I soon afterwards sold it is property and removed to mother part of the country. As far as I know, they never bred. They destroyed son oryong rabities by digging them cut, and they were particularly fead of wild bees' nests, which were found serable out all over the estate; and if one over sees a bee's nest torm out and due up, one may be pretty sure there are badgers in the vicinity. In this taste they re semble the bear.

ANDMALS RECEIVED AT CENTRAL PARK MENAGERIE.—May 30th.—One whimbret (Numericus phecomps), hab, Europe; flew on board of steamer 350 miles off coast of Russia; presented by Dr. Cleveland W. Gorf, New York City. One coclot (Felse pardelle), presented by Mr. A. P. Larmed; one Agouli (Disspirated islinator), presented by Mr. C. Carlos, New Orleans; one white swan ("games dot), brad in the menagerie; ten Toulouss geose, bred in the managerie; one Newfoundland dog, took the first prize at the late dog show, placed on exhibition. W. H. Conkluf, Director.

[From a Staff Correspondent.]

THE INTERNATIONAL FISHERY EXHIBITION AT REBLIN

IV. AMBER.

IT is a most wonderful exhibition. One hardly knows where to begin to write about it; the objects displayed are so varied, and many are so curious, useful or beautiful, and the transitions from one case or department are so strange, that the eye never tires. Coming from the nets and boat models one finds a case of pearls of great value, logother with shells of mother-of-pearls, inflicting and other brilliant hues; or, a case of nuber in its natural or manufactured state, a sjewely, ejeratholders, cuff-buttons, etc., and to a lover of amber the display here is marveloons. Here are amber genus, half clear and half cloudy, into whose depths the eye of the miser-lover delights to dwell; and here are insects whose pre-historic lives are recorded in the preserving resin of a vegetation which disappeared before man canne, but whose identity is so clearly established that the insects can be correctly classified by the naturalist of to-day. Your correspondent is an ardent lover of amber, nor the kind of clear gum seen on cheap pipes, but of those delicately veined and clouded forms through the rent veils of which the fire is seen within, glowing like a thing with life. A thing of life? It is alive. It is the soul of a thing which had what we call "life" it housands of years ago, but which has been buried in the sand and mud, under lakes and seas, until the day of its resurrection and purification from outward definement, when it again sees the light and assumes place among the beautiful things of earth, and lives its new life and gayer scenes. Moore's line—

"Around thee shall glisten the loveltest amber."

That ever the corrowingsea-brid has wept,"

If altered to "fir-tree" would be as truthfully descriptive as they are positical, and much more considered.

from a mixture of the juices of several plants belonging to different genera, and it differs much in color, hardness

to different gener

to different genera, and it differs much in color, hardness and its solubility.

At the bottom of this see, mixed with clay, coze, sand and set-weed-times now heaps of amber formed from generations of trees which once flourished where the waters now oil, the stems of which have rotted while the imperishable gum lives to tell that it was once part of the lite blood of the vanished vegetation which part of the lite blood of the vanished vegetation which perished by the sinking of the ground and the indux of the vater, and the old manner of gallering the amber was to pick up what was washed ashore by the storms, but the material so obtained was never equal to the demand and the harvest was uncertain and not renumerative. Now they wait until the wind is in the right direction and of sufficient strength to wash up the amber which may be among the submerged sea-weed or other floating matter which is not far from shore, and men are stationed to watch its approach and signal to the town below the appearance of the harvest, upon which they hasten with rakes and nets and rush into the sea to bring the tangled mass on shore while the women search it for prizes. Beside this there is also a system of clear water fishing, in which the bottom is seen and masses of weed are dragged up with rakes into nets and so taken on shore. These systems were the only ones known until about the midmass of shore while the women search from press. Deside this there is also a system of clear water fishing, in which the bottom is seen and masses of weed are dragged up with rakes into nets and so taken on shore. These systems were the only ones known until about the middle of the sixteenth century, when the physician of the Markgraf Albrecht made an attempt to dig amber from the bottom, he rightly concluding that there must be much of this valuable substance hidden in the sand and clay, and in the year 1555, during the reign of George Frederick, there was much taken on the shore of the estate of Lochstein, yet the work seemed of no great value and shortly after stopped and was never resumed until 1781, when it received a new impetus, and by the approval of Staats Minister of Heinitz permission was granted to open a "min" of aniber which was carried on for twenty-four years with great sucess. All these undertakings, however, faded away before the development of the amber beds which were found in great bunches without any mixture of blue earth, and in 1811 private persons were allowed to establish diggings on their own coasts, and this has in these later days developed into the great establishment of Messrs. Stantien & Becker at Kooningsberg, who have a fleet of fifteen steam dredging muchines and carry on the business on a large scale. The exhibition of Messrs. Stantien & Becker at Kooningsberg, who have a fleet of fifteen steam dredging mechanism and coloration. Green, violet and red are the rough, from the size of a pea to that of a walnut, suited for the lacquer trade, and then larger pieces, with here and there a bit which has one face polished to show its grain and coloration. Green, violet and red are the rave colors, and are therefore highly prized, the former being exceedingly rare, although very fine specimens are here exhibited among the ecoher specimens as well as curious forms and patterns, and a great number of specimens

exceedingly rare, although very fine specimens are here exhibited among the cabinet specimens as well as curious forms and patterns, and a great number of specimens containing leaves, bark and insects, the latter of which are very interesting, the animal life being represented by the families and genora, Blattina, Hypoclina, Prenolepis, Lasins, Termes, Hymenoptera, Coleoptera, Diptera, Lepidoptera, Arachnoidea, Polycentropus, Orthoptera, Neuroptera, Arachnoidea, Polycentropus, Orthoptera, Neuroptera, Rhynchota and others, with their larval forms making a most interesting study.

The model of the amber fishery belonging to the firm named shows the steam dredging machines in position with an endless belt of buckets which drag the bottom and bring up the mud, which is then washed for the genus; as well as the boats, nets, houses of the fishers, etc., together with glass cases showing how the amber lies in the sand, the blue sand and the sea-weed.

As the fisher in the south fishes for pearls in the sea, and the miner seeks for precious ore in the mine, so is amber, the beautiful child of the sun, sought and fished for along the coasts of East Prussia, and it is impossible to quarred with the learned Professor Hasse, who, in his enthusiastic account of the amber fisheries at the close of the past century, declared that the finding of anbee was "the discovery Exidence the circuit of the south with a discovery Exidence the circuit of the south with a discovery."

enthusiastic account of the amber fisheries at the close of the past century, declared that the finding of amber was "the discovered Eridanus, the fruit of the tree which the earth produced in the golden age," nor with his associating the amber with the apples of Hesperides, with the tree in Paradise, nor with his following this train of thought until it led him to the belief that his beloved gem was not only the fruit of which he spoke, but that its presence in such quantities plainly showed that East Prussia was in fact the exact location of Para-dise.

These thoughts are indeed poetry, and if the apples of the These thoughts are indeed poetry, and it the appies of the Hesperides in passing through those mills whose slowness is only equalled by the exceeding fineness of the pulp, as we proverbially learn, were made into cider of such purity that it solidified into the subject of our story, then we know that horticulture has retrograded, and that it cannot be done with the Newton pippins and greenings of to-day, plant we never so wisely.

BLACK BASS FOR INLAND WATERS.

THE black bass is peculiarly adapted in every respect for stocking inland waters, and there is no fish that will give more abundant and satisfactory returns for the stight tabor and expense attending its introduction.

As a food fish, there are very few more palatable fresh water fishes, its flesh being firm, white and flaky, and when cooked, mutty, tender and juicy; it has few bones, little offal, and us a pan-fish is unexcelled. Its game qualities are of the highest order, and it will thrive in waters where the Salmonidae cannot exist.

There are few fish more prolific than the black bass, while there are none more hardy, healthy and better able to take care of itself, and none that protects or cares more tenderly for its young; consequently, there is no limit to its production and increase in suitable waters, save a lack of natural food.

In view, then, of its many good qualities, there is no

save a lack of natural food.

In view, then, of its many good qualities, there is no fish more worthy of cultivation, mone that can be so easily transplanted, and none that is so well adapted to the various waters of our country—for there is none that has such an extensive original habitat. Every attempt that has been made to stock suitable waters with the black bass has been crowned with signal success.

Both species of the black bass, Meropiterus salmoides (Lacépedé) Gill, the small-mouthed bass, and Micropiterus pathidus (Rafinesque) Gill and Jordan, the large-mouthed black bass (Oswego bass), are remarkably active, muscular and voracious, with large, hard and tough mouths,

are very bold in biting, and when hooked exhibit gameness and endurance second to no other fish. In the opinion of the writer, both species are equally "gamy," and equally good for the table: they generally inhabit the same waters, and there is a slight diversity of habits where they co-exist together.

Naturally, the small-mouthed bass prefers rocky streams, or the gravelly shoals and bottom springs of lakes and ponds, while the large-mouthed bass lurks about submerged roots of trees or sinken logs in rivers, and delights in the beds of rushes and other aquatic plants of lacustrine waters; but both species readily adapt themselves to waters of various conditions, when transplanted, easily accommodating themselves to their surroundings, and have a happy faculty of making themselves at home wherever placed; so that in some localities their habits are as anomalous as their colors, which may be of any shade of black, green, or yellow. shade of black, green, or vellow,

shade of black, green, or yellow.

As before stated, black bass are very prolific, the females yielding fully one-fourth of their weight in spawn. The period of spawning extends from early spring until midsummer, according to the section of country or temperature of water; in the South, occurring as early as March, and in the North and West, from the middle of May until the middle of July, always earlier in very shallow waters, and somewhat later in those of creat leavit in those of great depth.

great depth.

The bass leave their winter quarters, in deep water, about a month or six weeks previous to the spawning season, at which times they can be seen running up streams and in the shallow portions of lakes in great numbers. Soon afterward the males and females pair off, and prepare for breeding. They select suitable spots for their nest, usually upon a gravelly or sandy bottom, or on rocky ledges, in water from eighteen inches to three feet deep in rivers, and from three to six feet deep in lakes and ponds; and, if possible, adjacent to deep water or patches of aquatic plants, to which the parent fish retire if disturbed.

The nests are circular, saucer-like depressions, varying

lakes and ponds; and, if possible, adjacent to deep water or patches of aquatic plants, to which the parent fish retire if disturbed.

The nests are circular, saucer-like depressions, varying from one to three feet (usually about twice the length of the fish) in diameter, which are formed by the bass by fanning and scouring from the pebbles all the sand, slit and vegetable debris by means of their tails and fins, and by removing large obstacles with their mouths; this gives the beds a bright, clean and white appearance, which, in clear water, can be seen for a hundred yards or more. Sometimes the nests are formed upon a muddy bottom, with a pavement or foundation of small sticks and leaves, from which the mud and slime have been washed and scoured; and as this often seens to be a matter of choice—there being beds upon gravelly situations in the same waters—the writer has sometimes thought that this discrimination in the location of the nest might be owing to some difference of hishits in this respect in the swe species of bass, but of this he is by no means sure.

The females deposit their eggs upon the bottom of the mests, usually in rows, which are fecundated by the mests, and become glued to the pebbles and sticks contained therein. The eggs are hatched in from each to wocks, depending on the temperature of the water, but usually in from eight to twelve days. When hatched, the young bass are almost perfectly formed, from one fourth to whe half of an inch in length, and cover the entire bed, where they can be easily detected by their constant motion. After hatching, the young fry remain over the beds from two to seven days, usually three or four, when they scatter into the deep water, or take refuge in the weeds, under stones, logs, or other hiding places.

During the period of incubation the nests are carefully

refuge in the weeds, under stones. logs, or other hiding places.

During the period of iocubation the nests are carefully guarded by the parent fish, who remains over them fanning the eggs with her fins, creating a current which washes away all sediment. But after the eggs are hatched, and while the young remain on the nests, her vigilance' becomes increased and increasing, and all suspicious and predating intruders are driven away.

After the young bass leave the spawning beds their food at first consists of animalculae, larve, insects and the ova of other fish; as they grow older and larger they devour worms, tadpotes, small fish, etc.; and in later life they vary their diet with crawfish, frogs, muscles and watersnakes. Where food is plentiful they grow rapidly, reaching a length of two inches in a few months after latching, and at a year old will measure at least four inches. At two years of age they will be found from eight to twelve inches in length, weighing about a pound, and will grow nearly or quite a pound a year riber at maturity in from two to three years, according as the conditions for their growth are favorable or otherwise.

Black bass grow with wonderful rapidity where an equable temperature of water and an abundance of food obtain, and will increase in weight, as before stated, about a pound a year; but under adverse circumstances or unfavorable conditions their growth is nuch slower, therefore no rule of general application can be established from any single instance, or as the result of any exclusively local test or experiment. Their growth; and, indeed, this is true of any other issh, for it is a well-known facility they and the supply of food and temperature of water, but also by the extent of range. Bass in small ponds do not thrive so well nor grow so fast; the smaller the extent of their range the slower will be their growth; and, indeed, this is true of any other lineresse in size is hardly appreciable from year to year, even though their supply of food be abundant. An equally well-at or where the range is extensive; extreme depth of water seeming to be more favorable to their growth than merc extent of surface.

extent of surface.

From the foregoing account of the breeding and growth of the black bass it will readily be seen that there is no necessity for hatching it artificially in the manner practiced with the salmon, trout, or shad; nor would the method be successful, for reasons well known to fish culturists. The black bass, being hatched with but a small or rudimentary unabilical vesicle or yolk-sac, needs the fostering care and attention of the parent fish, who teaches it how and where to find its food, and protects it from its enemies, in the same way that a hen cares for her brood.

All that is required to stock a charge and will be a small or the parent of the parent of the parent should be a small standard the parent should be a small standard the parent should be a small

All that is required to stock a stream or pond with black bass is to procure a small number of the fish, at least a year old, and place them in the waters. If the water is

of a suitable character, and possesses a sufficient supply of food, the bass will propagate naturally, and rapidly increase in number. The Potomac River and its tribu-taries, which now swarm with this desirable game fish

on root, the bass will prophagate hadtraily, and rapidly increase in number. The Potomac River and its tribitaries, which now swarm with this desirable game fish, were originally stocked with less than thirty young bass from Wheeling Creek, West Virginia.

The only considerations to be looked after are the character and condition of the waters to be stocked, and the supply of food contained in them. It is uscless to attempt to stock very small and confined ponds of less than three acres in extent, for in such ponds, without communication with running water, the bass will not increase beyond a certain limited number, which will usually be the number of fish originally planted; for the supply of natural food will soon become exhausted, and the old fish will prey upon the young ones, should any be hatched, until a certain average, proportionate to the supply of food, is established and maintained. In the case of newly formed ponds, they should be well stocked with minnows, crustaces, frogs, etc., at least a year before the bass are introduced. It is also necessary that there should be deep holes in all ponds of not less than twelve feet in depth, to which the bass can retire in very hot weather, and where they can also hibernate.

In some waters one species of black bass may prosper better than the other; for instance, in large ponds or shallow lakes, with a sluggish current, muddy bottom, and abounding in fresh water algae, the large-mouthed bass will thrive better perhaps than the small-mouthed species; that in streams and ponds with a good supply of running water, eitherjor both species may be introduced. Both species of black bass are natural to the waters of Ohio, and originally existed in all the streams, those emptying into the Ohio River as well as those flowing into Lake Erie,—Dr. A. HENSERALL, in Ohio Report.

FLY-FISHING FOR BLACK BASS.

SECOND PAPER.

CLICK REELS.

THE black bass angler who has confined himself entirely to bait fishing and a multiplying reel, and bas had no opportunities for knowing anything of flyfishing and its implements, must understand that a click reel is indiapensable in fly-fishing. As the two methods of augling differ so essentially, they require reels of widely different functions.

lishing and its implements, must understand that a circle reed is indispensable in fly-lishing. As the two methods of angling differ so essentially, they require reels of widely different functions.

The multiplying reel must be very rapid in its action so as to deliver the bat as far as possible at a single cast, the thumb, meanwhile, controlling the rapid readering of the line so as to prevent back lashing of the spool; but in fly-fishing the line is lengthened gradually, a few feet being taken from the reel by the hand before each subsequent cast, while the click offers the necessary resistance to the rendering of the line to permit this to be done without over-running.

As the multiplying reel is made wide so as to allow for the thumbing of the spool, and as this necessity is not required in the click reel, the latter is made quite narrow, thus permitting the line to be reeled without bunching and at the same time allow of its being reeled rapidly enough for all practical purposes without a multiplying action; for the main object of a multiplying reel is for rapidity of action in casting and not in retrieving the line, as is often erroneously supposed.

rapancy of action in casting and not in retrieving the line, as is often erroneously supposed.

After a fish is hooked a click reel answers the purpose of playing and landing it as well as the best triple or quadruple multiplier made—if not better; for after a fish is receled in by main strength with a rapid multiplier and an attempt made to land it before it has been killed on the not the materialize the real coart of auditurand and an attempt made to land it before it has been killed on the rod, thus curtailing the real sport of angling and at a great risk to the angler's tackle. I speak of this now, for I have heard anglers praising a rapid working quadruple multiplying reel because they could reel in a fish "so fast," basing all of its merits upon this one quality; the desire to get, possession of the fish seeming to be paramount to the real sport of hooking and playing it.

Click reels are all constructed upon the same general winding that the constructed upon the same general

Click reels are all constructed upon the same general principle, but are of various patterns and composed of various materials, being made of hard rubber, celluloid, brass, bronze and Gertuan silver: their weight depends on the material used, and the angler has a large assortment of styles and prices to select from. Any good trout click reel is suitable for black bass fly-fishing, and can be furnished by any of the first-class dealers who advertise in ROREST AND STREAM.

The "Orris red" answers as well as any; it is simple, durable and inexpensive; is extremely narrow and takes up line rapidly, while the perforations render it light and assist in drying the line and in freeing it from sand and

grit.
Abbey & Imbrie make a superb reel, the "Abbey," com-posed of hard rubber, with German silver spool, rim and fittings; it is extremely light and has a protected bandle to prevent fouling of the line in casting, and is first class

in every respect. Nos. 3 and 4, the latter being the smaller, are the proper sizes. The "Imbrie" reel, also made by this firm, although a multiplier—and a most excellent one, by the way—has an adjustable click which allows of its being used also for fly-fishing. And the angler who is the fortunate possessor of one of these reels can use it in black bass fishing for either his minnow rod

can use it in black bass using for either his number voor fly-rod.

Win, Mills & Son's reels are unexcelled, either brass, German silver or rubber; they are fitted with protecting bands to prevent the line from catching on the handle. Their thirty or forty yards reels are the correct sizes for black leaving.

bands to prevent the line from catching on the handle. Their thirty or forty yards reels are the correct sizes for black bass lly-fishing.

The "Leonard reel" is probably the lightest metal click reel manufactured, and holds a great deal of line for its size, being of good width. It also has a flush handle to prevent fouling of the line; two and a half inch diameter is the preferred size for black bass angling.

Conroy, Bissert & Malleson, of New York, A. B. Shipley & Son, of Philadelphia, and Bradford & Anthony, of Boston, also furnish the best reols and other tackle for fly-fishing. I think it but simple justice that all of these houses, who are by an honorable competition doing so much for the angler in the way of producing the most elegant and suitable tackle, should be brought to the notice of the angling fraternity occasionally by those who have used their goods satisfactoris.

The click reel is placed at the extreme but of the fly-rod, below the hand-grip, where it adds much to the balance and general working of the rod. As the click regulates the readering of the line, and as the narrowness of the reel obviates the recessity for guiding the line in recling, it is placed out of the way, at the extreme but, and "where it will do the most good." A reel should always be placed underneath the rod, and not on top, as is often done.

FLY-LIKES.

FLY-LINES.

The reel line for fly-fishing must necessarily be heavier than the line used in bait fishing, the greater weight of the former being required to cast objects so light and delicate as artifical flies, while in the case of the small and light bait-line, the minnow, swivel and sinker give the required weight for casting. Increased weight is obtained by increase of the caliber of the line; so a fly-line is consequently of a layer size them a bait-line.

so brained by increase of the caliber of the line; so a fly-line is consequently of a larger size then a bait-line. It is a larger size then a bait-line. It is a larger size then a bait-line. It is the swere employed allogether by the bestanglers for fly-lines, but they have been almost entirely superseded by the really elegant tapered and enameled waterproof braided slik line. The latter is the line pure excellence for all kinds of fly-fishing, being smooth, round, polished and perfectly waterproof, and is just stiff and heavy enough to favor a perfectly straight cast, without looping or kinking, qualities that are peculiarly essential to this mode of angling. Those who have used the old-fashioned fly-lines, are prepared to speak feelingly and appreciatingly concerning the great superiority and excellence of this line.

mode of angling. Those who have used the old-Inshioned Hy-lines, are prepared to speak feelingly and appreciatingly concoming the great superiority and excellence of this line.

They are made in several sizes for salmon, black bass and trout fishing; are very strong and serviceable, and can be purchased in lengths of from twenty-five to one hundred and twenty yards. They are fashioned with a regular and gradual taper from the reel end to the fly-end, the dy-end gradual taper from the reel end to the fly-end, the dy-end gradual taper from the reel end to the fly-end, the dy-end gradual taper from the reel end to the fly-end, the dy-end gradual taper from the reel end to the fly-end, the dy-end; salmon lines usually taper both ways from the middle that the gradual taper from the waters, sky and foliageonizes well with the tints of he waters, sky and foliageonizes well with the tints of he waters, sky and foliageonizes well with the tints of he waters, sky and foliageonizes well with Nos. 3 and 4, some dealers designating the sizes by letters, others by nunerals.

The old hair line is still used to some extent, but it is o,en to many objections. Af best it is a weak line, and soon rots and becomes worthless by use, even with good care. The ends of the hairs recome frayed and separate after a time, and are a constant source of annoyance by sticking out at various places on the line, preventing it from working smoothly and freely through the rings of the rod. When used for black bas angling, the size suitable for trout fishing will answer, and the length should be about thirty yards.

Next best to the tapered enameled silk line, is the ofield braided silk line; though this is not tapered it is a good, strong and useful line, and is used by many anglers in preference to all others. It is tinted of a similar shade to the enameled line, and altogether is a very satisfactory fly-line, being heavy enough, and withal, cheaper than the tapered line. Letters B and F, or Nos. 3 and 4, are suitable sizes.

Next in order is th

LEADERS

Black bass leaders should be six feet long, and composed of the best single Spanish silk-worm gut, heavy and strong hard and round. The gut lengths should be perfectly clear and sound, quite smooth, and without inequalities or rough places. The rod-end of the leader should be composed of a large-sized gnt, the next length a trifles maller, and so diminish by a gradual taper to the fly-end. The

several lengths should be neatly and firmly knotted to-gether by what is technically known as the double water-knot. The ends should be cut off closely; or, if the single water-knot is used, the ends should be first wrapped with silk waxed and varnished, and then cut off neatly

with silk, waxed and varnished, and then cut off neatly and closely.

It should be remembered that it is necessary to soak and softon the ends of the gut-lengths previous to tying. The water-knot, if correctly tied, can be easily slipped apart and the snell of a fly inserted, when it is to be securely drawn together again, the snell having a knot tied on the end to prevent its pulling out; but more of this

Some leaders are now made with loops for attaching

Some leaders are now made with loops for attaching the flies, which is a very convenient and expeditious way, but the old method is still much in vogue, and both plans have their advocates.

Too much care cannot be exercised in selecting the leader, for upon its soundness and excellence depend much of the pleasure and success of the flishing. It should be carefully examined in every inch of its length, and the knots closely inspected. The leader should always be stained some suitable neutral tint; either a slightly greenish, grayish or smoky hue will answer. Strong green tea, diluted black ink, or a weak solution of indigo, make good stains. The leader should have a loop at each end, for attaching the reel line and stretcherfly.

T will not enter into the details of making leaders, as 'I will not enter into the details of making leaders, as they can now be purchased so cheaply, and of such superior excellence, that the amateur can hardly hope to equal them, even were it necessary. The leaders known as "mist-colored" are all that can be desired, and the angler can have them sent by mail from any first-class dealer, who will select them "upon honor." I will only add, beware of double or twisted leaders; they are an abomination to the black bass fly-fisher.

Combinator For Man 25th.

J. A. HENSHALL.

Cynthiana, Ky., May 25th.

Maine—Lincoln, May 26th.—In the town of Topsfield, forty miles cast from here, is a small lake nearly two miles long by about fifty rods wide, which is one large boiling spring, having no visible inlet and but one small stream running from it, in which are the gamiest land-locked sahaou and salmon trout it has ever been my good fortune to struggle with. Prof. Mills and I made a hurried visit to it the other day, fishing from 5 to 9 o'clock A.M. We caught, after most exciting sport, ten beauties, the smallest of which weighed two and a half pounds.

F. C.

pounds. F. C.

MAINE TROUT,—Mr. D. J. Flanders, Gen. Pass. Agent of
the Boston and Maine Railroad, is a disciple of Izaak
Walton and an expert fisherman. He captured on the
Upper Dan, Rangeley Lakes, last fall a trout weighing
64 bs. Under Mr. Flanders' supervision the angling tourist is always well treated on the Boston and Maine road,
which is the favorite route among those who have once
been over it. The rates of excursion tickets from Boston
and return, as now issued, are: To Andover, \$9; South
Arm, \$12; Middle Dana, \$13; Upper Dam, \$14; Indian
Rock, \$15.25; Upton, \$11; Greenvale (Rangeley Lakes),
\$12.50; Indian Rock (Rangeley outte), \$13.75; Indian
Rock (in via. Phillips, out via. Andover, or vice versa),
\$15.25; Forks of the Kennebec, \$13; Mt. Kineo House,
\$15.

MAINE TROUTING.—Newport, Mc., May 24th.—Have just returned from a trout fishing trip to Kingsbury Stream, which emptics into the Piscataquis at Abbot Village, on the Mooschead Lake road. The water is a little too high yet for first-class fishing, and is still discolored by surplus water from the swamps. No trout in eddies or deep holes, but all on the ripples, feeding on winged ants, of which insect their throats were full, and they in consequence were semantial fastillates in versue. eadies of deep notes, but an on the rippies, feeding on winged ants, of which insect their throats were full, and they in consequence were somewhat fastidious in regard to the lures prosented; but the flight lasts only three or four days. We counted 100 tront as the result of a little over half a day's fishing with two rods after returning all the smallest ones. By the time this reaches you tront fishing will be nearly at its best in the upper part of the State. I think the black flies are going to be unusually plenty and uncommonly savage this spring, and would advise all anglers not to venture into the woods without a liberal supply of green tar and sweet oil, mixed in proportion of three parts of the latter to one of the former; it is by far the best preparation made to keep off flies, lasting four times as long as oil of pennyroyal or peppernint. It is also excellent for improving the complexions of those whose occupations keep them within doors, as a single day's application will give them a color which would cause a Fute to blush with envy. Penoiscor.

Blue Fishing.—Riverside House, Forked River, N J. BLUEFISHNO.—Riverside House, Forsed River, N. J., May 29th—Plenty of bluefish now in the bay near the Riverside House, catches of twenty-five or thirty being the average per boat the past week. They run from two to four pounds and make fine sport. Weather warm, and we look for good fishing of all kinds from

SHAD AND FLY.—Plainfield, N. J., May 28th.—It has long been a question of veracity on the part of the disciples of Lzaak Walton, especially in this section, as to the possibility of catching shad with hook and line. That question is, however, settled at last in the affirmative, Last Friday, three gentlemen, members of the New Jersey Game and Flish Protective Society, visited the Raritan River, in the vicinity of the dam below Bound Brook, with two purposes in mind. One to see that the law was being obeyed regarding the hauling of nets at that point, and another to whip the stream with flies for duce, perch and sunfish. While enjoying the latter sport, the writer was so fortunate as to have a shad strike the lead fly, and after a tusel of some fifteen minutes succeeded in landing the fish, which weighed \$\frac{3}{2}\$ pounds. The rod used was a nine ounce Orvis. Although much heavier black Shad and Fly .- Plainfield, N. J., May 28th. ing the fish, which weighed 3\(\frac{1}{2}\) pounds. The rod used was a nine ounce Orvis. Although much heavier black bass have been killed by this rod, in season, we must say that this shad possessed great strength, and gave more sport and excitement in its capture. Keep the nets out of the river and rare sport is in store for the anglers.

The Rennel.

THE BEAGLE JUDGING.

HAT we have printed the below communications in full, in spite of their very outspoken criticisims of the late bench show judging, is the best evidence we can offer that it is our aim to afford the largest liberty to our correspondents consistent with the limits of our space. when they do not themselves overstep the limits of propriety. In our mind, no healthy subject can be injured by proper ventilation, but at the same time the true object of such airings must not be lost sight of, While it is the universal impression that the animals at the late show were to be judged by Stonehenge's points, we have been told that all the judges did not construe Rule 8 as a direction so to do. The rule in question reads as follows :-

The scales of points given in the third edition of the "Dogs of the British Islands," by J. H. Walsh (Stone-henge), will be used by the judges, when necessary, in judging the dogs.

Therefore, cannot it with justice be claimed that in the majority of cases the judges did not deem it necessary to use said points?

Whatever may be the adjustment of the differences of opinion in the past, it is patent to us that a reform must at once be adopted for governing the proper judging of dogs in the future. We believe the time has come when there can be no difficulty in instituting a proper standard of points, and upon finding plenty of good judges, "those to the manor born," to see that the rule of judging by this standard is carried out. We have always been opposed to three judges, and to English judges; where there is only one, he is very careful, for he cannot lay the blame on anybody but himself. Therefore, in the future let us have American judges-let them be specialists, and let each one be detailed to judge his own individual classes. This will narrow the matter down, and in the future we will have our own countrymen to pick to pieces, and thus save our guests-the foreign judgesfrom the abuse that is always heaped upon their heads by unthinking people the moment their backs are turned upon our shores.

Turning now to the subject in question, we may say that the standard of perfection of the beagle thirty-five years ago was considered to be from ten to eleven inches, and the latter was the maximum height. Stonehenge advises that they should not be bred under 9 inches, and Mr. Dalziel, in his admirable book, "British Dogs," gives the measurements of two good dogs, one 14s inches and the other 15 inches. The former authority states that it is said in the time of the Virgin Queen, Bess herself possessed a pack so diminutive that they could be carried in a man's glove. This statement, of course, must be taken cum grano salis. Had we been told, however, that a pack of beagles had been wont to repose, in the time of the Roundheads, in the hat of Oliver Cromwell, the one now shown in the armory of Stirling Castle, we would have believed it beyond all question. But it is not in this crude way must we size the merry little bound spoken of by Oppian as one of the kind of dogs peculiar to the ancient Britons :-

There is a kind of dog of mighty fame For hunting: worthy of a fairer frame;
By painted Britons brave in war they're bred,
Are beagles called, and to the chase are led, Their bodies small, and of so mean a shape You'd think them curs that under table gape

It is a mere question of inches-in our opinion we want a practical dog of about 12 to 15 inches for our rough, stony hill-sides, and when they exceed that measurement exhibitors should furnish the judge with a pair of far-seeing glasses, so as to reduce in size the animals before him and spy out in the future his impending fate.

GRANBY, Conn., May 24th.

Editor Forest and Stream:

Editor Forest and Stream:—
By the request of several prominent breeders of beagles
I took notes and measurements of entries in that class—
prize winners in particular—and am compelled to say that
such unaccountable judging as was shown in the award of
prizes in that class it has never been my misfortune to

prizes in that class it has never been my mistortune to witness before.

An overgrown animal, measuring 16 inches high at shoulder, was given first prize.

The second prize was captured by another oversized specimen, standing 16j at shoulder, and I should judge would turn the scales at 26 pounds. Head had a snipy, whittled-out look that was anything but hound-like in expression, and ears were short in leather and set high. The giving of third prize to a dog standing over 19 inches high at shoulder, and that must have weighed 30 pounds, is what I wish to say most about. We have read in the works of Stonelienge, Herbert, and many others, that a beagle is a diminutive hound; in fact, a "pocket edition of the old Southern hound," and should have the long ears "that sweep away the morning dew," and acedition of the old southern hound," and should have the long ears, "that sweep away the morning dew," and according to that high authority, The Fancier's Gazette, should not exceed 15 inches in height; but the honorable judge did not consider size any barrier to success, and gave prizes to oversized animals that would rain the equitation of any breeder who should send them out as taugites.

o beagles recently imported by the Essex County

Hunt were not shown, as they measured 16 inches high, and were very justly considered oversized by the club. Why the judge should overlook such dogs as Ramber, Lottle (winner of first at New York in 1879) and Charley (second at New York in 1879) is a mystery to us that we hope the judge will kindly explain, and if dogs 19 inches high and weighing at least thirty pounds are beagles, we hope the judge will tell us what a harrier is.

N. ELMORE.

Montclair, N. J., May 24th.

Editor Forest and Stream:—
I wish to call the attention of the several breeders of pure beagles to the fact that the standard of excellence is going up a peg in size. According to the awards at the I to bench show the winners were from 15 inches up. It used to be from 12 to 15, but not one of the prize winners in the above class were less than 15. The third prize was awarded to a dog that I know was 169 inches high at shoulders. The others I did not measure, but someone else did. The Essex County Hunt Club imported two splendid bitches. They arrived about three weeks ago, in good condition, so I had a bench show of my own to decide which I should take to the show. The late arrivals, however, lost the chance of seeing Madison Square Garden just because they measured full 15 inches at the shoulders; but they are beauties, for all that. Editor Forest and Stream

The late arrivals, however, loss the comment of Madison Square Garden just because they measured full 15 inches at the shoulders; but they are beauties, for all that.

One of the judges in last year's show censured me for taking a bitch into the ring that measured 15 judies. I tried to rub the half inch off her feet with sindapper, but I couldn't fetch it. He (the judge) said 8'10 was no "bagle." I thought of setting the dog onto him, but he gave me third prize with another dog, and 51 bet up on him and promised to be more careful in my selection for future bench shows, and I was, for instead of taking a couple of 15 inch beagles, I took one 124 inches and one 131 inches, and got beaten with two 14 inch ones. I believe, Mr. Editor, that if I had taken a couple of 18 inch hounds I should have got first and swond, sure. On meeting the aforesaid judge in the building, I asked him what he called a beagle? He building, I asked him what he called a beagle? He builded at me and said, "What did I tell you last year?" Of course I forgot, but I hadn't, so I took him around 15 the kennels and asked him to point out the best two. Well, he just went and showed me my own two. He said the others were "duifers," oversized, and that he never saw a "bagie" over 15 inches; but, alas, I had to stand it when the prizes were given, although I did get immorable mention, and the dogs that took first and second hast year did not get a smell. The above gentleman was not a judge this year, so I had I can be ready for em. I will try and ring in the right ones if I can find out.

I will try and ring in the right ones if I can find out.

II. II.

The Cocker strouse at the show.—Buffulo, N. Y.,

May 24th.—Editor Forcet and Stream:—I am a breeder
of cocker spaniels in a modest way. I have visited several bench shows, but saw few specimens that I fancied
better than my own. In securing my original stock I
was always very careful to avoid curly coats, or dogs
with topknots. At an expense of upward of \$50 I visited
the late Now York Dog Show, principally to view the
poize winners in the cocker classes, and compare my
leas of a standard dog with those of the judges. Intngine my surprise and disgust, when first was awarded
i the dog class to the poorest specimen in the show. It
could boast of a topknot very similar that of Mr. Holabird's champion Irish water spaniel dog Barney. When
I stu this dog, previous to the judging (?), I wondered
I lew a person could be foolish enough to enter such a
specimen in the cocker class. Now this award looked to
me as if the judge knew but very little of what constituted a cocker spaniel. I heard it stated that he claimed
that there was not a genutine cocker spaniel in the show.
For argument's sake we will concede this, or that there
is not one in the United States; and I presume he will
admit, that such a cocker is a rarity, even in England—
the original home of the breed. But that there were
sweral specimens in the dog class which were greatly
superior and came much nearer the standard of Stonlength that the color is a standard that bench shows adverties the dogs are to be judged by, when prizes are
warded to such miserable specimens as the one in question. I am not a disappointed exhibitor. The only dog
that I owned an interest in at the show was awarded first
prize in his class, with, I believe, eight competiors.

Cocker.

THE TILESTON MEMORIAL FUND.

EASTERN FIELD TRIALS CLUB-New York, May 8th. - The un-EASTERN FIRM THATE (LEGEL-AND FORM AND SOC.—120 uni-designed, a committee appointed by the Eastern File of Trials Club, for ceive subscriptions to the Memorial Fund, to accompany the resolutions of symaphy to the family of the late Wm. M. Tileston, Esq., of this city, respectfully solicit your cordial and carnest cooperation in this land blue undertaking.

YACHTING NEWS.

Notes From San Francisco.—The yawl Emerald, which was for so many years cock-of-the-walk in San Francisco Bay as a Bermudian sloop, has been thoroughly overhauled. She has a Bernudian sloop, has been thoroughly overhauled. She has a new dock and her spars have been reset. Her catch has been rulsed to give standing room. She was an old-style yacht, with low freeboard and very low eatin. She has been fitted up handsomely. The Emerald can still crowd some of the larger yachts. Mr. J. Clem Chiler, for many years a leading member of the San Francisco Yacht Club, and an enthusiastic yachtsman, has gone to New York to live. Mr. Unler was owner of the yawl Emerald. His fellow members of the club rulss him greatly, as he has taken very great interest in building up the organization, and is a genial, bessent companying. The sloop (Jarg, which was brought for the property of pleasant companion. The sloop Clara, which was brought from New York to San Francisco on a vessel's deck two years ago for New York to San Francisco on a vessel's deck two years ago for Jabez, Howes, Est₁, is now the property of Jno. Rad Hamilton, of the San Francisco Vacht Club. Mr. Hamilton has refuted her and put her in first-rate shape. Her cabln has been raised to give head room, and her interlor fittings are now very handsome. She has had 1,000 pounds of lend put in her keel, which makes her stand up very much better. Before Mr. Howes sold her he had her stern remodeled and lengthened, so she is now, with the new improvements, very much better adapted to San Francisco waters than when she arrived. Mr. Hamilton has her jibs arranged so as the set as the second of th than ward six arrived. Buglish fashion in strong broczes. The yawl Kappho has been thoroughly overhauld this winter and has just been launched in a greatly improved condition. She has been lengthened eight feet, and is now forty-one feet water line. Her cabin has also been raised and lengthened, the additional Her cabin has also been raised and lengthened, the additional length giving two state-rooms. She has now an enormous sliding topmast, the second one of the kind in San Francisco Lay, the first one having been put on the little yawl End some three years ago. Her topsail has as much hoist within ten feet as the mainsail. Her driver, or "Jigger," has been changed from a gail to lee of mutton, and she is now fitted with a flying jib. Win, Stone, the builder, made a very neat job in lengthening the Sappho. Her name, by the way, has been changed to the Loilta. With the yawl rig and big sliding topmast the Loilta can carry a very large or very small amount of sail, the change being made very quickly and readily, the whole being very weil adapted to San Francisco waters, where the winds are strong in the afternoons and light in and readily, the whole being very well adapted to San Francisco waters, where the winds are strong in the afterneous and light in the mornings. The sloop yacht Annie, formerly of New York, and brought on the ship Three Brothews to San Francisco for Jubez Howes, Esq., last full, has been very much improved since her arrival at the latter port. She fairly glitters with brass work, etc., now. Her cabin has been thoroughly overhauled, new cushions, new carpets, new paint, etc. Oil paintings have been put on the panels, mirrors added, convenient dish lockers, signal lockers, etc., put in. Her iron work and rigging have been replaced, gratings put in cock-pit; and in fact she does not look like the same vacht. Although she carries very much less sail than she sanny yacht. Although she carries very much less suil than she did in New York on the race down from Mare Island on the first cruise of the San Francisco Yucht Club this season, she came in third, the California boats Chispa and Consuclo alone beating her.

A PRETTY MODEL—Mr. Rushton, of Canton, N. Y., has sent us a beautiful model of his traveling canoe. It is about 4ft, long-regularly built up, and shows all the rivets and details of a full-

A HANDICAP MATCH.-The Secretary of the New York Y. C.

A HANDICAP MATCH.—The Secretary of the New York Y. C., Mr. Chas. A. Minton, has offered a cup, to be sailed for by yachts of the cluth, upon a bandicap measurement, as under:—
The race will be sailed on, Friday, June 11th, over the regular club course, for a cup valued of \$250, presented by the Secretary for competition by schooners and Sloops of the club. Yachts will not be restricted as to sails, or in the time of making the race. It has been decided to adopt, as the most fair and simple method of handleapping the various classes and rise, the scale annexed. Time allowances will be made according to the usual rule of the N. Y. Y. C., and the race will be sailed, with the exceprule of the N. Y. Y. C., and the race will be sailed, with the excep-

rule of the N. 1.5 (2.6), that the race will be sinced, with the exceptions noted, in accordance with its regulations.

Entries should be made in writing to the Secretary of this committee, Mr. W. Lindsay Blatch, at the could house, before S. P.M. on Jinne 9th. To cover the expenses of the committee back materiance fee of \$20 will be required from each yacht tentering: y excess will be returned,

Any excess will be returned, Owners of yachts entering can produce three tickets each from Mr. F. W. S. Hurst, 60 Broadway, for the committee boat, which will leave the Battery at 9,59 A.M. precisely on the morning of the race, and the Ferry Landing at Stapleton at 10 Octock, stopping

at the same points returning.

In the event of the Annual Regatta of the club being postponed until the 11th, this race will be sailed on Wonday, the 14th. Committee—F. W. J. Hurst, J. Fred is Tama, W. Lindsay Blatch. In calculating time allowances, the following percentage of cubical contents of each yacht will be taken as her measurement: First-class tend schooners, 60 per cent.; second-class keel schooners, 70 per cent.; second-class center-board schooners, 75 per cent.; first class keel sloops, 80 per cent.; first-class center-board sloops, 85 per cent.; second-class keel sloops, 80 per cent.; geomic-class keel sloops, 80 per cent.; geomic-class center-board sloops, 80 per cent.; becomic-class center-board sloops, 100 per cent.

Battries to be made to Mr. W. Lindsay Blatch, at the club house, before 8 p.M. June 9th. Sailing rutes can be fobtained from the

same source. Start, flying, off Stapleton, S. I.; ten minutes al-Course, to and around bour No. 10 on S. W. lowed to cross the line. Course, loand around bouy No. 1000 S. W. Spil, keeping it on port hand, thence to and around Sandy Hook Light Ship, keeping it on starboard hand, and return by same course. Keep to castward of houys 9, 11 and 13 on West Bank, to course. Keep to castward of hours 9, 11 and to on west man, is southward of 81 on S. W. Spit and outside 52 on the Hook, going and returning. Finish between committee boat and bouy No. 15 on West Bank.

SEAWANHAKA YACHT CLUB.-The following member been added to the olub list: Messrs. James Clinch Smith, Fred. Gebhard, Geo. B. Chisolm and S. Nelson White. The citth has declined to join the N. X. A. for the present. The annual cruise has been fixed for July 13th, rendezvous at Glen Cove. For the Corinthian matches, June 12th, the following rules to be ob-

Comminances, Served:—
The race will be open to yachts of the New York, Atlantic, Eastern and New Bedford Yacht Chub, and will be governed by the sailing regulations and time allowances, and under the direction of the regatat committee of the Sewamhaka Yacht Chub. Fivo prizes are offered; one in each class in which two or more adversary, and personal prizes to each member of the winning.

yachts start; and personal prizes to each member of the winning

Classification .- Schooners .- Second class; all whose area is 1,950 Classification.—Second class; all whose area is 1,400 square feet or less. Value of prize, \$100. Cabin Sloops.—First class; those whose area is greater than 900 square feet. Value of prize, \$100. Second class; those whose area is 900 square feet or less, and greater than 600 square feet or less, and greater than 600 square feet or less, and greater than 600 square feet or less, and greater than 600 square feet or less, and greater than 600 square feet or less, and greater than 600 square feet or less, and greater than 600 square feet or less. Value of prize, \$50.

Rules for Measurement .- Add the length over all to the length Rules for Measurement.—Add the length over all to the length on the water line, and divide the sum so obtained by two; this will give the "mean length" of the yacht. Multiply the mean length and the estill will give the "area" in square feet. Length over all will be measured from the after end of the planksheer at the middle of the stern, to a point perpendicular to the forward end of the load water line at noint perpennicular to the lorward claus this losal water hie at the upper line of the planksheer, or a point corresponding thereto, if the planksheer does not extend so far. Eutries must be made in writing, addressed to the Regatta Com-mittee, and filed with the Secretary of the club, O. E. Cromwell,

Yachts in Corinthian races must be manned by amateurs ex-Yachts in Corintian races must be manned by amatours ex-clusively. The salling master, cook and steward, if carried, shall remain below, and not appear on deck; and none of them shall in any way direct or assist in the management or working of the yacht. Any infringement of this rule will forfeit all claim to the prize. Every yacht sailing in any match or regatia shall have on hoard during ruch race a momeber of the club. Each yacht shall be sailed and, as far as possible, steered by her owner or by a mem-ber of the club to which she belones. Schooners will be re-stricted to headsails, maincail, working-guff-topsail and spinaker. No two headsails of the same name shall be carried at the same National to measures, manifold, working-gail-topsail and spinaker. No two headsails of the same name shall be carried at the same time. Balloon jibs will not be allowed. A working-gaff-topsail is a jib-headed-topsail that does not extend above the truck nor beyond the gaff end.

Flying start at II.A.M., at second whistle from olub steamer. Ten

Flying start at 11 A.M., at second whistic from old betainer. Fen minutes allowed to cross the line. Course for all but fourth class, from line between steamer and Fort Wadsworth around buoy Io on Southwest Spit, keeping it on port hand, thence around Sandy Hook Lightship, keeping it on starboard hand, and return over same course. Fourth class will round Gedney's Channel buoy, Keeping it on starboard hand, instead of lightship. Keep to castward of buoys?, 11, 13, and outside 5i. Finish at starting to eastward of buoys 9, 11, 13, and outside 54. Finish at starting line. Regatta Committee, James H. Elliot, C. Wyllis Betts, Louis P. Bayard, Robert Center, Giraud Foster.

Lynn Yaght Cath.—The oilicers for 1880 arc: Commodore, R. C. Neal; Yice-Commodore, E. G. Souther; Fleet Captain, H. Dennis; Secretary, C. G. Viall; Treasurer, C. H. Clifford; Measurer, C. H. Taylor.

JEFFRIES YACHT CLUB.—The officers for ISSO are as follows Commodore, William McCormick, yacht Gad; Yice-Commodore Frank H. Blancy, Empress; Filect Captain, George P. Tenney, Vision; Measurer and Secretary for the committee, George A. Palmer, of yacht W. B. Ford. The club has seventy-eight members, and owns a club-house at Jeffries Point, East Boston.

SALEM BAY YACHT CLUB,-The club now numbers among its fact some of the finest yachts on the coast. There are forty en-rolled in the club, and new ones are constantly being added, Four of the yachts measure over 70ft. in length, and twenty are 30ft. and over. The new club-house will be supplied with a sightly tower, with halcoules on the first and second hores, attording an ample view of regatins. A library of yachting and nautical litera-ture will be one of its attractions. The handing facilities and the arrangements for the care of yachts will be very complete. Moresurrangements for the care of yacins will be very complete. Mooring buoys for club and visiting yacibts will be conveniently located. Arrangements will also be made for the laying-up of yachts and boats in winter. The club has now about one hundred members. An application for membership for Gen. B. F. Butler's schooner America has been received.

MORE LEAD .- The Vision, of Boston, has had a heavy lead keel added, and the cat boat Louis has received an iron one

CRUISE OF THE CASCO.-Dr. Merritt left San Francisco May 8th, in his schooner Casco, for a protracted cruise in the South Seas. We have a photograph of her, showing her to be a fine, wholesome looking craft. She was built in 15% at Oakland Greek. Length over all, 86ft, w.l., 88ft, draft, Ifft, beam, 22ft, with a lead keel. The party on board consists of two ladies and three gentlemen in the cabin, and a sailing-muster, cook and steward and four hands before the mast.

TO EUROPE IN A NUT-SHELL.-Two young men from New TO BRIGHE IN A NULSHELL—TWO young men from New York State, George P. Thomas and Fred Norman, are baving a Birle boat 17tf. long built at Glowester, in which they fixend crossing the Atlantic and visiting many of the leading European ports. They will start about June 1st. It is the smallest boat that has ever made the attempt. The craft will be named Little

LAUNCHED .- Our Salem correspondent sends the following: In Beverly, the Rock Bros. have launched a fine, new sloop, 30ft. over all, 10ft. 6in. beam, 23ft. w.l. She will Join the Nautilus Yacht Club, of Salem.

THE COUNTESS .- The Countess of Dufferin, schooner, famous as having tried for the America cup some years ago, has been thoroughly overhauled and caulked at Kingston. She will hail from

CLEVELAND YACHTING ASSOCIATION,-The coming regatta CLEVELAND TACHTIM ASSOCIATION.—The coming regatta. Open to the lakes, July 5th, promises to bring out the satiling, the Buffalo, Detroit, Chicago and other cluts having signified their intention of being present. There will probably be three classes of yachts, with first prizes of \$100, \$75 and \$90, and lesser ones for second and third. The employees of Morgan, Root & Co. have purchased the schooner Star, of Sandusky, re-named her the Capoline, given her new spars and outif. Mr. A.-Van Tuyl will do the skippering. The club will go on a cruise in July to Sault St. Marie. The Lyman Bros. have launched a new schooner, the Syrius, and are building another for themselves.

SOUTHERN YACHT CLUB,-The first racing of the s The matches being open to first-class and fourth-class yachts of the club, with professional crews. Prizes, respectively, \$150 and \$50. Of the fourth class none showed up, probably because a Some of the tourner enes nome of their owners' zeal. A large crowd had congregated at the club house, on the shore of Lake Pontchartath, and ladies were a conspicuous adornment among the thousands of spectators. The whole city of New Orleans takes a deep felt inferest in the yacht races, riewing them Orients takes a deep left introces in the years takes, which is the North. Pools are sold on the favorites, and money changes hands at a rate which shows that business in the South cannot be at a standstill, but must be decidedly thourishing. The lively people of the Oresent City might well send our fright public in the of the Crescent City might well send our frigid public in the North a little of their animation, for here the crowd hardly rises to a cheer for the winning yacht, unless spurred on by the pres-ence of personal friends of the lucky craft's owner; and as for betting, the general public at our races could not tell a schooner from a frigate, or a sloop from a Venetian gondola. New Orleans possesses some of the fastest jib-and-mainsails in America, im-ported from the North as well as built at home, and the older hands have got the knack of getting the nost out of them as well as we in New York; consequently the public down there expects to see no mere bungle among local mud-scows, but gathers to witness racing, which for pluck and dare-devil carrying on, canwitness racing, which for priors and dare-devit carrying on, cau-not be surpassed in the more temperate latitudes. Moreover, the Southern Yacht Club seems to be distinguished for excellent management, and all work in harmony in the most commendable manner, elfqueism and localism being banished entirely from its manner, eliqueism and localism being banished entirely from its proceedings. The entries in the first class were: Startle, 27tt. 11fin., C. T. Howard; John Clemens, sailing master. Albertine, 2ttf. 11fin., A. Brewster; Alox. Browster, sailing master. Laghane, 2ttf., E. Harris; Edwin Harris; Salling master. Lagh Emma, 2tf. 21fin., E. L. Israel; John Curner, sailing master. Pluck and Luck, 2tf. 11fin., E. L. Israel; Alnoine Ryan, sailing master. Course, traingular, five miles, sail thrice over, making fifteen miles in all. Wind S.E. by E., light, but an ugly sky promising plenty before long. Judges: W. J. Hare, J. B. McConnell and J. D. Huger. The start was from an anchor, and to the first mark it was a dead beat with a seven-knot wind. At the gun Laub D. Huger. The start was from an anchor, and to the first mark it was a dead beat with a seven-knot which. At the gun Ladiy Emma paid off first, Pluck and Luck: second, then Albertine, Oydmus and the now Skortle Foulling. The latter soon doused her topesail. Emma fotched the murk first and Cydmus got around a good second. Startle had sold high in the pools, but seemed to have the usual poor luck of a new and untitled boat. To the second mark balloon jibs were in order and a siashing pace was made, Emma gadinig on all hands, Cylnius still a good second, Pluck and Luck third, Albertine nearly a minute later, and Startle still in the rear. She was not still emough, and had to be brought out of it too often for her good. Pluck gave up, leuking like a basket, and she could not be keep alload any longer. The wind had freshened too often for her good. Putch gave up, bedding like a basket, and she could not be kept adout any longer. The wind had freshened into a snorter, and the strain on hull and rig was terrific. Suddenly the Lady, a winner up to this moment, Jumped Into the wind like a flash, bowspril gone short off at the stem and jib, and the wreck trailing along-side, forcing her to come to an anchor and ending her chances for the pot. Abortine took wrong course, letting Startte in for second. Cydine increased the gap steadily both she and Startte taking a very bad knock down to a flaw, the former finally landing the purse for her owner after a hard and Albertine third in 2h. 2ba. 7s. And of course the enthusiasm of our Southern friends was justifiable, for had not a genuine Southern built ship heaten all the Northern Byers? Booming of cannon and the shouts of the multitude littingly celebrated the event. The Cydine, now holder of the Challenge Cup of the club, was built by Octava Tommon, of Algieries, a colored boat builder, event. The Cydnus, now holder of the Challenge Cup of the club, was built by Octave Tommo, of Algiers, a colored bont builder, who learnt his trade with John Mahoney, and his skill at modelling is now held in high esteem. The Startle was a Northern production from the yard of Pat. McGiehan, who was there to coach his latest enhalt or victory.

The randing on May 27th was open to second and third-class professionals. After a threatening morning, which did not deter a large crowd from collecting, a start was effected a little after \$\text{N.T.} = \text{Collecting}.

4 ... J. De Buys ... R. Dolbear 1 ... A. A. Maginnis ... Ant. Syan J. H. Beban ... M. Green Juniata 19 114 Gipsy Maggie*

* Not measured.

The wind soon picked up and a little sea drove in from the N. The Wills sook praces by an early and the rest lagain to almost calm. As it was growing late the course was shortened to five miles, or once around the triangle; prizes cut down to \$50 and \$25 in each class. Xuphias and Plantom withdraw. Maggio took the lead in light airs, the No Name, a new boat, soon out-winding hear; Puck meet and Glysg following, but holding a good luff, with Juniata and Maggie bringing up the rear. At the first mack Gipsy had screwed out on the weather of the let and rounded first with a long lead. It then fell a flat calm, and the rest of the race torned into a drift, all hands depending upon slants to take them home, which they reached as follows: Juniata, 7h. 3lm. 4ss.; Ulpsa, 7h. 28m. 7s.; No Name, 7h. 40m. 2s.; Puck, 7h. 55m. 3s.; Mugges, 7h. 55m. 48. A protest was entered against Juniata for sculling with her rudder, and Gipsy owned up to the same impeachment. The decision of the judges has not yet been rendered. No Name wins in the second class. The regular regular regular as proponed to the next day, the above being in reality only a soruly made. then felt again to almost a calm. As it was growing late the course reality only a sorub match

KNICKERBOCKER YACHT CLUB.—The club sailed its annual regatta on Decoration Day, May 31st, and a fair number of yachts came to the line, where course for the first and second classes. ATLANTIC YACHT CLUB.

THE customary annual "opening cruise" of this club has best come deservedly popular. The A. Y. C. was the first to institute this feature which has since been followed to advantage by others. The invitation extended to the friends and acquainfold the property of the commodition of the club, has done much to introduce a fresh element for the sport from year to year and has been the means of turning the aport from year to year and has been the means of turning the attention of many a landsmen to the advisability of domining sea togs and following the bring deep for good, honest and whole table, cards or in the rocking chair. Every season the number of yachts following the bring deep for good, honest and whole table, cards or in the rocking chair. Every season the number of yachts following the Commodore out to the Spir and lanch has been increasing in numbers, no less than 18 sul, hearly all of considerable forming, answering the starring cut this season, on 19 feet and the control of the start of the starting cut this season, on 19 feet increasing in numbers, no less than 18 sul, hearly all of considerable forming, answering the starting cut this season, on 19 feet increasing in numbers, no less than 18 sul, hearly all of considerable forming, answering the starting cut this season, on 19 feet cities was informed in nutre, and by no means to be viewed in the light of legitlmate racing, it would be wrone to describe it as such, though many a little brais between the old undertain and orders issued, the club flag was saluted by the fleet in the morning as it was flung to the breeze the first time from the new house at Bay Ridge, after which jibs were run up, anchors catted and the following yachts ag a course through the Astronov for well; Atelanta, 81 ft., Rens-Commedore W. R. Vermilye; Agnes, 55 ft., Commodore L. A. Fish; Trilon, 26 ft. G. A. Thayer; Mysello, 27 ft., A. Thowel; Stella, 41R, Vice-Com, H. H. Hogins; Kaiser, 46rt, W. H. Fleit; Gonia, 37 ft., T. F. Fisker, Mah, 25 ft., G. Thayer; Mysello, 27 ft., G. THE customary annual "opening cruise" of this club has be

SEAWANHAKA YACHT CLUB.

THE fleet brought together off Stapleton, S. I., for the opening of cruise, May 31st, in obedience to the Commodore's orders, mustered strong, some twelve yachts putting in an appearance. As the club observes the day strictly as a cruise, little effort was made at racing, and we are inclined to think this preferable to the rather campy glory of winning in a serul sail with an irregular start, and no definite understanding of sailing rules, as well as with a lot of "outsiders" continually taking one's wind. The fleet, which sailed around the Spit Buoy, included a fine tof, the sail of the sail of the sail of the sail of the sail one of the sail of THE fleet brought together off Stapleton, S. I., for the open

SOUTH BOSTON YACHT CLUB.-A raitling breeze from the E SOUTH BOSTON YACHT CLUB.—A FRITTING brevze from the Ex-brought out a fine list of entries for the union race sof the South Boston Yacht Club, May 20th. Open to yachts under forty feet w. l., with one-third overhang included. Four classes. Courses for the list three classes run from the judges' heat to Cow Pasfor the first three classes van from the indges beat to Cow Pasture Budy No. 6 to Bindy No. 7, off Fort Independence to Sculpin Ledge Budy, to No. 6 tower Middle and return to start. For fourth class the course was shortened to a run to Cow Pasture Budy No. 6, do down to Budy No. 7, off Fort Independence, and back to the judges' boat. The features of the tace were the line sailing of Magic and the handsome style in which the keet sloop Amile polished off everything in her class, center-hourds fueluded. Sambeam made a close race with Bonnerelt and entered a protest against the inter taking second prize on the grounds of wrong measurement. Fearless also protested Tempest for sailing wrong course. Summary as under: course. Summary as under:

NEW PUBLICATIONS.

CAMPS AND TRAMPS IN THE ADRIONDACKS-and Gray-

CAMPS AND TRAMPS IN THE ADBRONDACKS—and Gray-ling Fishing in Northern Michigan. A record of summer vacations in the wilderness. By A. Judd Northern, Synchuse: Davis, Bardeen & Co. 18-90. Price \$1.25.

The best known books relating to the Adrinondacks are Murray's famous volume and Wallace's "Guide." Each is in its way unequalled. We would not have a second one bide Murray's; we would not ask for a batter guide than Wallace's.

But here is a near little volume of '300 pages which is different from all the Adirondack books that ever came to our notice. It professes to be, and we should judge that it is, simply a faithful, unexagerated, true pleture of the camp life of six different parties of gentlemen who went into the woods and there mot with the average experiences of the intelligent, mainly sportsman. So faithful is the picture, so natural and evidently sincere every page, that we must compliment the welter on the success of his authorship. "Camps and Tramps" should be read by every one page, that we must compliment the writer on the success of his authorship. "Camps and Trangs" should be read by every one who has ever been to the Addrondacks: by every one who thinks of going there, and we may add by thousands who never have been in the North Woods and never expect to go there. It is a book which cannot fail of having a healthful effect. We commend it to our readers, many of whom may remember with pleas. ure the Adirondack sketches contributed by its author in Post to this paper.

NUTTALL BULLETIN.—The April number of the Bul-

NUTTALL BULLETIN.—The April attmber of the Bulletin, as usual, contains a great amount of valuable material, and is fully up to the customary shudded of excellence of this publication. The first article is by Mr. J. J. Dalpleish, and consists of the very considerable "List of Occurrences of North American Budshi Europe." Some interesting "Notes on the Wanter Plumage of Lencostic to taphecotis and L. tophroof is var. Bloomies, "by Dr. J. O. Merrill, follow, after which Mr. Ridgeway contributes an important paper on the "American Vultures (Surcontamphile,)" with special reference to their generic nomenclature. An extremely valuable article by Mr. Allengaves us the "Recent Additions to the Ornithological Fauna of North America," and will perhaps, interest a greater number of the readers of the Bulletin than any other contribution to the present number. Mr. Ridge way's "bescription of the Adult Plumage of Hierofalco apprideo bosletaes" is interesting as supplementing some remarks recently physicius" is interesting as supplementing some remarks rec

obsoletas" is interesting as supplementing some remarks recently published by Mr. Vennor on this variety in the columns of Forusz ANO STREAM.

To this number Dr. Coues contributes a very important article critical "Notes and Queries concerning the Nomenchature of North American Brids." The munther closes with an obitivary of the fate lamented Dr. Rewere, in whose death ornithological science has sustained so great a loss.

"Recent Internative and General Notes" occupy twenty-five pages of the Bulletin, and are as full as usual or interesting news

"Under the title "The Modorn Archer," Mr. John Wilkinson, of Chicago, publishes an attractive circular, which will be found useful to our, Western archory readers,

THE NEW YORK STATE CONVENTION.

HE Twenty-second Annual Convention of the New York State Association for the Protection of Fish and Game, which met at Seneca Falls, on Monday, May 24th, was a perfect ovation of success. The Long Island Sportsmen's Association, which was only represented by the Fountain Gun Club, of Brooklyn, last year, this year sent fifty-five delegates from the various clubs, a number which was unparalleled. They were enthusiastic and generous in every respect, and asked the Convention to come East for once and see what the Eastern sportsmen were composed of; also, they thought great benefit could be derived in having a thorough understanding in relation to game laws and fisheries by having their inland friends fully appreciate what was needed on the coast, and seeing for themselves during a brief visit to that section. The Long Island delegation went to Seneca Falls in two Wagner cars, especially chartered for the occasion, which were as well equipped as any hotel in the country, by their everlasting caterer, Mr. Harry Miller, of Flatbush avenue, Brooklyn. Nothing was wanting in the shape of edibles, even to frogs' legs, well broiled drinkables, eigars, etc. The party had a splendid run up, and were received at the depot by delegations from the Seneca Gun Club and the Phoenix Club, of Seneca Falls, with a good band of music, and escorted to their hotel. the Hoag House, whose proprietor, Milton Hoag, is one of the best shots in the State, as well as one of the most genial landlords. Upon their arrival, the delegation immediately took possession of the main parlor, and invited all in attendance to join them at their festive board in celebrating the occasion. The music in front of the house of course attracted the crowd, and every one was well provided for. The proprietor remarked that the gentlemen from Long Island were on a par with the rest of the gentlemen represented, and were entitled to every consideration. Every delegation arriving was cordially received in the same manner, and every courtesy ex-tended by both the home clubs. The Seneca and Phoenix both had their club-room doors wide open for their guests, everything was free and equal in all respects, and a finer set of gentlemen could not be selected than the numerous club delegates from all sections of the State

harmonious, and after routine business had been disposed of and motion made for locating the next meeting, it was unanimously passed by acclamation that the Long Island Association should have it. This was a new feature in the Convention, as it has for the past twenty years been hotly contested for hy ballot, and in many instances carried over until the second evening before the question could be settled. Of course our Long Island friends felt good. Why shouldn't they? Such a solid vote was never before heard during the many years of existence of the Association. After the adjournment, an elegant banquet was served, and after that the Long Island clubs did their part in the parlors of their hotel. Of the reception by the clubs neither could claim a superiority. Seneca Club did well, and the Phonix Club more than well under the circumstances under which they were situated, and we were pleased to see that no personal ri-valry existed in entertaining their guests. No matter which room was entered, the doors were open and a cordial hand ready to greet one. Of the field we must say a few words. The tents were

neatly arranged, and well provided with edibles free to all. The Spencer Club, of Lyons, had quite a large tent, well arranged with camp cots, etc. The Forester Club. of Buffalo, had their handsome striped tent well stocked, The Adirondack, Jefferson and Lewis County as usual. clubs had their usual tent well furnished with over comfort. The Dean Richmond tent was always open and free to all. The Queen City Club, of Buffalo, had a large tent, well equipped, and the old Monroe County Club, of Rochester, had their usual large tent well supplied with everything, and the usual pile of straw on one side where an overworked or tired man could take a good nar during the day. The Audubon Club, of Buffalo, extended their hospitalities as usual, and all friends were welcome. The tent of the Seneca Gun Club was an open house for all, like the rest. But the largest tent on the ground, with the highest flag-pole and largest flag, was that of the Long Island Association. This, like the rest, was never empty and never dry. Moisture was no name for it, and after they once let down the sides, everybody was welcome. The Onondaga County Club, of Syracuse, had the square, large tent that had become so well known in previous years. Besides these, there were numerous small tents for private purposes on the grounds.

Of the birds we can say, that a finer lot were seldom seen; they were all wild, in good condition, and good flyers. With the management no fault could be found, and everything passed off rapidly and pleasantly. Of the gentlemen present, it would take a whole paper to put in their names. We especially wish to remember our old friends from all sections who have been present for years and know their own names, but among the new comers we should not fail to name Mr. George A. Chappell, of Brooklyn, a veteran sportsman, and deeply identified with the fishing interests of the State; also, Henry Altenbrand, of Brooklyn, who organized a club especially to be a partner to this occasion, and when once there could not tear himself away. There are many others of the same type, but they have yet to learn what a New York State shoot is. Last, but not least, we can-not forget Mr. Chas. E. Fisk, of Brooklyn, who acted the part of a nobleman, and we were delighted to see that he was made referce in the first important contest.

During the entire week not a bet was made as to results in any contest.

Our Brooklyn friends ought to feel pretty well satisfied, as they have won some of the most valuable prizes. In the first place they won the Convention without a dissenting voice; then Mr. MacMaster's valuable picture, the Pierce Diamoud Badge, the Dean Richmond Trophy, the Wadsworth Cup—and the broom.

The Standing Committee for the ensuing year consists of Robert Robinson, Brooklyn; James F. Williams, Dansville; Jacob M. Witmer, Niagara Falls; Henry H. Morse, Rochester.

FIRE ARM FRAUDS .- By reference to our rifle columns it will be seen that the postal authorities have issued an order withholding all money orders addressed to the "Chichester Rifle Company," of Jersey City, N. J., on the ground that the company is a fraud, and the business conducted by it a swindle. We have repeatedly warned our readers against this concern, and are rejoiced to see its operations finally broken up. The "Chichester rifle" was extensively advertised all over the country as a "great bargain, equal to any rifle in the world," etc., and over the advertisement was placed a cut of a sportsman shooting deer and of a settler defending himself against This was to deceive the reader as to the nature of the arm. The rifles were advertised at the low price of \$4.50, and the advertisement was a magnificent one. The arm in reality, which the purchaser would receive, if he sent his money, was a small caliber (pocket pistol size), cheap made revolver, with a small stock added; in fact, only a toy.

This is but one, however, of many similar articles at present being pushed before the public. Large advertisements, attractively worded, are constantly appearing

guns being sold at less than cost, or than regular dealers can furnish. The advertisements describe immense productions-of wonderful demands from all parts of the country and inform the reader that for only a short time can they be obtained at the prices named.

It seems strange that an ordinary mortal can swallow so much and not "see through it." There is no reason why new firms, unheard of before, should spring up and be able to sell good articles cheaper than old established houses : and certainly he is a fool who trusts at all to these advertisements, and a still greater fool if he sends his money. We have lately seen a revolver, shown by a friend, who bought one, and we have read the advertisement accompanying it. It was represented to be equal to Smith & Wesson's beautiful high grade revolvers in workmanship and quality, and to be the handsomest revolver ever seen in America! The price was \$2.75. It was said to be worth really \$10, and a story was told of their being made for a Russian order, who failed to take them. The real truth is, they are cheap quality; poorly engraved little revolvers, costing less than \$3 to make. and of course the Russian contract story is too ridiculous. We would not put our head behind one of these dangerous little tools. Life and limb are too precious to be risked by the blowing up of \$2 worth of poor metal. The very best makes of guns do occasionally burst, but such an accident is exceedingly rare. Cheap fire arms often burst; as a rule they are liable to go to pieces.

Whom the gods would destroy they first make mad,

and the madness is sometimes exhibited by the use of cheap, poorly made firearms, which prove the agencies of self destruction.

THE TEAM OFF.

O-DAY an American team sails for the second time to meet an Irish team on Irish soil. They have gathered together in a quiet sort of a way, not altogether in the wisest manner of selection, as the present sharp discussion on that topic indicates; nor is the team, while beyond question a strong one in its individual components, the unit we should like to see, nor such a team as a sober, calm review of the field would have made up. It is too early yet to judge of Col. Bodine's capabilities as a commander, and even should defeat meet the team on the field at Raheny there is something to be said in mitigation of it. In fact, we are not altogether out of the opinion that a mild dose of defeat at this time would do American rifle shooting a vast deal of good, and we know of no team better able to swallow the bitter pill than this one There is no doubt a spirit of lethargy in rifle shooting here which a rebuff abroad may be instrumental in dispelling. The team have not had a single day's practice as a team under the eye of its captain, and once on the Irish soil and in the hands of a reception committee, virtually as extensive as the Irish census roll, the team will have hard work in

getting any practice of great value on the range there.

With a very good motive, but in a rather cumbrous manner withal, the Board of Directors thoroughly dissipated one phantasm which has been floating about for some days past.— that the team is sent out with a general shooting commission to make a descent upon Ireland in the first instance, and then complete the campaign with a sortie into England. The team has been created and is sent abroad with but a very slender backing, it is true; to do one thing and one thing only-to hold a team match The expression of this idea was with Irish riflemen. aimed at when the directors unanimously esolved "Rthat we consider it inexpedient for our representatives to enter into any team match except the one they are sent to Ireland to shoot." The match over, it is the right of the marksmen to do as they please, but not to enter into international matches as representatives of anything except themselves. Any matches of that sort which may be had, however much they may be thought to advertise this, that or another rifle, are merely "scrub matches." and any attempt to galvanize the fortuitous concourse of atoms, as the team will be when the last shot of the Irish match has been fought, into a living organic team, deserves no encouragement from this side of the ocean. It is not at all creditable to American rifle shooting, and is the one thing which will help to swell the already-rising tide of opposition to professionalism in American rifle shooting, that the Board of Directors are forced to the consideration of such a problem at all. There seems to be wanting on the part of the team, or some of them, or those into whose contact and influence they will come on the other side, that nice sense of propriety which would check them from belittling the match which led to their visit, to meet the convenience of those who have obligations on this side the water yet to meet. It should be understood at Wimbledon that until the Palma is wrested from us and added to the trophies of the exhibition tent on Wimbledon Common, no representative American team can visit that shooting ground, however many 'advertising" and so-called American teams may turn up with big pretensions.

The team for Ireland may find a difficult task before it. It has a short task to perform if it confines itself to its errand. It may be that defeat has not been without its At the meeting on Monday evening everything was of some great bargains in fire arms-of revolvers, rifles or fruit of victory on the plucky Irish marksmen. The

Rigby breech-loader is an unknown quality yet as to its merits, and we can only echo to our speeding experts a hearty bon voyage.

THE TEAM SELECTION-Col, John Bodine, who was lected as the captain of the American Team to Ireland, yesterday handed in to the office of the FOREST AND STREAM the following note :-

yesterday handed in to the office of the forest and Stream the following note:—

Editor Forest and Stream:—
It gives me pain that just at this important time, when a team is about to sail to compete in a foreign match, you have committed the indiscretion of publishing an editorial reflecting on me and my team. You had published the conditions of the competitions, and consequently knew their purport. I am not about to discuss the wisdom of the method of selection, nor the personnel of my team, except to say that I think it a strong team, and fully equal to any that may be pitted against them on the Irish ranges. And further, I challenge any man to show anything unfair in the selection, or anything like Star Chamber judgment in my action. I was fully sustained by the Committee and by the Board of Directors, and to have done differently, in any particular, would have been a violation of my instructions. If any one was agrieved, it was from his own delinquency in not complying with the plainest terms of the circular, and no one regretted this more than myself. This is the view taken in the matter by all rithmen who have become familiar with the circumstances.

It is with the greatest reluctance that I refer to this, but I cannot consent that this presentation of our action should go abroad without my earnest protest.

Col. Bodina is correct in saving that we had mublished

Col. Bodine is correct in saying that we had published the conditions, and we are correct in saying that they have not been lived up to. The one reserve which was amply sufficient for the purposes of the team was swelled to an indefinite following. Challenges about "star chamber judgment," whatever that may be, do not remove the fact that three secret meetings were deemed necessary before the present state of dissatisfaction was fully reached. Nobody has denied that the Colonel was sustained by the Board of Directors ; but that does not remove the fact that Capt. Bruce was promised Saturday as a day on which to make a score by Col. Bodine, and to his surprise and disgust found the team organized, with himself excluded. We deny the Colonel's assertion about his views being taken by all riflemen, because we know otherwise. Our own reluctance in being compelled to speak of the manner in which the team had been made up is fully as great as that of Col. Bodine in writing his note to shield the action of the managers of the

DECORATION DAY SPORTS-The growth of out-of-doors sport in the United States is never better illustrated than upon the occasion of a national holiday. Decoration Day, coming as it does at a season of the year when the heat of summer has not yet overcome the inspiriting influences of spring, has been adopted by the clubs as an anniversary day in their calendar. Yachting, rowing, athletic games, archery, cricket and rifle shooting comprised the programme of the day last Monday, and the Tuesday morning papers devoted as much space to the records of the previous day's sports, as to the distinctive forms of celebration for which this occasion has been set apart. It is fitting that the yearly commemoration of the nation's dead should thus also become a season of recreation. The arena of manly, generous competition in athletic sports has its place in the development of the nation's citizens.

COACHING .- The annual spring parade of the Coaching Club, last Saturday, was witnessed and applauded by thousands of spectators, and the young gentlemen who handled the ribbons received loud commendations for their rare presence of mind in guiding their fiery steeds through the concourse of vehicles. But how a Rocky Mountain jelu would laugh to scorn this play, and rightly so, too. If one wishes an exhibition of coaching he must go farther west than Manhattan Island to find it; and for a genuine sensation we commend a winter mountain ride through the snow.

[From a Special Correspondent.]

OUR WESTERN LETTER.

DENVER, Col., May 20th.

WHILE the vast plains, stretching from the Missouri River to the Rocky Mountains, are not without their sontiment, their monotony, their silence, their solitude and their extent, while the sky and the ground have their grand beauty, and the very sense of the desolation has its charm to the traveler, we must not overlook the useful quality in this wild region. The long, creeping lines of fire, which may please the eye with their weird dancing in the blackness of the night far over the plain, may be doing harm as well as good. There is a hay rick or two which may prove an undesigned prey to their beauty, and a ranch or so whose occupants may have to keep the fire at a safe distance. It is difficult not to have ome sort of fellow feeling for these scattered inhabit-ints of the plains. Here they are, many of them, quite way from friends, incurring solitude and separation to mass some kind of a fortune. The ranch, indeed, is not wholly unprepossessing spot to the eye. Probably no one, who has not seen the thing, could easily imag-

Perhaps the farthest thing from a ranch, and yet of the same general class with it, is a New England farmhouse, clistening white, with its bright green blinds and red chimneys, surrounded with shade trees, with a green grassy yard, and very likely a little brook trickling along by it. At a ranch there is nothing white, nothing green, nothing red; there is no yard and no rushing brook. The yard, indeed, is the great plain, though I should say, that since the introduction of barbed wire fences, one will occasionally see a fence of that sort even west of the Missouri. The ranch is low and flat, perhaps eight feet high in all, built of dirty looking logs, generally placed upright. The flat caves project, and all that can be seen of a roof is usually earth and rough sod. Rude enough, in looks, this abode is, but I should say it would be far from uncomfortable, either in summer or winter. Here a bachelor could keep his hall well enough, And two or three bachelors, who had something in common between them besides their herd, might snap their fingers for a few years at the East, especially if the herd was doing well and the dollars were steadily piling up. Here one could enjoy books, a pipe and a horseback ride, and nature perhaps. There will be no tree to sit under, nothing but the burning sun (and it gives a bronze and color which even a Harvard oarsman might envy), or the thick roof of the ranch. Then, in the spring, there comes activity, when the round-up for branding calves begins. This, too, is the season of activity for the Ishmaclite herder-the herder who is too active, and goes about branding calves that are not his. These men are to the herdsmen what a claim-jumper is in a mining camp. He may be successful, and get rich faster than his neighbors; and, on the other hand, he may be found cold on the plains, or be "run off" to some other scene of pleasure. Again, when a shipment of stock takes place, there is more rounding-up. Then a pleasing community of action is seen, as an indiscriminate herd is driven up to the railway station, and the herd-owners in that region stand by, and each checks off in his book each animal that passes into the car bearing his mark. One man may thus ship fifty head to his neighbor's five; but it evens itself off in the course of the season. These are the cattle that make the best New York beef. or near the Missouri River they are picked up by Iowa and Illinois farmers, who have come or sent West for the purpose. During the winter they are corn-fed, and fattened on the farms of those States, and then are sold to the stock-yard men of Chicago at a handsome profit. So we get in Washington Market the large, fat quarters of Western corn-fed beef. The future promises even better, at least larger beef than we have had hitherto. Considerable short-horn blood is being put into the herds on the plains, and while it may hardly be expected that such heavy-chested cattle will result from this innovation as are raised by extreme culture in England, yet in general and gradually the size and form of the animal should become better. All through Nebraska there is grazing ground. Of course, it is better in some parts of that region than in others, and one should not settle down at any point for herding, without some previous inquiry. Another caution is, that a man who is not used to cattle or herding, as the business is done on the plains. had better serve an employer for a while to get experience, before embarking in the business on his own account; and even then he will have to be patient for a couple of years, before the profits fairly begin.

SPRING IN ALASKA.

SITKA, April 9th.

SITKA, April 9th.

F a dozen of us, who differ and argue upon most any thing that will formula a second sec thing that will furnish a possible difference of opinion, no two are agreed as to whether the steamer is due now or will be soon. Her schedule time calls for her to arrive on the 7th of each month, or 8th at farthest, that though she has seldom done so we all avoid cham pioning that date, but four distinct sets of us are equally positive that she is due this time on the 10th, the 12th, the 14th and the 15th, and we all base our positiveness upon the same foundation-namely, the assurance of her Captain upon his last visit. The matter is of little importance, except that it enables me to be consistent, and start this letter, as I find by glancing over my files I have about all my letters, with a few remarks about said steamer, and seeing the letters side by side in a scrap book, I find I have been guilty of tautology, for very nearly the same remark opens several of them; but on my word it was accidental, and having been discovered will be in future eliminated; but the fact is, her arrival is our only event, and we can't avoid thinking and writing of her. I'll try to stop, though! I've broken myself of worse babits; for instance, my earlier letters. I gave them the true Alaska stamp by bringing in more or less "hoo-che-noo," a word introduced to the Eastern World as a typical Alaskan phrase. I even adopted the missionary paper style of speaking of it, and always preceded it with the adjective "vile." How certain adjectives become parts of the simple nouns they qualify and transform them into compounds! Who, in hearing a snake decribed, or by a lady a rat, has failed to expect and hear the ue just how a ranch looks. The word has a kind of lux-1" big?" And who, throwing a fly for a brook trout and

raising a chub, or fishing for codfish and hooking a pollock or dogfish, has failed to attach a prefix to their ejaculation when they named it? So it is with "vile" hon-cho-non

I think the word must have originated in "Greenland's icy mountains," etc., where, however, "only man merits the epithet, and as I like to be original occasionally, I've dropped it, and I'll drop the steamer.

March has been with us probably the pleasantest one.

so far as weather goes, that we have ever experienced out of the tropics, and April so far is following its example.

Although it is popularly supposed that it rains here

about all the time, we have in the last forty days had but four or five rainy ones, and we have absolutely longed for it, to wash off the snow, which an unusually severe winter has piled up in an unprecedented accumulation. The miners who are waiting its departure to develop their last year's finds; the prospectors who are anxious to be off among the mountains, and whose stakes, with which, economically used, they hoped to tide over the winter in Sitka, have become impoverished through the carnest efforts in their behalf, made by the purveyors of amusements in the shape of dance halls, grog shops, etc., grumble at the snow, and the slight impression made upon it by our not over warm sunshine, and we are all tired of it. The robins and sparrows and buntings have returned, expecting, evidently, to, as usual at this season, go at once to housekeeping, but they flit around on the leafless trees disconsolate; and the eagles sit for hours motionless, evidently discouraged.

The herring have come in as usual, and are being caught in great numbers by the Indians, who strike into schools with poles armed with sharp nails.

The ducks have nearly all left us; a few old wives still remain faithful and firm, somewhere—we can't find any.
The Indians bring in a few mallard. The venison is uneatable, and the trout have not yet put in an appearance. On the whole, this transitory stage is decidedly uncomfortable.

I hear that down about the mouth of the Columbia River the hair sealing season has begun, rather earlier than usual, and that several hundred seal have been captured.

Right here let me again use your columns to urge people to save their and my postal stamps by not writing to me to get their seal skins. They don't come from this neighborhood. I've been here a year and haven't seen a seal. If I had I would have gone hunting for it daily till I got it, for there's nothing else to go for, except perhaps bears, and I'd rather buy them.

To my regret, and that of the Siwashes, many of whom got rich out of it last summer, the salmon cannery will not be operated this year; the reason why I cannot tell, but I presume the company know their own business best. I know, on one side, that the fish can be gotten here at a far less cost than further south, but, on the other hand, the season begins down about the Columbia River six or seven weeks earlier, and the rise in tin from \$5 to \$12 per M. makes an item.

Fred Mather writes to ask me to tell you something about the Thaleichys pacificus, or euchalon, or as call it in Alaska, the candle fish, or as called by the Siwashes, the "oulachan." I can't tell you much now, for they don't come here, but are plentiful in Wrangel, and I'll send down a jar with alcohol for specimens, and get up a lot of data by next steamer. In the meantime, Au revoir. PISECO.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

A STRING OF FIELD SCORES.

A STRING OF FIELD SCORES.

MONTGOMERY, ALA., May 25th.

NOTICED in last week's issue of your paper that some at one shot a very great feat. In fact, it is, but what do you think of this? Several years ago, when I was quite a boy, I made, I think, the best score on record. At Abercrombie's plantation, five miles below Columbus, Ga., on the Alabama side of the Chattahoochee River. I killed and bagged eighteen sinpe in thirteen consecutive shots. I shot three at one shot, and two three times; the remainder were single shots. I did not take them as they went. When I killed the three at one shot they were mainder were single shots. I did not take them as they went. When I killed the three at one shot they were the fight of the shot has a strength of the shot shot and gathered. The double shots were made as they got up before me in range, irrespective of distance from each other, and I repeat that only once were there as many as three together, and I killed them. I do not think this score has ever been beaten, and should any of your readers think I am simply telling a "sinje" story, I would most respectfully say that I have a credible witness, who saw every shot.

It may not be amiss to say that I am now shooting a little 12 bore gun, and to tell of some of the shots that I have made with it only for the purpose of showing what a gun can do when properly loaded and handled. The gun is a full choke, 14 at the muzzlo. Here is what I have done with it, viz.; In the presence of the New Or-

leans and Montgomery Shooting Clubs, at New Orleans, two years ago, I killed a pigeon flying nearly over the eighty yards boundary, I standing behind the twenty-six yards score and fully ten feet back of that at the table where our ammunition was placed. The bird was fully thirty yards high. The load in my gun was 3drs. Curtis & Harrey powder and loz. No. 6 English chilled shot. I have killed a goose with the same load, exactly 60 yards. I have killed a gobbler weighing eighteen and three-fourths pounds the same distance, except I used No. 4 shot.

Thave killed a goobeler weighing eighteen and three-fourths pounds the same distance, except I used No. 4 shot.

I have killed a goose at one hundred yards (and perhaps further) with 3drs, powder and 1oz. FF shot (thirty-five pellets to the ounce by actual count). On my last snipe hunt I killed a snipe severity yards high that fell gerpendicularly one hundred yards from me by actual count. On my last snipe hunt I killed a snipe severity yards high that fell gerpendicularly one hundred yards from me by actual measurement on the ground. My companion first shot at it, and I missed with the first barrel and killed with the second, and strange to say, he was struck with five or six shot. I used on this occasion 3drs, powder and 1oz. No. S chilled shot.

At a thirty-inch circle, forty-five yards, this same gun has put 270 out of 276 pellets (1oz. No. 6 chilled shot) in the circle. With 22drs, powder and 2oz. No. S chilled shot I have shot doves on a rise of fifty to sixty yards, one with each barrel. Is there any other on earth to beat it?

Well, here comes the most remarkable shot of all, and I have two witnesses to it—my companions who were in the boat with me. During the last freshet in the Alabama River, when the land opposite the ciry was under water, we started out after some ducks. We were seventy-five to one hundred yards outside of the trees that describe the left bank of the Alabama. A flock of ducks flying very high above the trees came flying down and I fired at them with 3drs, powder and 1oz. Ff shot (thirty-five to the ounce), and drove a shot through the wing and into the body of one of them, killing him almost instantly. The gentlemen who werewith me—both the spin flow of the spin of this duck. No one ever dreamed that a 12 bore gun, or any other, would hold up at that distance, but this is an indisjutable fact.

I give you also herewith a score at pigeons with same gun—3drs, powder and 1oz. No. 7 shot—killed and bagged forty-seven ducks and one goose, without missing a single shot—single of his duck.

even if made by any one else.

I challenge the world to produce anything, all things considered, more remarkable.

AD VANCE.

considered, more remarkable.

AD VANCE.

CLEVELAND.—"Two snipe at one shot." That's nothing. I once killed seven Wilson snipe at one shot, and this is how it happened: Some years ago this bird nested in numbers in this locality. When the broods were able to care for themselves they resorted, in August, to the marshy borders of the Cuyahoga in the evening for food. Near the mouth of this river was located a distillery, where thousands of hogs were fed on the refuse of the still, and the refuse of the hog pens was emptied daily into the river; consequently, every bayou in the vicinity had the material to develop aquatic inset life in great abundance. There ducks and beach birds of all kinds in their season resorted by the thousand. In the evening the snipe would come to these insect-infested pools in great numbers, and it was on one of these occasions that I got a lot of them in a row and killed seven at a single shot. Twice I have killed two snipe at a shot, but in each case one bird only was in the air, while the other was quietly feeding or squatting in the tussock beyond, unknown to me when I pulled on the flying bird.

I once drove a pack of quall into a small ravine, and as I approached the margin up got a wild turkey, not fifty feet off. A firm No. 6 shot through the head and neck brought down the bird, which weighed twenty-four pounds when cleaned. But this is not the end of the story. The same shot startled a bery of quali, and strange as it may seem to you, they left behind them two of their number, killed by the same shot that captured the turkey. A friend—now one of the representative geologists of the country—used to pass many vacation days in squirred hunting, and on one occasion he took one through the head in the usual way at short range; but was he not surprised when another squirred fell from a tree beyond, shot through the body by the same ball. I note took a greenborn in the deer hunting filel from the wools of Michigan some years ago. He had never seen the animal before, except in the domesti

THE AUXILIARY RIFLE BARREL .- Editor Forest and

from the attempt by the fear that the indefinable hang of their favorite breech-loader might be thereby impaired.

between the between the second that must be the second many paired.

My experience on this point is quite the reverse, and in its place. Being only twenty inches in length, and heavier at the breech, its effect is to make the muzzle more easily manageable.

One point wherein lies its immense superiority over any fixed contrivance, is the readiness with which it may be withdrawn, leaving the shot gun always in statu quo. So far as the side balance of the gun is concerned, a man who shoots from the right shoulder should use the "auxiliary" in the left barrel, and will find no inconvenience whatever from unequal distribution of weight. But nothing can convince one skeptical on these and similar points like the possession and use of the rifle itself, which, although somewhat diminutive in size, and by no means obtrusively gussy, is more thoroughly com-

titser, which, attough somewat unimiter is nize, and by no means obtrusively gassy, is more thoroughly competent to plead its own cause, by meritorious action, than the most determined verbal advocate.

Perhaps I ought to say here that I have no interest whatever in the sale of these rilles, but who, with a spark of philanthrophy, when he gets a good thing, will keep it to himself.

HUBERT REYNOLDS.

Camillus, N. Y., May 10th.

PENNSYLVANIA—Greenville, May 28th.—A great many snipe have been killed around about here. Think that woodcock and pheasant shooting will be good.

B.

woodcock and pheasant shooting will be good. B. Short Guns and Whall—The 1st of May Mr. W. R. Schaffer with a party of gunners went to their grounds on Small Point, Maine, on a coot-shooting trip, and had very good success, killing quite a number. Early one morning we discovered out in the sea what was supposed to be a slipiwreck. After considerable discussion, two of the party catered to go out to it, and found it to be a whale which had been killed outside by a harpoon and had floated there and died. After fastening lines to it, the party finally brought him to the shore. On measuring him, they found him to be 66 feet long; diameter, 12 feet 9 inches; width of flukes, 13 feet. He was full of oil. The whale was turned over to the boatmen to secure the oil. This, we thought, was, a capital shot-gun expedition.

tirst.prize was awarded to Mr. Warner.
Ties of 14, 29 yards: Theoken missed his first, Tallman his second,
Lefever and Miller their third, Nearpars his fifth, and Smith,
Hudson and Sheridan tied on five each. At 31 yards: Sheridan
killed four, and Smith, of the Onondaga Club, and Hudson, of
the Audubon, Buffato, five each, and divided. Tres of 13: There
were twenty contestants. It ended in a contest between Henry
Jones, C. D. Rodman and Robert Kewell, in which the latter, a
member of the Forester Gun Club, Buffato, won the third prize.
The ties on 12 was won by H. B. Hooker, of the Monree County
Sportsmen's Club, of Rochester, who took the fourth prize.

| The Fly Casting.—The only e | atries were Chief Engineer Ira |

Wood, Cornelius W. Smith and H. E. Robbins, all of Syracuse Wood, Cornelius W. Smith and H. E. Robbins, all of Syracuse—the latter of the Standard staff—and W. C. Jakus, of Buffalo. All of the Syracuse contestants are pupils of the veteran Rube, Wood, hence he did not bring out his own rod. He did not have the heart to rect out his line o'er the heads of "my boys," as the champion delights to call his graduates. Mr. Wood, together with H. R. Wood, were chosen judges of the ly casting, and Dr. Fowler, of Ithaca, referee. The following was the record of the casting in number of feet of line thrown out :-

| Name. | | | | et. |
|---|-----|----|---|-----|
| Ira Wood, of Syraeuse | . , | | | 70 |
| C. W. Smith, of Syracuse | | | | 70 |
| H. E. Robbins, of Syracuse | | | | |
| W. C. Jacus, of Buffaio | | | | |
| The judges decided to award Mr. Wood the first prize on ac- | C١ | υì | u | пt |

of his superior style and accuracy. The exhibition was, considering the poor weather, very praiseworthy. The other prizes were awarded in the order named.

RIFLE SHOOTING-The distance was 100 yards, off-hand, string measure, the telescope being barred. The judge was Mr. James Rafferty, and the referee, Mr. E. Hill. Mr. Archie Paul, of Cohoes, scored 27 7-16, getting first prize; Mr. O. G. Jones, of Syrneuse, 35 5-16, second prize; Mr. Samuel Jacoby, Senees Falls, 40 7-18, third prize.

third prize. PHACTICE.—During the fifth contest the match for pisted shots was called at the rito range. Ten shots were allowed, string measure, at a distance of fiftcen yards. Mr. J. H. Andrews scored 16 3-16 and took first prize; George J. Marsh, of the Forester Club, Buffalo, 251 and second prize; O. S. Jones, of Syracuse, 251 and third prize. The other scores were by Mr. G. W. Crouch, of Rochester, 29, and Mr. H. B. Hooker, also of Rochester, 271. Massacausextrs—Quinch, May 20th.—The Merry Mount Shooting Club glass-ball shoot:—

KANSAS,-The third annual tournament of the Kansas State portsmen's Association will be held at Lawrence, Kans., June 8th, 9th, 10th and 11th; \$3,000 will be offered in prizes.

—We have received the Constitution and By-Laws of the How-ell Gun Club, of Howell, Mich. This club has an excellent record at the trap. The rules are, we presume, the result of its own ex-perience, and if they have stood the test of the club's practice they ought to be practicable and sufficient.

The Rifle.

RANGE AND GALLERY.

MASSACHUSSTTS—Boston, June 1st.—The spring meeting of the Massachusetts Rifle Association, which commenced at Walnut Hill May 27th, closed Saturday evening, May 29th, and was the most successful of any meeting ever held on these grounds. There was a good attendance throughout. The weather conditions were excellent, and some magnificent scores were recorded. Among the visiting riflemen were representatives from Springfield, Walpole, Worcester, Medford, Providence, Hartford, New York, Gardner, New Bedford and other places. The prize winners dusting the meaning were a follow:

10th, glatuler, we because and other places. The plaze winters during the meeting were as follows:—
For the Herald Cup, distance 200 yards; position standing rounds; three best scores to count as one. Total entries 386 G.F. Ellsworth, 104; W. H. Jackson, 102; N. W. Arnold, 102; W. G. F. Creedmoor, May 26th.—The American Team did not practice to-day, Jackson being in a burry to get back to Boston for the Wainut Hill meeting. The event of the day was the "of-hand" team match. It was for teams of four men; any rifles; 100, 200 and 300 yards; five shots per man at each; position, etanding at all. Four teams entered, and the result was as follows:—

NEW YORK RIFLE CLUB, TEAM NO. 2. E. B. Barker.... EMPIRE RIFLE CLUB.

24 21

23 22

23 22

25 17 J. W. Todd.... F. H. Holton.... C. J. Falco... J. H. Brown.... 22 24 23 21 20 19 16 18 67 67 61 58 BROOKLYN RIFLE TEAM, R. Simpson... G. W. Weltz.... J. B. Hazleton. D. Gruetter...

A match at a rarely tried distance was opened also by the Ama-teur Rifle Club. It was a 15-shot competition at 700 yards, and was won by Mr. Waters with a score of 72 out of the possible 73 points. The target used was of the second-class size, commonly used at 500 and 600 yards. In this match, which promises to grow

used at 500 and 600 yards. In this match, which promises to grow in interest, Mr. L. Goiger made 67; Mr. R. H. Keene, 66; Dr. S. T. G. Dudley, 65, and N. D. Ward, 64.

The Empire Club commpetition for the "Daly Trophy" was also shot. It was of 10 shots each, at 300 and 500 yards, the standing position only being allowed at both distances, with a second-class target at 500 yards and a third at 300. Mr. F. H. Holton made the best score, 81 out of the possible 100, and became that winner of the trophy, he having carried it off on two previous occasions.

Orecdmoor, May 29th.—The matches to-day were dull, with few entries. The Oxford match at 200 yards, 10 shots, was won by Mr. J. R. Orohman, who scored 42 out of the possible 50 points, the best of his compotitors making the following totals: G. Joiner, 41; T. J. Dolan, 40. F. G. Williamson, 37; J. L. Paulding, 37, and J. M. Robertson, 36. The We Will match at 300 and 600 yards was won by Mr. J. L. Price, with a total of 43 points.

HELVETIA RIFLE CLUB .- A practice shooting of the Helvetia Rifle Club took place at Hartung's Park, Mott Haven, last Tucaday. The day was bright, but a very heavy wind provailed, which annoyed the riflemen present to some degree. The following are the scores at the ring target on 200 yards range :-

| $Rings_*$ | | Rings. |
|--|-----------------|-----------|
| A. Weidemann 202 Ph. Klein | | 147 |

| A. Weidmann | 21 | 84 |

Shooting was done with breech-loaders, mostly of Swiss manufacture. SCHUETZEN NOTES .- Monday, the 7th inst,, begins the twenty-

Soldbrikes Norks—Joinday, tue vith usis, begins too twenty-third annual shooting festival of the New York Schuelzen Corps, Major George Aery commanding, and will last three days. This corps is well and favorably known to almost all the German shooting organizations of the United States, and its Captam, officers and members understand very well how to organize their officers and members understand very well how to organize their festivals so that they always are the attaction of the pleasure-seeking people and the rendezvous of hundrods of sharpshooters. Union Hill behaviteen Park, where the festival takes place, will certainly be visited by thousands of people during those days, and we are convinced that not many will wend their way homeward unsatisfied. A grand procession in carriages will inaugarate the festival on Monday. This procession forms at headquarters, 24 Markets street, at 0 clock A.M. Monday, and will start at 10 clock sharp. Foremost will be a platon of mounted police, which will be followed by Separate Troop A, Cayadry, N. G. S. N. Y., Major Karl Klein commanding festive wagon with Wannemacher's Seventy-first Rejimental Band; carriage drawn by four hores, occupied by Major George Acry, ex-Captains John F. Rothmann and David G, Yuengling, Jr. Following them are the invited guests and sharpshooters from Philadelphia, Baltimore, Hartford and other cities; and last, but not least, officers and invited guests and snarpsnooters from Finiandenmi, Bautmone, Hartford and other cities; and last, but not least, officers and members of the corps, all in carriages. After passing a few principal streets on the East side they will turn down Fourteenth street, cross the ferry at Christopher street and proceed to the purk, where a fine luncheon will be in waiting for the hungry and thirsty. At 10 clock the shooting at the different targets arranged by the United Schuetzen Association will begin, the programme

of the United Schiefzer Association will begin, the programme of which is the following:—

1. Prize or Ring Target, divided in 25 equal rings; 25 prizes; first to be \$50 and last \$4; number of tickets unlimited; price of ticket

to be \$50 and last \$1; number of ftekets unlimited; price of ticket entitling to three shots, \$2 each.

2. Man Target, divided in 20 perpendicular lines; 20 prizes; first to be \$20 and last \$2; number of tickets unlimited; price of ticket entitling to three shots, \$1 each.

3. Bullseye Targets—The round black or false center is 12, the bullseye four inches in diameter; 33 prizes; first \$25 and last \$2; number of tickets unlimited; 10 shots for \$1; additional to that there are eight premiums for most bullseyes; first \$21 and last \$2. The above targets are open to all comers and to any rifle; distance 200 yards. The members of the corps will also shoot at a big eagle, which will be fastened on a high pole; twenty prizes will be competed for; each part of the eagle must be shot down in

eagle, which will be fastened on a high pole; twenty prizes will be competed for; each part of the eagle must be shot down in rotation; the man who brings down the last piece (that is the body) will be declared king and crowned. The coronation takes place in the afternoon of the third day, the 9th inst. Preceding this act the ladies will have a prize shooting of their owa, and will be rewarded also with prizes; therefore in the most instances husband and wife will go home happy.

We wish the corps all the success they deserve.

WEST VIRGINIA-Wheeling, May 26th .- The second match of the series of contests between the Canton Rod and Gun Club, of the series of contests between the Canton and the Chin, at Collingsville, Coun., and the Wheeling Ritle Club, at 200 yards, off-hand, Massachusetts target, came off to-day. Both clubs improved on their first score, and especially the Wheeling team, who rolled up the magnificent total of 503 points. The scores were as follows :-

WHEBLING RIFLE CLUB TEAM,

O. B. Hull H. B. Moore. J. H. Bidwell Dr. George F J. Laubensti

Total.

On the 57th inst, the long-range team went to Washington, Pa, to shoota return match with the club of that place. The first match was shot between teams of three men each, on the 8th inst, by telegraph, and resulted in a victory for the Wheeling club by 22 points. The Washington rithouen not feoling satisfied over the result, the Wheeling club decided to go to their range and awa unother round. The team was received by Mr., James Woods, and conveyed to the range, and the match commenced motol. woods, and conveyed to the range, and use marge commented about 11 ciclock. A young hurricane came along about an inour later, which made overyone on the range seek the shelter of neighboring covered bridge. After the storm had passed the teams resumed firing at their seventh round, and continued until about 6 ciclock, when on ounting totals the Wheeling team was about 4 o'clock, when on counting totals the Wheeling team was found to be II points to the front—not so many as in the first match by another cleven, but considering that a very new man was being substituted for Mr. Stewart, who shot before, it was satisfactory. Mr. Dwight did not make another clean score, but came within two points of it; while Mr. Baboock passed his first score by one point. The Wheeling team and those who accompanied them had a pleasant trip, and were "glad they went."

The following are the complete scores:—

WHEELING RIFLE CLUB TEAM.

LOUISIANA—New Orleans, May 23d.—The twelfth individual con-test for the Washington Artillery cup came off to-day, at the New Orleans Rifle Park, in the presence of a large number of lovers of the sport. The weather was fair and the wind light enough to admit of good scores. A number of riflemen were present at the range, but only eight contested for the cup. The following is the

| BCOTE .— | 200 Fards. | F(10) 3 P 2 . | Total. |

Mr. Selph won the contest, and, this being the fifth time he has won it, the cup becomes his property, and will hereafter be added to the many trophies already in his possession.

THE STATUS OF "PROFESSIONALS."-40 Chestnut street, Boston May 30th.—To the President and Directors of the N. R. A.—Gentle-men:—The resolution offered by Col. Sanford, reflecting upon men:—artist of gentlemen who shoot the rifle, who may be re-lied integrated to the rifle who may be re-ciprong or have received favors from rifl edislers, or rifle manu-facturers, or dealing in or have dealt in rifles, comes at rather at unfortunate time. The lash intended for the backs of some of your own team is so long that I am afraid it will cut the team We are invited to meet an Irish team, armed with the new Rigby breech-loader, and Mr. Rigby is one of that team the new Rigby breech-loador, and Mr. Rigby is one of that team, and probably others interested in the new arm. Do you wish to be impolite to those gentlemen in showing your dislike to members of the American team? Will not so broad a resolution be either inoperative, or prevent so many from participating in rife matches at Creedmoor that you had better not have the matches free that you had better not have the matches free the matches at Creedmoor that you had become not forward that the statement of the property of the front with no favors.

row many of your board can see to the front with no rayor, received from the rifle interest? I know that not one of the team of 1877 but what received favors. And all of the teams before and since have received the same probably. Exchanging old rifles not worth a cent for a new one worth Slouis a very great favor. I have not found, in my life's experience, gentlemen above re

Therefore the theorem is a superior september above re-ceiving favors, when it does not come in the shape of a bribe. The whole cry against the professional comes from those who are jealous of the success of our crack shots. No one would care were those-called professionals poor shots, and easily beaten My advice to the Board is to drop the whole matter; and to

My davice to the loant is to drop the whole matter; and it those that ray because they cannot win anything, I would say Do you deserve what you have not earned? Are you willing it stop smoking, drinking and late hours? Do you love rille shoot-ing enough to make the sacrifice necessary to become a first-class shor? If you are not willing to do so, keep still and do not throw mud at those who are. Respectfully. W. H. JACKSON

How a "RIFLE" COMPANY DID BUSINESS.—The Chichester Rifle Club has its headquarters on the second floor of the Sterling Riffe Club has its headquarters on the second floor of the Sterling building, No. 31 Montgomery street, Jersey City. The company was organized last December with an alleged capital of \$10,000 Warren N, Fischett, J. P. Cottle, of Jersey City, and Charles Mon soil, of Brooklyn, comprise the company, Fichett owning half the stock, and the other half being divided between Cottle and Mon-sell. They have been sending out, principally to country dis-tifies towards a sending out, principally to country disthey transplant of creating out, principally to country districts, tempting circulars having a cut of a beautifully mounted rifle, which was offered for sale at from \$5 to \$15, according to quality. The company did no business in Jersey City or vicinity

devoting their exclusive attention to country trade, and receivdevoing interestination of country trade, and receiv-ing their orders by mail in the shape of registered letters and money orders. Some time ago Postmaster Gopsill, of Jersey City-began to receive complaints against the rifle; company. Corres-pondents informed him that instead of receiving the handsome rifle described and illustrated in the circular, they received a pistol with a shoulder-stock comparatively valueless, and of no pason with a shounder-store comparatively varietiess, and of a use whatever for the purpose of a rifle. The complaints finally became so numerous that Postmaster Gopsill communicated with the authorities at Washington, and an investigation was ordered an order from the Postmaster-General to Post master Gopsill to withhold all registered letters and money orders addressed to the Chichester Rifle Company. The office was closed yesterday.—N. Y. Times, May 25th. The company's

-Owing to the absence of several gentlemen, who were to take part in the match between Boston and New York, and want of support from the majority of the New York archers, the match will have to be postponed for the present. W. HOLBERTON,

will have to be postponed for the present. W. HOLBERTON. ORITANI ARCHERS-Halechesack, N. J., May 37th.—Notwith-standing the intense heat yesterday, quite a number of the members of the Oritani archers took part in the first monthly contest for the two badges. Mr. W. Holberton won the gentleman's badge on a score of only 283, American Round. Mr. C. de R. Moore would have won it easily had be been able to have fulshed his score, as he had 256 at the forty and fifty yards runges. Mrs. Holberton won the halles' badge sixth a score, or 151 at the would have won it easily had no occa able to have minished his score, as he had 256 at the forty and fifty yards ranges. Mrs. Holberton won the ladies' badge with a score of 151, at the Columbia Round. The frightful heat told on the scores and cut them down; but those who attended deserve great credit

NEW YORK ARCHERY CLUB.-The Park Commissioners having notified the club that practice would necessarily have to be dis-continued upon the archery lawn in the Central Park until after it rained, the club was unable to hold their annual field meeting Decoration Duy, as intended. A number of its members took advantage of this notice, and visited the Brooklyn Archery Club Monday, May 31st, and had a very enjoyable visit. At the meeting held Wednesday, May 28th, six new members were received. The club expects to resume practice again this week.

THOSE CHALLENGES ONCE MORE .- New York, May 28th .- Editor Forest and Stream:—Archery being really a royal game, it seems a pity that envy and jealous feeling should in any manner actuate those who practice it. It should escape the bickering and controversy that fall to the lot of most other sports, and which do them no good. It is with this spirit I once more take your space to answer the communications in your last issue, called

space to answer the communications in your has issue, called forth by my letter the week previous.

In answer to Mr. Holberton's courteous letter, I am sorry the necessity are so a glate the question in print, still the fact is uncontroverted that the Now York Archery Club did accept the challenge of the Challenge of the Unitani Archers with the provise I stated. Regarding the letter from the person who imagines he hides his identity under the name of "Oritani," it could only have been written through envy, ignorance or design, containing, as it does false statements from beginning to end. The author may yet find that the New York Club, being organized for the plea and that the New York Club, being organized for the pleasure and physical advancement of its members, who are bent in doing everything la their power to make it a success; to advance the interest of archery, and foster the kindest feelings of good fellowship among neighboring clubs, does pride itself upon its "high moral principles," and that such slurs only react upon their author. The New York Club has never presumed nor at tempted " to constitute themselves censors over the membership of other clubs," but they do claim the right of reg on other chas, but they do claim the right of regulating their own membership in whichever manner they may deem hest for their interest, and shall exercise it every time, whether it pleases outsiders or not. The overwhelming challenge which closes the communication, unfortunately for the writer, cannot be noticed even if he does "regard it as official," for he may yet live long enough to learn that "official" communications are never anony-

In conclusion I want to say, once for all, that our organization the concassion want to say, once for int, that our organization being for the object above stated, we do not propose to enter into nowspaper controversies, and that hereafter all communications of the tenor of the one now noticed, will remain unanswered, whatever their origin may be. Jas. W. AUTEN, JR., Secretary, New York Archery Club.

New York, June 1st.—Editor Forest and Stream:—Whatever at-tempts are said to have been made by the New York Archery Club to secure the membership of certain Oritani and Manhattan Archers, spoken of by "Oritani" in your last issue, were by indi-viduals, unofficially, and in accordance with the conditions of our ridinals, unofficially, and in accordance with the conditions of our constitution, allowing only the admission of archers connected with no other club.

8. S. Roper, N. Y. Archer.

The Forest AND Stream hopes soon to be able to chronicle a cettlement of these differences in the shape of a score which shall determine the relative merits of the two clubs as marksmen Let us have a friendly recourse to arms.

THE BROWNELL METHOD OF SCORING.—The plan devised by

93 [cla] AP, 46 a : 5 194 SHI co to. 14 39 1-5 * 0 7 -55 98 9 53 -Ŀ ı, 23 30 52 35 56 19 65 30 77 6 7. 9 2 9 20 NAMES ri ď ä ₹ ď.

Mr. A. S. Brownell for scoring in archery has been accepted by the Boston archers as an improvement over the old styles formerly in vogue. The chief advantage claimed is that the score is complete with each end, and the time and labor devoted to reckoning up are therefore unnecessary. The method is described as follows:-

"A space is given for each end, in the upper part of which the value of each hit or miss is re-corded. To illustrate: The first end of arrows hit black, white and end of arrows hit black, white and blue, recorded 3-1-5, and the total value, 9, is placed in the lower part of the space. The second end of the arrows hit a black, blue and a miss, recorded 3-5-0. The value of this end, 8, is added to the value of the pre-vious end, 9, and the amount, 17, placed in the lower part of the space for the second end, show-ing the total value of the two ends. In this way each end is recorded, and its value added to the total of the previous ends, giving the total value of hits after each end, and the value of the last end added to the previous total gives the complete score. Columns for the complete score. Columns for colors are given, in which the de-tails of hits and colors can be kept, and by figuring these in the

THE CANADIAN CRICKETERS -On May 14th, the team of Cana. dian cricketers arrived in Glasgow, Scotland. They had a capital and cricketers arrived in Glasgow, Scotland. They had a capital state of the condition. As we propose to publish their principal scores in full, we only mention, at this time, what cable grams to the dally press have already announced, that what coolingtons to the language press have a treaty amounted, that they came off winners in their first match, against the West of Scotland Club, and were defeated in the second, by the Edinburgh High School, by ten wickets.

-"The Cricket Tour of the Gentlemen of Ireland in the United States," is the title of a witty little volume written by "one of them," showing how they taught the Americans how to play cricket-(in Philadelphia?).

—The St. George's Cricket Club are talking of moving from Ho-boken to the upper part of Manhattan Island.

boken to the upper part of Manhattan Island.

AUSTRALIANS W. RIGHTERS OF SP. LUKE'S CRIGKET CLUB.—
Played at Southampton, England, May 13th and 14th. Won by
Australians by one innings and 22 runs. The old saying, that
"many hands make light work," certainly cannot be said to have
applied to the inaugural match of the Colonists now in England;
for as we have shown above, they won in a canter against a good
eighteen, including the two cracks, G. F. Grace and W. R. Gilbert
As far as the all-round strength of the team goes, Bell's Life

South State S speaks as follows

"Now that we have had an opportunity of Judging in positive "Now mat we make mad an opportunity of judging in positive match play, we can unlessitatingly say that they are one of the best teams that we have ever seen banded together. The batting ability is patent, every man 'can bowl,' and to our country cousins we say, so and see the 'Kangaroos' field; their ability

cousins we say, go and see the "Annigaroos" held; their ability in this, the very backbone, heart, and everything that makes up true cricket, is so unquestionable that a fairly good batting lot found themselves doubly bandicapped."

From the annexed score it will be seen that A. Bannerman, "the pocket Hercules," did not come off, but Murdock had a day worthy to be marked with a white stone in his carer. Boyle played the soundest kind of cricket, and Bonner, the man of feet and inches, knocked the bloom of the eather whonever he got a chance for "lamming." Spofforth, "the demon," breathed de-struction as of old, and Boyle cooked no less than a baker's dozen

of wickets. Blackham was as good as ever behind the sticks, and of weekets. Indexing was as good as virtue for a cover-point, Jarvis proved hinself to be an exceptionally fine cover-point, Allogelher, they are said by a correspondent to be a "very likely looking lot," and whatever comparison may hereafter be instituted between Gregory's team of 1878, and the present, Boyle's men will surely reader a good account of themselves.

AUSTRALIANS

TRENTON W. STATEN ISLAND ISLAND ISLAND IN MAY 20th, and won by the former on first innings score by 67 runs. By boat, rail and 'bus the aspiring second eleven of the Island Club, with Sprague, swooped down into the heart of New Jersey on Saturday and assisted the Tenton Club in inaugurating their new ground. The inclosure of six acres, by the way, promises well for the future, and besides a good wicket it contains a new scalar polar property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the private the privates found in well for the trutter, and tessions a good water is, editables a new and well-arranged club-house. On arrivint the visitors found a folly lot of oil Staffordshire cricketers, including one Mart, who for three years past was engaged as ground man at Tambam Paik. the dutie of Stutherland's estate, and it was not long after he course menced operations with the ball that Capt, Inman wished that he mences operations with the boar that Capt. Human wassed task the had taken his drove to any other place. As a bowler the ex-pro-reminded one of a cross between Hallis and Jack O'Brien, of Boston. The day was cool, but Mart's annalysis "against such good bats" was a hot one, ten wickets for 27 runs.

Despite the drubbing the youngstees got, from the fact that they were overweighted in more ways than one before a ball was

they were overweighted in more ways than one before a ball was bowled, the visitors enjoyed themselves bugely - and an excellent old-fashioned cricket dinner at the Treaton House did much toward deadening the sting of defeat. Mountford showed excellent form, but his thirty-six was not without a side of luck. Filmer loag-stopped in fine style, and Satterthwaite bowled eighty-seven balls for 16 runs and seven wickets. CHESTEUT HULLER. ST. GEORGES.—Played at Hoboken, N. J.,
May 25th. Former won by 12 runs. On Saturday the gentlemen
of the Chestmut Hill Club turned up on the St. Georges' grounds
with an excellent cloven, including the old stand-by, "Netly"
Pearson, and Tyres, their new professional. The home club had
foregs.

banded together an eleven composed of members from the Manhattan, Staten Island, Columbia College and itself, which dove-tailed together so nicely that it almost escaped defeat. The wicket was a good one, simply because Glies had looked after it, and not because old Sol had not. The play began at 11.30 A.M., and five good bowlers propelled the ball until the Philadelphians had scored 163, Glies taking the best care of the spot. At 3.15 P.M. St. Georges commenced what looked to be a very up-hill game, but thanks to Bance, who secured an excellent 5s without a chance. Mooran 33, who once found the ground tog small for him. Mooran is the state of the spot of the state of the secured and the state of the small or him. Works. Mooran 33, who once found the ground too small for him; Moore, 17 in his usual style, and Glies II, victory ddi not hover far out of reach. With Cross, Souther and Conver it would have been grasped. Let sucking youngstors take our tip and note how the game should be played. "Its said those of the hill did held theri game should be played. "Tis said those of the hill did sleld their level best, and toward the close of the game the excitement be-came so intense that a stoutish gentleman who watched the game through one of the cracks in the fence was seen by an outsider to have several terrific fits. The double Bs at last, however, brought the game to a speedy close, as they were too big shot for the home club's tail-end, the last wicket falling for the goodly total home club's care.,

TRADE-64 BEATS THE WORLD."-MARK.

The Only Tobacco Ever Manufactured that does not Bite the Tongue,

"Old Judge" Cigarettes

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, III. by which the rice paper used as wrappers is so prepared that the unpleasant odor and finitrous effects of the OLLO CHESONTE thrown off when burning is completely reut-aligned or destroyed, age and importance of this invention will at once be recognized by all smokers, and its fruth demonstrated by the first "Old Judge" Cligarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have berefore, the monking Cigarettes scales of PURB RICE PAPER, been inhaling one of the deadlitest poissons known. FOR SALE BY ALL DEALERS.

GOODWIN & CO., Manufacturers 207 and 209 Water st. NEW YORK

Shot Gun and Rifle Powders Revolutionized.

Champion Shot Gun and Rifle POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. CaptainBogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

DITTMAR POWDER M'F'G Co..
